

Physical & Wellness Exam Acknowledgment

Changing Health Care for Good.®

A "Physical or Wellness Exam" is a thorough review of your general wellbeing. The physician will perform an examination and make recommendations concerning your preventive health. This may include general recommendations regarding diet and exercise, age appropriate immunizations, and cancer screening exams such as Pap smear tests, prostate exams, and breast exams or screening lab work.

On occasion you may be seen for both a physical and an office visit on the same day. This means that you met the requirements for both types of visits during one appointment. For example, if you schedule a physical but also discuss additional problems/symptoms that require an additional evaluation/management (meds, chronic med refills) or managing chronic illness (HTN, Diabetes, etc.) then you would be billed for both a physical and an office visit.

Your insurance company will determine whether you will be found responsible for a co-pay or deductible amount.

Please sign below to confirm you understand you may be billed for an office visit with your physical exam if both are completed during your visit today.

Please feel free to ask if you have any questions.
