「FROM CLEAN TO CARE」

CARING FOR PEOPLE NOT JUST WORKERS

At SC Johnson Professional we help companies care for their workers as much as they care for their customers. We also believe that “care” does not involve just cleanliness.

WHAT IF WE COULD WORK TOGETHER TO IMPROVE FOOD SAFETY WHILE TAKING CARE OF YOUR EMPLOYEES?

Every year in Europe, more than 23 million people fall ill from eating contaminated food, resulting in 5000 deaths¹. Employees' hand hygiene is key to reducing the risk of cross-contamination in every step of the chain from production to plate. This means keeping a high standard of cleanliness and enforcing it strictly. Cross-contamination and skin dermatitis outbreaks can disrupt production: brands & companies can suffer serious, irreversible reputational damage that comes with its own costs.

However, making effective high-quality products isn't enough. Thanks to over 80 years of experience in professional skin care, we know that food safety workers are more inclined to use the products if they're pleasant and if they have proper training and educational tools.

That's why our expertise is not only focused on simply taking care of the skin, but also on supplying highly effective formulations complying to all latest European standards with a broad spectrum of efficacy, a specific range of products designed for sensitive skin, easy-to-use dispensers and a complete educational toolkit.

Our solutions naturally encourage compliance, which reduces risk of cross-contamination for the food processed in your facility while also promoting good skin health for your workers. By choosing us, you choose an expert in hand hygiene solutions for your environment.

CROSS-CONTAMINATION IN THE FOOD INDUSTRY - AN INVISIBLE THREAT

In
89%
of contaminated food outbreaks, pathogens were transferred to food via workers' hands²

AT ANY ONE TIME
39%
of staff do not wash their hands after visiting the lavatory, while 53% do not wash their hands before preparing food³

Food recalls cost companies an average of
£8.6 MILLION
in direct costs alone⁴

¹The burden of foodborne diseases in the WHO European region, World Health Organization 2017.

FOCUS ON FOODBORNE PATHOGENS

The following pathogens are identified as being the main causes of concern for the food industry¹.

1 | *Campylobacter*²

What is the resulting illness?

Campylobacteriosis is transmitted mainly by ingestion of undercooked contaminated food, mainly poultry and sometimes pork. In addition, cross-contamination by handling and washing contaminated food can lead to the spread of campylobacter onto hands, work surfaces, clothing and cooking equipment.

Primary pathogens

Campylobacter jejuni and *Campylobacter coli*

Preventative measures

- Follow good hygiene practice when handling, washing, storing and cooking food.
- Systematically wash your hands with clean water and soap after contact with raw and uncooked food, and before meals, breaks and at the end of the working day
- Thoroughly clean work surfaces, cooking equipment and clothing that come in contact with raw food
- Ensure poultry and other at-risk meats are cooked thoroughly.

2 | *Listeria monocytogenes*²

What is the resulting illness?

Listeriosis is a rare but serious notifiable disease transmitted to humans through food.

Primary pathogens

The *Listeria* bacteria, mainly *L.monocytogenes*, and more rarely *L.ivanovii*, naturally present in the environment.

Preventative measures

- Rinse raw produce thoroughly before consuming them
- Wash hands, knives, counters and cutting boards before and after handling/preparing uncooked food
- Ensure that raw food is thoroughly cooked.

3 | *Salmonella enterica*²

What is the resulting illness?

Salmonellosis is a disease caused by *Salmonella* bacteria. *Salmonella* is present in the intestines of animals and can contaminate the environment via their faeces. *Salmonella* is resistant to cold but killed by heat. Raw food is the most frequently contaminated: meat (especially poultry), eggs, and raw or undercooked egg preparations.

Primary pathogens

These are the *Salmonella enterica* bacteria, of which there are many varieties; the well known are *Salmonella typhi*, *Salmonella typhimurium* and *Salmonella enteritidis*.

Preventative measures

- Wash your hands (with water and soap) systematically:
 - After contact with animals, waste, or animal faeces.
 - Before meals, breaks, at the end of the working day.

4 | *Escherichia Coli (E.coli)*²

What is the resulting illness?

