

# Product Overview

## PiggyBack

PiggyBack is the easiest way to add 4 additional stations to expand any controller. It can operate independently or be automatically activated when your existing controller has finished watering. PiggyBack is the most economical solution to upgrading larger controllers and prevents the need and complications of adding additional controllers.

### Why you need it?

To expand the capacity of your existing controller

- Easily add up to 4 stations to operate additional valves without purchasing larger controllers

To replace malfunctioning stations on your existing controller

- When controller stations malfunction, use PiggyBack in place of failed stations

### Benefits

### Features

- Easily upgrade or repair your irrigation controller
- Economical alternative to purchasing larger controllers
- Use PiggyBack to separate sprinkler and drip lines to water concurrently (greatly reduces watering times)
- Built to last using the highest quality materials
- One year full replacement warranty against defects
- Free U.S. based phone and online support
- Engineered for best in class durability and longevity
- Made in the USA
- Add 4 stations to any 24VAC controller (including modular)
- Easily set watering times up 4 hours per station
- No programming required
- Simple one button operation for manual start and station advance
- Easy to install and use
- Overbuilt by design for long service life
- Outputs up to 2 Amps per station to valves
- Ability to repeat program for continuous watering (ideal for new lawn or groundcover)
