

RANDI-LINE ® DESIGN

made by architects

Randi's history goes back to 1878 when "Dørgrebsfabrikken" at Randers began manufacturing cast metal handles for the building industry.

Our series of lever handles have been developed in collaboration with leading Danish architects, and they are recognised by professionals throughout the world for their technical and aesthetic quality - and their timeless, elegant Scandinavian design.

Since the beginning, Randi's design philosophy has been: Simplicity and flexibility. To create the best possible function in the most suitable material using the simplest possible expression.

Randi-Line® 1060 - C.F. Møller Architects

C.F. Møller Architects is one of Scandinavia's oldest and largest architectural practices. The collaboration with C.F. Møller Architects began in the mid-eighties with the construction of "Skejby Hospital". A whole new series of lever handles and trim was designed for the project.

This timeless series, with the lever handle 1060 as flagship, and the matching escutcheons and backplates, has become a real classic in the Randi-Line® range. Available in stainless steel and brass.

Randi-Line® Komé

C.F. Møller Architects

Architecture, function and ergonomics are the foundations of a new and exciting series of trim, Randi-Line® Komé, designed by C.F. Møller Architects and representing a serious contender for a modern classic, with the familiar Randi quality.

Randi-Line® Komé is a complete series of lever handles, thumb turn, escutcheons and backplates.

Available in stainless steel and brass.

Randi-Line® Komé RAW

C.F. Møller Architects

Komé RAW is a variant of the original Randi-Line® Komé lever handle. This “raw” and unground version of the lever handle fits perfectly in buildings with a rough or “industrial” expression.

Komé RAW can be used in combination with the existing roses and backplates from the Randi-Line® series, fx with a painted finish - an impressive contrast to the raw finish of the lever handle.

Komé RAW is available in stainless steel and brass.

Randi-Line® Square

Friis & Moltke Design

Friis & Moltke are noted within the design world for their all-round attention to detail, often in stark contrast to more traditional designs within the sector.

Randi-Line® Square is a combination of satin stainless steel and black composite - an impressive contrast in material and finish. Randi-Line® Square is a range of lever handles, escutcheons and backplates meeting the demands of modern building.

Randi-Line® Grata

Friis & Moltke Design

“Grata” means welcome, and its welcoming appearance is the main feature of Friis & Moltke’s Grata lever handle. A vital detail for a lever handle.

The handle features a unique mix of materials, making it possible to create harmony with the interior of the building. The Grata lever handle is available in three variants: Stainless steel, stainless steel with oak or stainless steel with black POM.

Randi-Line® 1040

Architect Jørn Schütze

Jørn Schütze designed the classic Randi-Line® thumb turn, for use on all escutcheons and backplates in the Randi-Line® series. The thumb turn, in stainless steel or brass, is also available in a smaller variant for narrow profile doors, and a longer variant for people with physical disabilities.

Jørn Schütze has also designed lever handle 1040 with matching window handle, in the same style as the timeless thumb turn.

Classic-Line®

Benedicte & Poul Erik Find / Architects m.a.a.

For the past 25 years, with building history as their area of specialisation, Benedicte & Poul Erik Find/Tegnestuen Hindevadgaard, have carried out renovation of older buildings, churches etc.

The Classic-Line® range was developed for use in older buildings worthy of preservation. Classic-Line® is a comprehensive series of elegant architectural hardware and accessories made from solid, polished brass.