Escherichia coli (E.coli) is a family of bacteria, some of which are naturally present in the human gut without causing harm, while others can cause serious food-borne illnesses (FBD).

These infections, while usually not serious, can sometimes develop into haemolytic uraemic syndrome, which is rare but dangerous for children, especially those under five years of age.

Primary pathogens

These infections are caused by the ingestion of pathogenic *Escherichia coli*.

Preventative measures

- Careful hand washing after using the toilet, and also before handling food.
- Hand washing after handling raw meat or vegetables and cleaning work surfaces that come into contact with raw food is essential in preventing cross-contamination between raw and cooked foods.

HELP PROMOTE SKIN HEALTH & HYGIENE COMPLIANCE

REDUCE THE RISK OF CROSS-CONTAMINATION AND RECALLS

- A fully dedicated range from protective creams, biocidal hand wash, non-rinsed sanitisers and moisturising creams developed specifically for the food industry. Our products promote good skin health before, during and after working hours.
- A unique range with hygienically sealed cartridges, answering to all your skin care needs:
 - a wide biocidal range reducing the spread of micro-organisms including innovative antimicrobial actives
 - high quality formulations meeting all latest European standards

TAKE CARE OF YOUR WORKERS

We offer a dedicated range designed for sensitive skin:

- **Perfume-free and dye-free** - designed for people who are sensitive to perfumes and dyes and who prefer products which do not have these added.
- **Skin Hypoallergenic** - dermatologist tested to verify and confirm this product has very low allergenic potential and is designed for sensitive skin.
- **ECARF Certified** - This product meets the European Centre for Allergy Research Foundation (ECARF) criteria for skin tolerability. See <http://Ecarf-siegel.org/en/about-seal>.

IMPLEMENT COST-EFFECTIVE SKIN CARE SOLUTIONS

- Highly efficient products to reduce waste and cost
- Given the frequent occurrence of skin disorders in food industry settings, a robust skin care programme can help minimise the risk of drawn-out compensation claims, costly court procedures and sick leave
- Our foams provide water savings. Using a foam soap compared to a lotion soap² leads to 45% less water needed during hand washing

¹ This product and the dispensers it is to be used with have been certified by HACCP International as being food-safe hand hygiene products suitable for use in facilities that operate in accordance with a HACCP based food safety programme in Food Zone Classification SSZ (Splash or Spill Zone). This means products are suitable for use in food handling areas such as kitchens, production areas and processing areas, but not suitable for coming directly into contact with food or items that will touch food. HACCP International's evaluation and certification is strictly confined to matters of food safety or the operation of a HACCP based food safety programme. Whilst all reasonable care is taken by HACCP International in its evaluation of the product(s) or services(s) described herein, HACCP International does not guarantee that every food safety risk in every application has been identified. No guarantee is offered or implied in the issuing of this statement.

² SCJP sponsored study; Media4Change Ltd., How a Single Change in a Washroom can significantly reduce water consumption and associated costs, 2011.

IMPORTANCE OF PROTOCOLS

Following the right protocols to promote good skin health is key to successful hygiene compliance

DIFFERENT PROTOCOLS INCLUDE:

- Protection cream + Standard handwash complemented with non-rinsed Sanitising + Hydration cream
- Protection cream + Antimicrobial handwash + Hydration cream
- Protection cream + Non-rinsed sanitising only if no water points + Hydration cream
- Protection cream + Antimicrobial handwash complemented with non-rinsed Sanitising + Hydration cream

WHY USE PROTECTION CREAMS

- Make skin quicker and easier to clean with milder hand cleaners
- Help retain natural lipids and moisture in the skin whilst working
- Help improve comfort when wearing gloves
- Help improve grip when using hand-held equipment
- Protect skin against exposure to workplace substances and environmental conditions i.e. ultraviolet (UV) rays or exposure to water-based or oily contaminants

WHY USE APPROPRIATE HAND CLEANERS

- Proper hand cleaning using the appropriate product helps remove germs and prevents physical contaminants from becoming ingrained in the skin
- Using hand cleaners that are too heavy for what's required can be harsh on the skin
- Using hand cleaners that are too light for what's required can lead to over scrubbing and not fully clean skin

