Richland Creek Reservoir Water Supply Program June 2017

Raw Water Pipeline Complete!

Key members of the project team recently joined together to commemorate the successful completion of the Raw Water Pipeline portion of the RCR Water Supply program. This is the first portion of the program construction to be finished, and it was completed ahead of the required schedule and within the budget. The pipeline passed its pressure test and will remain in place until the work at the River Intake and Reservoir are completed and piping on those projects is installed to connect to the pipeline. Once operational, the River Intake will pump water from the Etowah River through the Raw Water Pipeline about 3.5 miles to fill the new Richland Creek Reservoir. Congratulations to the entire team!

**The Richland
Creek Reservoir
(RCR) is a
new 305-acre
reservoir that once
completed, will
supply over three
billion gallons of
drinking water to
existing and future
populations in and
around Paulding
County.**
