DS 4 HYBRID

THE FREEDOM OF ELECTRIC MOTORING WITHOUT PLUGGING-IN

Self-charging motor

Equipped with a petrol engine combined with a self-charging electric motor, DS 4 HYBRID offers reduced CO₂ emissions and improved fuel efficiency with up to 15% less fuel consumption on average compared to a petrol engine*

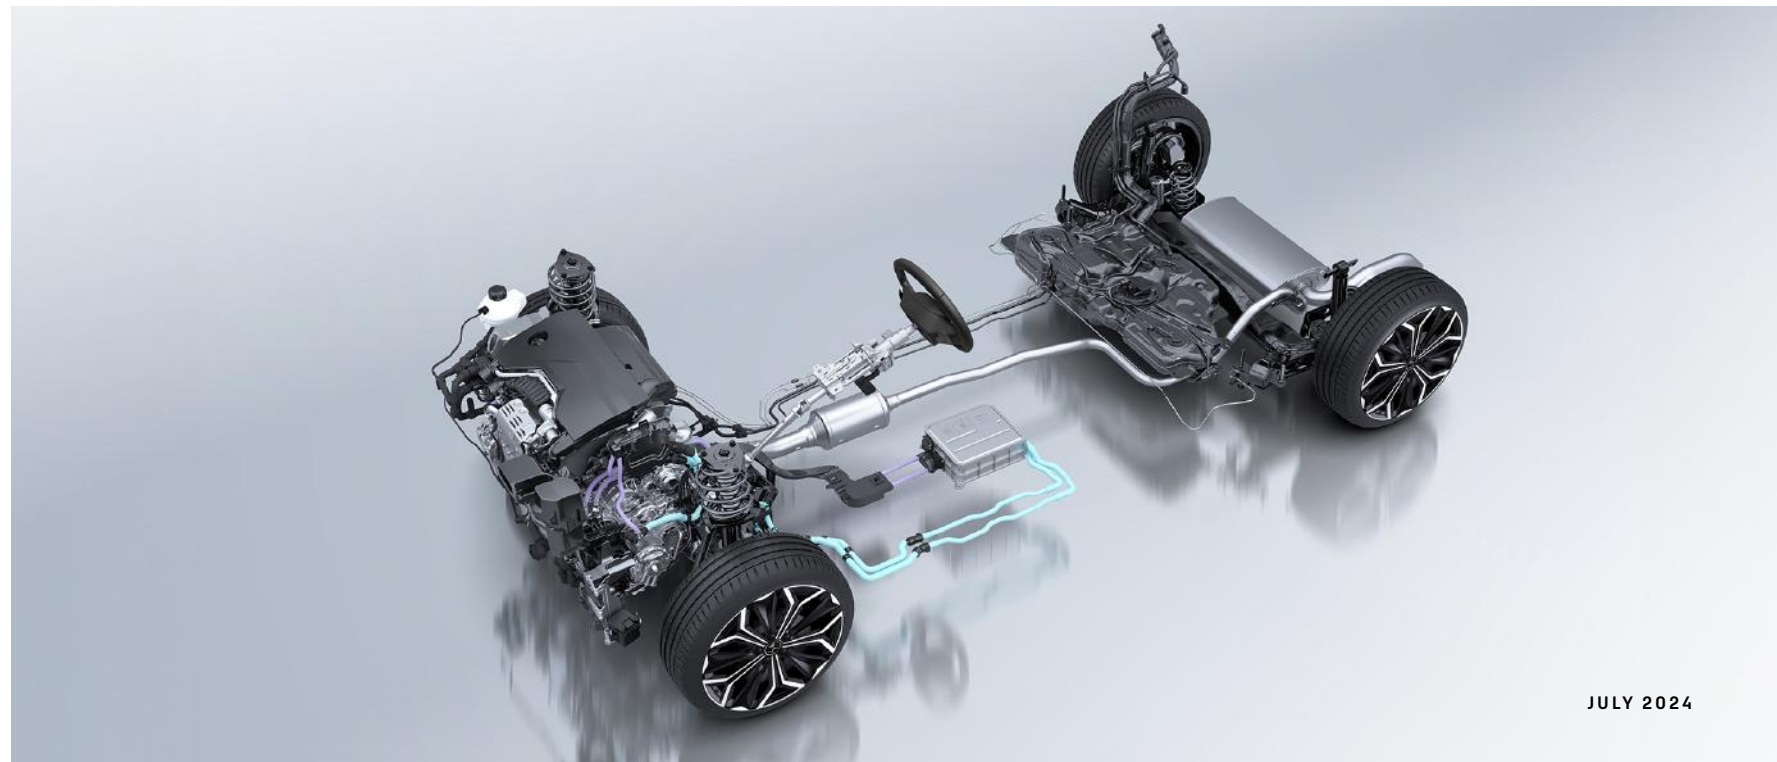

The combustion engine and electric motor work together to optimise energy consumption:

