1 Figures shown are for comparability purposes; only compare fuel consumption and CO<sub>2</sub> figures with other vehicles tested to the same technical procedures. These figures may not reflect real life driving results, which will depend upon a number of factors including the accessories fitted (post-registration), variations in weather, driving styles and vehicle load. Data correct at 1.9.2022. Figures quoted are for a range of configurations (including non-UK) and are subject to change due to ongoing approvals/changes. Please consult your authorised Volkswagen Van Centre for further information.

RDE2 refers to Real Driving Emissions Step 2.

Volkswagen Commercial Vehicles is currently working on further developing the Crafter. Due to the current supply situation with semiconductors and the existing order bank, we cannot deliver Crafter models ordered now before the second quarter of 2024. According to our current plans, we will already be producing the further developed version of the Crafter at this time. As a result, we will not be able to deliver the vehicle illustrated in the configurator, or described in the contract at the time of order. The vehicle supplied will be the further developed model of the Crafter instead. The WLTP (Worldwide Harmonised Light Vehicle Test Procedure) consumption and range of the new Crafter are not yet available and may deviate from the currently stated value for the existing model. Please contact your Van Centre for more information as and when it becomes available.
