

Electrical Sector Solutions

Volume 12: **Aftermarket, Renewal Parts and Life Extension Solutions**

EATON

Powering Business Worldwide

Energizing a world that demands more.

We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

Discover today's Eaton.

Powering business worldwide

As a global power management company, we help customers worldwide manage the power needed for buildings, aircraft, trucks, cars, machinery and businesses.

Eaton's innovative technologies help customers manage electrical, hydraulic and mechanical power more reliably, efficiently, safely and sustainably.

We provide integrated solutions that help make energy, in all its forms, more practical and accessible.

With 2015 sales of \$20.9 billion, Eaton has approximately 100,000 employees around the world and sells products in more than 175 countries.

Dimensions, Weights and Ratings

Dimensions, weights and ratings given in this catalog **are approximate and should not be used for construction purposes**. Drawings containing exact dimensions are available upon request. All listed product specifications and ratings are subject to change without notice. Photographs are representative of production units.

Terms and Conditions

All prices and discounts are subject to change without notice. When price changes occur, they are published in *Eaton's Price and Availability Digest* (PAD). All orders accepted by Eaton's Electrical Sector are subject to the general terms and conditions as set forth in Appendix 1—Eaton Terms & Conditions.

Technical and Descriptive Publications

This catalog contains brief technical data for proper selection of products. Further information is available in the form of technical information publications and in illustrated brochures. If additional product information is required, contact your local Eaton Products Distributor, call **1-800-525-2000** or visit our website at **www.eaton.com**.

Compliance with Nuclear Regulation 10 CFR 21

Eaton products are sold as commercial grade products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes, under 10 CFR 21. Further certification will be required for use of these products in a safety-related application in any nuclear facility licensed by the United States Nuclear Regulatory Commission.

WARNING

The installation and use of Eaton products should be in accordance with the provisions of the U.S. National Electrical Code® and/or other local codes or industry standards that are pertinent to the particular end use. Installation or use not in accordance with these codes and standards could be hazardous to personnel and/or equipment.

These catalog pages do not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise that are not covered sufficiently for the purchaser's purposes, the matter should be referred to the local Eaton Products Distributor or Sales Office. The contents of this catalog shall not become part of or modify any prior or existing agreement, commitment or relationship. The sales contract contains the entire obligation of Eaton's Electrical Sector. The warranty contained in the contract between the parties is the sole warranty of Eaton. Any statements contained herein do not create new warranties or modify the existing warranty.

Powering Business Worldwide

Eaton is a global leader in power distribution, power quality, control and automation, and monitoring products.

At Eaton, we believe a reliable, efficient and safe power system is the foundation of every successful enterprise. Through innovative technologies, cutting-edge products and our highly skilled services team, we empower businesses around the world to achieve a powerful advantage.

In addition, Eaton is committed to creating and maintaining powerful customer relationships built on a foundation of excellence. From the products we manufacture to our dedicated customer service and support, we know what's important to you.

Solutions

Eaton takes the complexity out of power systems management with a holistic and strategic approach, leveraging our industry-leading technology, solutions and services. We focus on the following three areas in all we do:

- Reliability—maintain the appropriate level of power continuity without disruption or unexpected downtime
- Efficiency—minimize energy usage, operating costs, equipment footprint and environmental impact
- Safety—identify and mitigate electrical hazards to protect what you value most

Using the Eaton Catalog Library

As we grow, it becomes increasingly difficult to include all products in one or two comprehensive catalogs. Knowing that each user has their specific needs, we have created a library of catalogs for our products that when complete, will contain 15 volumes. Since the volumes will continuously be a work in progress and updated, each volume will stand alone. Refer to our volume directory, MZ08100001E, for a quick glance of where to look for the products you need. The 15 volumes include:

- Volume 1—Residential and Light Commercial (CA08100002E)
- Volume 2—Commercial Distribution (CA08100003E)
- Volume 3—Power Distribution and Control Assemblies (CA08100004E)
- Volume 4—Circuit Protection (CA08100005E)
- Volume 5—Motor Control and Protection (CA08100006E)
- Volume 6—Solid-State Motor Control (CA08100007E)
- Volume 7—Logic Control, Operator Interface and Connectivity Solutions (CA08100008E)
- Volume 8—Sensing Solutions (CA08100010E)
- Volume 9—Original Equipment Manufacturer (CA08100011E)
- Volume 10—Enclosed Control (CA08100012E)
- Volume 11—Vehicle and Commercial Controls (CA08100013E)
- Volume 12—Aftermarket, Renewal Parts and Life Extension Solutions (CA08100014E)
- Volume 13—Counters, Timers and Tachometers (CA08100015E)—Available in electronic format only
- Volume 14—Fuses (CA08100016E)—Available in electronic format only
- Volume 15—Solar Inverters and Electrical Balance of System (CA08100018E)

These volumes are not all-inclusive of every product, but they are meant to be an overview of our product lines. For our full range of product solutions and additional product information, consult Eaton.com/electrical and other catalogs and product guides in our literature library. These references include:

- The Consulting Application Guide (CA08104001E)
- The Eaton Power Quality Product Guide (COR01FYA)

If you don't have the volume that contains the product or information that you are looking for, not to worry. You can access every volume of the catalog library at Eaton.com/electrical in the Literature Library.

