Engine

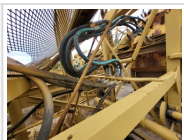

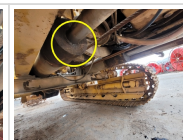

Engine Data Plate				
Engine Compartment				
	 <p>Possible leak at water pump weep hole.</p>		 <p>The bottom side of the radiator is disconnected from the engine.</p>	 
Engine Type (Make, Model, Cylinders, Hp)	N/A			
Engine Overall Comments	The engine fired up and sounded okay. A few signs of fluid leaks were seen.			

Drivetrain Components

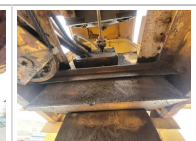

Drivetrain Photos					
					
Drivetrain Comments	The machine traveled okay in both directions. The machine was ONLY tested in short speeds and in short distances.				

Hydraulics

Direct To Auction Form

<p>Hydraulic Pump/Fittings/Hoses/Cylinders/Pins</p>					<p>Hydraulic cylinder rod seals have signs of fluid seepage.</p>
<p>Hydraulic System Comments</p>	<p>The front wheel lift/lower circuit was functioning. The wheel was also spun in both directions and worked okay. The pumps sounded okay during operation.</p>				

Chassis

<p>Chassis Photos</p>					
<p></p>					
<p>Comments</p>	<p>The main frame was in descent shape. Some cracks were seen around the front frame to the trencher wheel assembly. Further inspection to determine the exact locations of the cracks is recommended. No major obvious cracks were observed.</p>				

Underbody Inspection Points

<p>Underbody Photos</p>				
<p>Underbody Comments</p>	<p>The underneath of the machine was okay with normal wear for its age. Some signs of minor leaks were present and no major obvious issues were observed.</p>			

Attachments

<p>Attachment Photos</p>		
<p>Attachment Comments</p>	<p>The front attachment was in descent shape with normal wear seen.</p>	

Functionality Assessment

<p>Is this machine operable?</p>	<p>Yes</p>
<p>Video - Operational or 360</p>	<p>Click to Download</p>
<p>Comments</p>	<p>The machine fired up and it was functioning okay. The machine traveled in both directions and the trencher wheel was also operating okay (in both directions) in slow speed.</p>
