

Operating Instructions

For the Swirl-Fire™ Collection of Fire Pits

Using Venturi Flame™ Technology & Gel Fuel

Read these instructions carefully for correct operation of your new table-top fire pit. Our **Swirl-Fire Collection** of fire pits run on clean-burning gel fuel. By simply adding our Venturi Flame top, a stunning swirling fire appears. No valves, no fans, no problems!

IMPORTANT STEPS TO FOLLOW DURING SET-UP

Figure 1.1

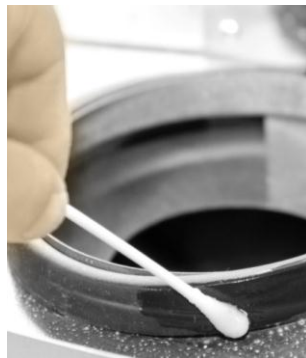

Figure 1.2

Figure 1.3

Figure 1.4

Note: Model above shown with optional cool temp safety glass shield

1. Remove all packaging items including any residual packaging on the glass using glass cleaner and paper towels.
2. Place *gel fire container* on a secure, stable table or platform
3. Secure to desired surface using one of the following methods.

DO NOT OVERTIGHTEN FASTENERS

- For wood and other soft surfaces, insert a long screw through base and into surface.
- Insert 1/8" bolt through base and surface, secure with nut and/or washer from bottom.
- If installing on a table with an open umbrella hole, a toggle bolt drywall anchor can be used. Insert bolt through hole in base and umbrella hole, screw on anchor. If anchor is not wide enough, use a large washer on bottom side of table.

To order an installation kit, see chart at right for help selecting the appropriate kit for chosen surface.	Install Kit	For Use With	Item Code
	Screw, washer	Wood, Soft surfaces	INST-SCREW
	Nut, 1/8" bolt, washer	Hard surfaces	INST-BOLT
	Toggle bolt, washer	Table with umbrella hole	INST-TOGGLE

4. To ease installation of glass cylinder, wet a cotton swab and wipe entire outside of silicone ring before gently sliding cylinder onto base. (see *Figure 1.2*)

WARNING

Never attempt to force the glass onto base. Always wear clean leather gloves when handling and installing glass.

5. Remove the label from the *gel fuel* can.
6. Remove the can lid and place the can in the *gel fire container*.
7. Ignite the gel fuel with a wand lighter or long match and allow the gel to burn for 5-10 seconds (see *Figure 1.3*).
8. Place the turbo disc assembly (glass cylinder and base) on top of the base and make sure it is securely in position (see *Figure 1.4*).

Operating Instructions (cont.)

Extinguish Flame Options

Allow to Burn out

- Allow to burn until the gel fuel is gone and flame is out (1 – 1 1/2 hours).

To Extinguish Flame

- Use gel snuffer with extended handle to extinguish.

After extinguishing, wait **at least** 10 minutes before removing top assembly and replacing can lid securely.

CAUTION

Allow time for the can to cool before touching. **Can will be HOT!**

Always replace the gel can lid when not in use.

Re-lighting Gel: Make sure the gel can has cooled down and then gently stir gel. The gel will form a film on the top over time and will not burn properly unless stirred prior to re-lighting.

WARNING AND SAFETY TIPS DURING OPERATION

- Always have a Fire Extinguisher nearby when any flame is present.
- Never pour additional fuel into burning or hot gel can. This could cause serious injury.
- **Do Not** touch glass when flame is burning or shortly after extinguishing.
- Allow a minimum of ten minutes for glass to cool before handling.
- Never move the product while burning
- Never leave children unattended near unit during operation.
- Hairline heat-stress cracks may appear over time. These are normal and do not effect safety of the unit. If cracking is severe or deep, replacement is required.

Indoor Operation: *Gel fire container* must be secured in position. When burning, this product generates about 9,000 BTU's per hour. It generates water vapor and carbon dioxide. If the product is operated in a small room or confined space, it may be necessary to open a window while operating to reduce humidity and manage room temperature.

Warranty: Your Venturi Flame is covered under a 1-year manufacturer's warranty. Please visit <http://www.outdoorrooms.com/warranty-form> to register your product.