By installing our Automatic Tab Updater (ATU), you can be sure you always have the most recent version of each volume and tab.

Icons

Green Leaf

Eaton Green Solutions are products, systems or solutions that represent Eaton benchmarks for environmental performance. The green leaf symbol is our promise that the solution has been reviewed and documented as offering exceptional, industry-leading environmental benefits to customers, consumers and our communities. Though all of Eaton's products and solutions are designed to meet or exceed applicable government standards related to protecting the environment, our products with the Green Leaf designation further provide "exceptional environmental benefit."

Learn Online

When you see the Learn Online icon, go to Eaton.com/electrical and search for the product or training page. There you will find 100-level training courses, podcasts, webcasts or games and puzzles to learn more.

Drawings Online

When you see the Drawings Online icon, go to Eaton.com/electrical and find the products page. There you will find a tab that includes helpful product drawings and illustrations.

Contact Us

If you need additional help, you can find contact information under the Customer Care heading of Eaton.com/electrical.

Welcome

Welcome to the latest edition of Eaton's *Aftermarket, Renewal Parts and Life Extension Solutions* catalog (formerly YES catalog). In this fifth expanded edition, you will find increased solutions to extend the life, modernize and upgrade your installed base of electrical distribution and industrial control equipment.

Logo History

The installed base of Westinghouse and Cutler-Hammer® distribution and control equipment can be found everywhere. Whether in an industrial facility such as paper, chemical, pharmaceutical, auto and steel, or commercial installations including universities, hospitals, airports and just about any type of government building; you will find equipment that was manufactured by Eaton or one of its acquired companies.

In some situations due to the age of the equipment, the original nameplate information may be difficult to obtain. This is why the logo history is provided. If all else fails, the logo on the front of the equipment will help you identify when it was manufactured. Knowing this, and the type of product, you can refer to the applicable section of the catalog to find the solutions available to support it.

Eaton

Eaton is backed by more than 100 years of history and experience. This experience has resulted in many innovations in distribution and industrial control products each incorporating leading-edge technology to provide the highest value to our customers. This same technology and engineering expertise is applied to solutions to upgrade existing installed older equipment.

Our engineers and scientists are recognized throughout the industry and around the world as experts in a wide range of disciplines including: photoelectric optical technology, arc interruption, vacuum technology, digital and analog electronics, and communications technology.

The Installed Base

The installed base of electrical distribution and control equipment is a product of the economic changes that have occurred over the last 15 or 20 years.

They could:

- Be operating beyond capacity
- Have higher fault currents because of additions
- Pose major safety issues
- Cause increased unscheduled outages having a direct impact on productivity

It has also been a witness to:

- Reductions in budgets and people resources
- Increases in maintenance intervals
- Decreases in support from the original manufacturer

Where do you go for help?

One Source for All Your Aftermarket Needs

The *Aftermarket, Renewal Parts and Life Extension Solutions* catalog is a reference tool to help you identify existing electrical distribution and control equipment and then provide a wide range of solutions available from Eaton to support it. Regardless of the vintage or the original manufacturer, we can provide solutions that will extend the useful life of your existing equipment.

What's New?

Our catalog has a new name to reflect our membership in the family of electrical solutions catalogs—the *Aftermarket, Renewal Parts and Life Extension Solutions* catalog replaces the former *YES (Your Electrical Solutions)* catalog. It continues to offer cutting-edge engineered life extension solutions—it just has a new look and a new name.

Additionally, as the number of available solutions has grown, so has the catalog. Incorporated in this latest edition are increased capabilities that have been introduced since the last printing in 2003. For example, in order to address ongoing safety concerns, Eaton has engineered the Arcflash Reduction Maintenance System™ and the universal remote power racking system. Also, there are new product offerings in the area of trip unit retrofit kits, low voltage power breakers and medium voltage vacuum replacement breakers, just to name a few. With changes to the molded-case circuit breaker product line, this catalog is simpler to use with an updated replacement breaker cross-reference section. Additionally, automatic transfer switches and power factor correction capacitors are included in brand-new tabs in this edition.

