

Ballistic Imager

The world's fastest forensic imaging tool

The best solution for rapid acquisitions, this tool can copy **1TB of data in as little as 8 minutes**. Its field-proven and unique capabilities offer imaging speeds **4x faster than the average**.

- It is the only patented solution for imaging a hard drive using multiple collection devices, bypassing the hardware limitations that come from acquiring data using a single port. Once the data has been collected, it's seamlessly stitched together so further analyse can be conducted within Detego® Analyse.
- The software can be licenced to removable storage devices, providing a pocket-sized acquisition tool perfect for frontline agents.
- Features an intuitive interface that's easily operated by non-technical users within a quick 30-minute training overhead.

Field Triage

Rapid field-based digital forensics

A portable digital forensic solution for field-based investigators to acquire and act on data captured from PCs, laptops and servers.

- The intuitive triage functionality within this tool automatically alerts the investigating officer of any suspicious items through a Red, Amber and Green status alert. This visual confirmation allows the user to determine the severity of the content or activity contained on the device and determine whether further investigation or arrest is necessary.
- With this tool you can scan a target device and acquire a list of all of the usernames and passwords used on it in **less than 30 seconds**.

Media Acquisition

Rapid automated media acquisition

Rapid, automated and simple-to-use, this feature-rich acquisition tool can extract data from USB devices and other removable media (such as SD cards, micro SD cards, portable external drives, IDE and SATA drives, CD, DVD, Blu-ray etc.).

- Speed up the investigative process by simultaneously forensically imaging and analysing multiple removable media devices at once.
- Automatically match incoming data against a set of pre-defined keywords, hash lists and other analytical processes.
- 'Plug-and-play' deployment option places an extremely powerful exploitation tool into the hands of non-technical users.

MD Powered by HANCOM

Advanced mobile phone physical extractions

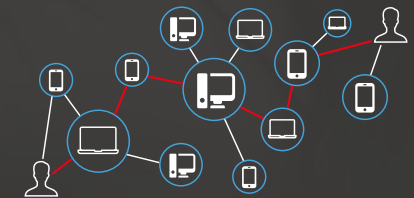

Detego-MD combines Hancorn's leading data extraction and decryption capability with Detego® Analyse's robust analytics, automation and reporting via a seamless integration.

- Supports 15,000+ phone models.
- Supports 1,500+ apps.
- iOS support including backup file decryption and keychain extraction.
- Extraction of mobile devices, IoT, smart TVs, drones and more.
- Supports multiple physical extraction methods.
- Physical extraction of Samsung S7/S8/S9 up to Android 9.0.

Fusion

Uncover hidden links between exhibits

This tool uses advanced link analysis to build a detailed intelligence picture of exhibits, suspects and cases, helping investigators discover valuable connections between previously unassociated people, places and devices.

- This works across all digital exhibits including computers and laptops (Windows, Apple Mac and Linux systems), smartphones, tablets, cloud storage services, USB devices and other removable media (such as SD cards, portable external drives, IDE and SATA drives, CD, DVD and Blu-ray).
- Its easily navigable interface features numerous pre-configured variables like GPS coordinates, HASH matches and EXIF data.
- The advanced analysis process can be automated, saving time and making it easy-to-run for non-technical users.

Detego Modules

Analys

Detego® Analyse is the central hub for analysis and reporting on all acquired data. The Analytical processes extract maximum intelligence using bespoke automated workflows.

Object Detection: Identify over 9,000 specific items including weapons, drugs, passports and vehicles as well as more abstract objects.

Username and Password Extractor: Rapidly acquire all the usernames and passwords used on a target device in less than 30 seconds.

Advanced Metadata Intel: Gather EXIF metadata including original image capture time, phone or camera model and geographic location.

Picture and Video Analytics: Use advanced PhotoDNA technology to identify similarities between images with slight alterations.

Centralised Case Management: With a central portal you have complete control, allowing you to push down updates, license and control user access rights and monitor key statistics.

Find the right Detego® Package

Detego® Suite Standard: Including Field, Media Acquisition, Covert, Boot, DFMD, Fusion and Analyse.

Detego® Suite Pro: Including Field, Media Acquisition, Ballistic Imager, Covert, Boot, DFMD, Fusion and Analyse.

Detego® Suite Ultimate: Including Field, Media Acquisition, Ballistic Imager, Covert, Detego-MD, Boot, Fusion and Analyse.
