## Site Safety and Protection

Security is a key element in the site protection such as warehouses. Due to the interaction between pedestrians, vehicles and goods, there are many risks of accidents such as collisions or falling loads. It is essential to implement protection systems to avoid these risks.

To ensure the safety of people (staff or visitors) and infrastructure (machines, vehicles, racks, etc.), it is essential to identify risk areas and install safety devices to protect the work environment within the company. What protection solutions should be put in place to ensure personnel safety while protecting equipment?

### STAFF:

#### Define traffic path to avoid trolley/ pedestrian accidents.

- Security Barriers
- Safety Mirrors
- Plastic and Steel Posts
- Anti-slip Protections

### EQUIPMENT & BUILDINGS:

#### Protect equipment from impact from forklifts and vehicles.

- Safety Barriers
- Steel Posts

### RACKS AND DOCKS:

#### Protecting infrastructure and reducing risk in collisions.

- Protection Bumpers

# SAFETY BARRIERS STEEL - TO EMBED

Buy this and more at [rspro.com](https://rspro.com)

## Embeddable Railings

RS PRO is proud to introduce this heavy-duty safety barrier. This safety barrier is made from steel, colour coded yellow and black. This barrier is suitable for indoor applications such as restricting access to a specific area, no-go zones and doorways. For outdoor applications, you can find them being used in car parks, as road barriers, impact protection and as railing for steep drops for pedestrians.

The durability of this safety barrier means you can quickly set up permanent area restrictions. This barrier has a featured horizontal crossbar that ensures fantastic impact protection and effective traffic control. This barrier can be attached to the ground with fixings purchased separately or embedded directly into the ground.

## Embeddable Railing Bases

Suitable for securing safety barriers for indoor applications such as restricting access to a specific area, no-go zones and doorways. For outdoor applications, you can find them being used in car parks, as road barriers, impact protection and as railing for steep drops for pedestrians.

The durability of this safety barrier base means you can quickly set up barriers for area restrictions. This base makes the barriers removable and easy to move quickly and safely. This barrier base is ideal for situations such as a docking area for forklifts as it ensures the ease of removal of barriers whilst protecting workers.

## Traffic Barrier

When it comes to traffic control look no further than RS PRO. Here we are proud to introduce this extremely durable, heavy-duty, polypropylene safety barrier that can withstand adverse weather conditions and extreme working environments.

The RS PRO traffic barrier's primary purpose is to act as an obstacle, structure, or fencing that prevents pedestrians from accessing restricted areas and provide visibility to potentially dangerous areas. This traffic barrier is fully adaptable, multiple barriers can interconnect via integrated plugs.

# PROTECTION BUMPERS RUBBER

Buy this and more at [rspro.com](https://rspro.com)

## Impact Protectors

Impact protectors are vital in a workplace where vehicles are reversing, moving heavy loads or parking in high traffic areas that might result in injury or damage to equipment.

For example, having tools and toolboxes attached to walls or walkways for workers or visitors might provide a risk of being hit by reversing vehicles or not seen by forklifts carrying heavy loads and cause damage. These rubber differences soften potential impact and lessen the chance of injury.

## Bollards/Posts

This heavy-duty security post from our RS PRO range is a type of safety barrier that cannot be broken or twisted and is produced from polyurethane making it extremely hard-wearing. Ideal for areas where the bollard is likely to get knocked repeatedly at low speeds.

RS PRO has designed these security posts that can be permanently installed with fixings purchased separately to protect an area. With excellent corrosion resistance these bollards are ideal for even harsh environments. They are particularly good in areas where there are slow-moving vehicles and high pedestrian traffic that needs crowd control.

## Bases for Bollards/Posts

This security base post from our RS PRO range is a type of base designed for safety barriers to be fixed into the ground and easily removed making the bollards temporary rather than permanent fixtures.

RS PRO has designed these security post bases that can be permanently installed so that the post can be made to be removable, once removed the base can have the box closed meaning there is no hole in the ground. They are particularly good for car parking spaces or loading bays that need access at certain times of days but only by authorised personnel and vehicles.

## Mirrors

The dome shaped mirrors which, are also known as “convex” are designed to reflect a wider angle view of an area and exposing more of a view for those viewing the mirror. They are usually fixed to a wall, at an angle with the appropriate bracket. These are available in circular convex, full dome convex, half dome convex, quarter dome and rectangular shape. These type of safety mirrors are often put in places where a person needs to see around a corner, or to view a difficult or blind spot.

Rectangular Outdoor Safety mirrors are typically shatterproof, waterproof and are generally quite robust. They can be mounted to a wall or surface with a security bolt.