Using the Catalog

You can find information in several ways. **The Table of Contents** in the front and the detailed **Alphabetical Product Index** in the back will refer you to the correct section. The capabilities overview in **Tab 2** highlights various capabilities, and provides the tab number where that capability is listed. Also included in this tab is a pictorial representation of a typical distribution system illustrating the various products and where they can be found.

Catalog Format

Each section of the catalog includes the following elements:

- Product Description
- Product History
- Product History Time Line
- Replacement Capabilities
- Technology Upgrades (where applicable)
- Further Information
- Pricing Information

Where relevant, Additional Information, Customer Required Information, General Information and Support Services are included.

What Does the Shaded Area Mean?

In some sections of the catalog, you will again see tables and text that have been shaded. The shaded areas indicate obsolete or discontinued product, and although the product is no longer manufactured, it is still shown for historical reference. In the molded-case circuit breaker section (**Tab 3**), many of the tables have shaded areas. Although the product is no longer manufactured, cross-reference tables have been developed to provide alternative solutions using current manufactured molded-case circuit breakers. The cross-reference tables begin on **Page V12-T3-115** and are in alphanumeric order, based on style or catalog number of the obsolete or discontinued product.

Eaton's Electrical Business on the World Wide Web

Our *Aftermarket, Renewal Parts and Life Extension Solutions* catalog is designed to be your everyday, at-your-fingertips, at-a-glance reference for our wide range of products and services that support your installed base. But it's just the paper "tip" of the electronic "iceberg" of continuously updated information that you can access, online, anytime.

<http://www.eaton.com>

Eaton

At Eaton, we're energized by the challenge of powering a world that demands more. With over 100 years experience in electrical power management, we have the expertise to see beyond today. From ground breaking products to turnkey design and engineering services, critical industries around the globe count on Eaton.

We power businesses with reliable, efficient and safe electrical power management solutions. Combined with our personal service, support and bold thinking, we are answering tomorrow's needs today. With 2015 sales of \$20.9 billion, Eaton has approximately 100,000 employees around the world and sells products in more than 175 countries. Follow the charge with Eaton. Visit www.eaton.com.

Distribution System

A Commitment to the Installed Base

Our employees are committed to supporting all Cutler-Hammer® and Westinghouse® Distribution and Control equipment, no matter when it was manufactured by Eaton's electrical business, or how long it has been in service. Our dedicated Aftermarket Organization provides products, services and expertise through a focused management team, sales engineers and technicians that work to keep customers' equipment operating.

Eaton also offers multiple solutions to extend the life of other manufacturers' equipment, including modernization, technology upgrades, reconditioning and repair. Support for other manufacturers' equipment include:

- General Electric®
- Square D®
- Federal Pacific®
- ITE®
- Siemens®
- Siemens-Allis™
- Allen-Bradley®
- Allis-Chalmers

Eaton's innovative engineering provides the highest level of life extension to support the industry's installed base, regardless of the original manufacturer.

Replacement Components and Renewal Parts

A full line of replacement components and renewal parts is available for the existing installed base of Cutler-Hammer and Westinghouse equipment. These replacement components and renewal parts are *new*, not used or surplus material. The use of original production tooling, assembly fixtures, and original specifications and drawings guarantees compatibility with existing equipment.

Equipment Modernization and Upgrades

Cutler-Hammer equipment modernization and upgrades can extend the life of your existing equipment. They can economically upgrade Cutler-Hammer and Westinghouse products, as well as those of other manufacturers. These state-of-the-art upgrades are engineered to provide:

- Solutions for obsolete electrical equipment
- New technology for aging equipment
- Retrofit, repair and remanufacturing processes
- Monitoring, protection and control capabilities to your system
- Genuine new replacement components and renewal parts

Breaker Reconditioning and Trip System Upgrades with Arcflash Reduction Maintenance System™

Digitrip™ RMS trip unit retrofit kits are available for Eaton, Westinghouse and other manufacturers of low voltage power breakers. These retrofits will improve circuit protection while increasing breaker and electrical system reliability. See **Tab 17**.

Motor Control Center Bucket Retrofits

Freedom™ 2100, Advantage™ and *IT* replacement starter units can be used to increase the capacity of a motor control center without investing in a completely new assembly. Competitive retrofits and new buckets are also available for other manufacturers' units, using current Eaton technology. See **Tab 14**.

Power Breaker Replacement

New DB, DS, DSII, Magnum™ DS and SPB power breakers are available for replacement, to fill existing cells, or in a cell retrofit package for upgrading existing older low voltage switchgear. These breakers are electrically and mechanically identical to the original vintages of DB, DS, DSII, Magnum DS and SPB breakers. See **Tab 17**.