- a petrol engine,
- an electric motor,
- a 48V Li-Ion battery,
- a belt starter and a dual clutch transmission

* Combined consumption WLTP compared with petrol engine equivalent

PLUG IN HYBRID

ENJOY THE BEST
OF BOTH WORLDS
WITH DS 4 PLUG-IN
HYBRID

A new generation of mobility

Enjoy a remarkable driving experience with our plug-in hybrid technology. Uniting flexibility with dynamism, the combination of electric and petrol delivers thrills as well as comfort. Fitted with an E-TENSE powertrain, the CO₂ emissions are from just 28g/km.

PLUG-IN HYBRID models enjoy lower road fund licence charges and Benefit in Kind taxation charges for company car drivers.

DS 4 PLUG-IN HYBRID

CHARGING SOLUTIONS

CHARGE DAILY, DRIVE 100% ELECTRIC

Charging is a necessity to make the most of your electric or plug-in hybrid car. When you're not using your car, it only takes a few seconds to plug it in and charge it. We recommend you charge your plug-in hybrid car every day to take full advantage of driving electric

FORMULA E

DS AUTOMOBILES DOUBLE WORLD CHAMPIONS IN FORMULA E

Formula E is a 100% electric single-seater championship recognised by the International Automobile Federation, the first race of which took place in 2014. Engaged in Formula E since 2015, DS Automobiles has made its mark on the history of the sport with two double titles (Teams and Drivers) in 2019 and 2020 with an impressive number of victories and podiums. Today, DS still stands out as the most rewarded brand with a record number of points scored since the creation of the championship.

This season, DS is associated with Penske Autosport within the DS PENSKE FORMULA E TEAM.

Why is DS Automobiles involved in Formula E?

“From Track to Road”

Motorsport is a real laboratory for DS Automobiles. It makes it possible to test in extreme conditions technologies that could be used in the development of our road cars. The competition allows technology transfer between single-seaters race cars to our electric and plug-in hybrid models. The E-TENSE 4x4 360 engine is a great example of this, developed by DS PERFORMANCE, this high performance powertrain can be found in both DS 7 and DS 9.

Furthermore, having a DS Automobiles team in Formula E aligns perfectly with the brand strategy of launching vehicles of electric propulsion exclusively from 2024.

* From January 2019 all models are Type Approved according to Worldwide Harmonised Light-Duty Vehicles Test Procedure (WLTP). WLTP is the new official test regime and replaces the New European Driving Cycle (NEDC). The CO₂ data has been converted from WLTP back to NEDC-equivalent values in accordance with current vehicle tax and Company Car Tax (CCT) legislation. Two values for CO₂ are shown per version, these are the 'Vehicle High' (1) value and the 'Vehicle Low' (2) value. For transparency and clarity, the 'Vehicle High' value has been used to calculate the first year taxation in the prices shown above. The actual CO₂ value of a version may vary according to optional equipment fitted but, other than in exceptional circumstances, will be between 'Vehicle High' and 'Vehicle Low'.

For full information, including WLTP fuel consumption data, please see technical specification pages, or refer to your nearest DS retailer.

(1) Vehicle High = High specifications vehicle fitted with maximum available options.

(2) Vehicle Low = Standard specifications vehicle fitted with minimal options.

Please note: an additional annual tax rate applies in years 2 to 6 for vehicles with a list price (which includes basic price, VAT, delivery cost and additional options) in excess of £40,000.

**Official Government test fuel consumption figures

***Please note: the maximum plated weights must not be exceeded

Figures quoted reflect a range of configurations (including non-UK market vehicles) and are subject to changes resulting from ongoing product development, range evolutions, testing and evaluations.

The grouped figures shown above show the lowest and highest performing results for this model. Consult your dealer for information on specific examples. The fuel consumption you achieve, and CO₂ produced, in real world conditions will depend upon a number of factors: including the accessories fitted (post registration), variations in weather, driving styles and vehicle load. There is a new test WLTP (Worldwide Harmonised Light Vehicles Test Procedure) used to measure fuel consumption and CO₂ figures. These CO₂ figures, however, are based on the outgoing test cycle NEDCeq (New European Driving Cycle Equivalent), calculated using an EC correlation tool which converts WLTP figures to NEDC. These figures are used to calculate tax for first registration. You should only compare fuel consumption and CO₂ figures with other vehicles tested using the same technical standard.
