DS 9 E-TENSE

## DS 9 E-TENSE

### PLUG IN HYBRID

ENJOY THE BEST  
OF BOTH WORLDS  
WITH DS 9 E-TENSE

#### A new generation of mobility

Enjoy a remarkable driving experience with our E-TENSE plug-in hybrid technology. Uniting flexibility with dynamism, the combination of electric and petrol delivers thrills as well as comfort. Fitted with an E-TENSE powertrain, the CO<sub>2</sub> emissions are from just 22g/km.

E-TENSE models enjoy lower road fund licence charges and Benefit in Kind taxation charges for company car drivers.

*CHARGING SOLUTIONS*

## CHARGE DAILY, DRIVE 100% ELECTRIC

Charging is a necessity to make the most of your electric or plug-in hybrid car. When you're not using your car, it only takes a few seconds to plug it in and charge it. We recommend you charge your plug-in hybrid car every day to take full advantage of driving electric.

FORMULA E

## DS AUTOMOBILES DOUBLE WORLD CHAMPIONS IN FORMULA E

**Formula E** is a 100% electric single-seater championship recognised by the International Automobile Federation, the first race of which took place in 2014. Engaged in Formula E since 2015, DS Automobiles has made its mark on the history of the sport with two double titles (Teams and Drivers) in 2019 and 2020 with an impressive number of victories and podiums. Today, DS still stands out as the most rewarded brand with a record number of points scored since the creation of the championship. This season, DS is associated with Penske Autosport within the DS PENSKE FORMULA E TEAM.

### Why is DS Automobiles involved in Formula E?

“From Track to Road”

Motorsport is a real laboratory for DS Automobiles. It makes it possible to test in extreme conditions technologies that could be used in the development of our road cars. The competition allows technology transfer between single-seaters race cars to our electric and plug-in hybrid models. The E-TENSE 4x4 360 engine is a great example of this, developed by DS PERFORMANCE, this high performance powertrain can be found in both DS 7 and DS 9.

Furthermore, having a DS Automobiles team in Formula E aligns perfectly with the brand strategy of launching vehicles of electric propulsion exclusively from 2024.

\* From January 2019 all models are Type Approved according to Worldwide Harmonised Light-Duty Vehicles Test Procedure (WLTP). WLTP is the new official test regime and replaces the New European Driving Cycle (NEDC). The CO<sub>2</sub> data has been converted from WLTP back to NEDC-equivalent values in accordance with current vehicle tax and Company Car Tax (CCT) legislation. Two values for CO<sub>2</sub> are shown per version, these are the 'Vehicle High' (1) value and the 'Vehicle Low' (2) value. For transparency and clarity, the 'Vehicle High' value has been used to calculate the first year taxation in the prices shown above. The actual CO<sub>2</sub> value of a version may vary according to optional equipment fitted but, other than in exceptional circumstances, will be between 'Vehicle High' and 'Vehicle Low'.

For full information, including WLTP fuel consumption data, please see technical specification pages, or refer to your nearest DS retailer.

(1) Vehicle High = High specifications vehicle fitted with maximum available options.

(2) Vehicle Low = Standard specifications vehicle fitted with minimal options.

Please note: an additional annual tax rate applies in years 2 to 6 for vehicles with a list price (which includes basic price, VAT, delivery cost and additional options) in excess of £40,000.

Figures quoted reflect a range of configurations (including non-UK market vehicles) and are subject to changes resulting from ongoing product development, range evolutions, testing and evaluations.

The grouped figures shown above show the lowest and highest performing results for this model. Consult your dealer for information on specific examples. The fuel consumption you achieve, and CO<sub>2</sub> produced, in real world conditions will depend upon a number of factors: including the accessories fitted (post registration), variations in weather, driving styles and vehicle load. There is a new test WLTP (Worldwide Harmonised Light Vehicles Test Procedure) used to measure fuel consumption and CO<sub>2</sub> figures. These CO<sub>2</sub> figures, however, are based on the outgoing test cycle NEDCeq (New European Driving Cycle Equivalent), calculated using an EC correlation tool which converts WLTP figures to NEDC. These figures are used to calculate tax for first registration. You should only compare fuel consumption and CO<sub>2</sub> figures with other vehicles tested using the same technical standard.