WHY USE HAND SANITISERS

- When hands are physically clean, but need to be hygienically clean
- Can be used without water at the point of use
- Help keep the skin in good condition, even after frequent use.
- Provide broad spectrum antimicrobial activity against many common germs

WHY USE RESTORE CREAMS

- Supports the skin's natural barrier
- Makes the skin feel smooth and supple
- Helps to maintain the skin in good condition keeping it strong and healthy, avoiding dryness

3 UNIQUE PROGRAMME ELEMENTS FOR FOOD PROCESSING

PRODUCTS

A LEADING RANGE OF SPECIALIST OCCUPATIONAL SKIN CARE PRODUCTS

PROTECT

Skin protection creams that are applied before working to reduce contact with contaminants and make cleansing quicker and easier **1**

CLEANSE

An extensive range of hand and body cleaners to match the type of contamination encountered **2**

SANITISE

High efficacy hand sanitisers that can be used without water to reduce the risk of spreading germs **3**

RESTORE

Dedicated skin hydration creams for application after working to moisturise, nourish or condition work stressed skin **4**

Stokoderm®
Skin protection creams for water-based contaminants, multiple contaminant types or specific work environments

Foams
Washroom foam soaps and shower products

¹Use biocides safely. Always read the label and product information before use.

HACCP INTERNATIONAL CERTIFICATION

HAZARD ANALYSIS CRITICAL CONTROL POINT

HACCP International is a leading food safety organisation, that operates an assessment and certification scheme for equipment, products and services used within the food industry.

Our products and dispensers that are certified by HACCP International are food safe hand hygiene products suitable for use in the food industry in accordance with a HACCP-based food safety programme.

What is 'HACCP' and how does food industry use it?

- HACCP is an internationally recognised management system for assessing and managing food safety risks for the food industry to produce safe food.
- The system is used by food processors/manufacturers to ensure they produce and handle food safely to meet the high standard required.
- The methodology underpins quality systems and international food safety standards such as ISO 22000, BRC and SQF.
- Food manufacturers therefore look for ingredients and products from suppliers who have HACCP certification to ensure their ingredients and products are safe too.

The advantages for our customers.

- Non-food products are an important part of a HACCP-based food safety programme.
- The HACCP International's certification gives the assurance that the products have been independently assessed for use in areas where food is handled, such as kitchens, production and processing areas.
- The certificate claims: "HACCP International certifies the hand hygiene products listed (on the certificate) as food-safe are suitable for use in food facilities that operate in accordance with a HACCP-based Food Safety Programme."

The evaluation criteria.

The evaluation of the SC Johnson Professional products was conducted by HACCP International in accordance with Food Safety Standard **FOOD SAFE PRODUCTS** and **SERVICES** for **FOOD BUSINESSES**. 10 key components were reviewed in a defined and consistent assessment process.

1. Materials and Design specifications
2. Non toxicity
3. Contamination risks
4. Ease of cleaning
5. Instructions for use
6. Consequences of error
7. Batch and process controls
8. Claims
9. Packaging, labelling and Marketing Material
10. Contribution to food safety

ABOUT SC JOHNSON PROFESSIONAL

SC Johnson Professional is a leading manufacturer of skin care, cleaning & hygiene products for away-from-home markets

- Part of SC Johnson, a family company at work for a better world led by the Johnson family for five generations
- 1,000 employees across five continents
- Manufactures specialist occupational skin care designed for any professional workplace (from industrial, food processing, healthcare, institutional to hospitality markets)
- Products used in over 80 countries by millions of people every day

SC Johnson Professional's sustainability performance at their Denby, UK site has been awarded a Gold Medal rating for 2022 by EcoVadis, an evidence-based corporate social responsibility (CSR) and sustainability ratings framework designed to measure and report on these factors. The rating puts the professional skin care, cleaning and hygiene solutions provider in the top 5% of peer companies rated by EcoVadis across 160+ countries for its efforts at their Denby, UK site.
