JUSTWASHES

Service Area Requirements

Ensuring a safe and efficient environment for your car wash.

To provide the best possible service, please make sure your location meets the following requirements before your wash:

1. Service Area

We serve Metro Atlanta and surrounding areas. Availability is checked by ZIP code when you sign up and when you book — if your ZIP is covered, we can come to you.

2. Water Access

Your technician needs access to water. Let them know where a spigot is in the notes section of your profile. We recommend adding power location as well.

3. Vehicle Access

- The vehicle should be parked on private property (such as your driveway) with safe, legal access for the technician.
- There must be clear access to the vehicle without blocking public streets, driveways, or emergency exits.
- The technician needs enough space to work safely around the vehicle.

4. Safety

- No loose animals should be present on the property during the service.
- The area should be safe and accessible for the technician and their equipment.

5. Vehicle Locking

The vehicle **must be locked** for the duration of an exterior-only wash service. If you are unable to lock the vehicle, the technician may not proceed with the wash for security reasons. Selection of optional interior services don't require the vehicle to be locked.
