

Logistics

Supporting Essential Industries

nz.rs-online.com

By your side

Supporting our customers, we're by your side.

High stock levels

\$600m of inventory readily available

Next day delivery

We use a national carrier network to maintain continuity of service

Order online 24/7

We are here when you need us, with up-to-date inventory levels

Product Plus sourcing

Whatever you need however obscure – we can get it

Best in class eCommerce experience

Our RS PurchasingManager® web order management tool & eProcurement solutions can help streamline ordering processes

Protecting our people

People First

Home working wherever possible. In the workplace - managed cells, social distancing, enhanced PPE requirements

By your side

Product Support

At RS we are ready and prepared to support your business.
By your side.

Mechanical power transmission

Conveyors involve many moving parts from motors, gearboxes, rollers, ball transfer units and of course bearings & couplings within the drive systems.

Pneumatics

Often used to operate flaps, guides or paddles which are used to direct the follow of packages around more complex conveyor systems - these need actuators, valves, tubing and connectors.

Lubricants & greases

With lots of moving parts inside conveying machinery and potential 24/7 operation, lubrication and cleaning are vital for continually trouble free operation.

Sensing

All conveyor and logistics handling systems have multiple photoelectric sensors, limit switches and even encoders to ensure the movement of items can be carefully controlled at speed.

Health & Safety

To protect staff, meet legal requirements and to maximise productivity, automated logistics systems use a lot of machinery safety - emergency stops, rope pulls, light curtains - combined with Personal Protective Equipment (PPE).