Switchgear Fluidized Epoxy Bus

Existing switchgear bus can be replaced or returned to our factory, regardless of the original manufacturer for reinsulation, using the custom fluidized epoxy bed process. It is available from 600V to 15 kV for switchgear, bus runs and other equipment. See **Tab 17**.

Medium Voltage Starter Upgrades

Vacuum contactors can be retrofitted or refilled into existing medium voltage air magnetic starters, achieving the benefits of vacuum technology without the expense of a completely new assembly. See **Tab 13**.

Replacement Vacuum Breakers

MVVR (Medium Voltage Vacuum Replacement) breakers provide a means to cost-effectively modernize **existing** air magnetic medium voltage switchgear while further increasing its effective life. See **Tab 17**.

PowerNet

Eaton's Cutler-Hammer PowerNet™ system is designed to manage the power distribution system. This integrated power management system is the ideal tool to help manage energy costs, to troubleshoot power quality problems, and to ensure the reliability and integrity of the electrical distribution system. See **Tab 11**.

Submetering Retrofits

Eaton's Cutler-Hammer IQ Energy Sentinel submetering device can be easily retrofitted on Series C® breakers, or those of other manufacturers, in existing equipment. When combined with the PowerNet system, the IQ Energy Sentinel can now provide submetering at numerous levels of monitoring and energy management. See **Tabs 4** and **10**.

Power Management Products

Eaton's Cutler-Hammer IQ Metering and Protective Relaying products are multifunctional communicating products based on micro-processor technology. They are designed to replace existing electromechanical devices and can be applied at low, medium and high voltage points in the electrical distribution system. These devices offer communications capabilities to link electrical distribution equipment to PowerNet Power Management Software. See **Tab 10**.

Replacement Molded-Case Breakers and Accessories

Circuit breaker replacements and upgrades are designed for use in panelboards, switchboards, motor control centers, control panels, combination starters, individual enclosures, and bus duct plug-in units. See **Tabs 3, 4, 9** and **14**.

SPD System Retrofits

Protect solid-state devices from the damaging effects of transient overvoltages. The Eaton SPD products can be installed in low voltage distribution gear or retrofitted into existing switchboards, panelboards and motor control centers to eliminate the effects of surges before it reaches sensitive equipment. See **Tabs 4** and **17**.

Low Voltage High Resistance Grounding Systems

Type C-HRG provides service continuity by providing a ground path for ground current via resistance that limits current magnitude and includes a means to trace the fault source. See **Tab 16**.

Installation and Startup Services

Installation and startup services can be provided for Eaton equipment, as well as equipment manufactured by other organizations. See **Tab 23**.

Genuine LV Control Renewal Parts

Genuine factory-warranted low voltage control renewal parts are available to support the complete line of Cutler-Hammer and Westinghouse design starters and contactors. Renewal parts include contact kits, coils, overload relays and heaters, to name a few. See **Tab 13**.

Molded-Case Circuit Breakers

Molded-Case Circuit Breaker Family

Product Description

Eaton's molded-case circuit breakers are designed to provide circuit protection for low voltage distribution systems. They are described by NEMA® as "... a device for closing and interrupting a circuit between separable contacts under both normal and abnormal conditions," and furthermore as "... a breaker assembled as an integral unit in supporting an enclosed housing of insulating material." The NEC® describes them as "... a device designed to open and close a circuit by non-automatic means, and to open the circuit automatically on a predetermined overload of current, without injury to itself when properly applied within its rating."

Circuit breakers protect against overloads in conductors and protects against short circuits in connected apparatus such as motors and motor starters.

Circuit breakers are designed for use in panelboards, switchboards, motor control centers, control panels, combination starters, individual enclosures and bus duct plug-in units.

Product History

Originally a Westinghouse Product

The need for molded-case circuit breakers came about in 1918 when numerous applications for electrical motors resulted in a demand for a device that would ensure safe operation and, at the same time, protect electrical circuits.

During this period, individual motors were used for the first time in industrial plants to operate machine tools and in private homes to operate appliances. Plant electricians were constantly changing fuses blown during motor startups because of the lack of properly designed fuses for motor circuit protection. Homes experienced similar problems when electrical circuits were overloaded. Inspectors were concerned about fire hazards because of plug fuses being bridged with pennies and the installation of fuses with too high an ampere rating.

Inspection authorities became involved and

attempted to find a solution to the problem. Meetings with switch manufacturers were initiated in an effort to find a solution. Switch manufacturers were asked to develop a switching device that would interrupt a circuit under prolonged overload conditions. The device would have to be safe, reliable and tamperproof. It should also be resettable so as to be reusable after an interruption without replacing any parts. This search for better circuit protection resulted in many different but unacceptable approaches to the problem. These early meetings and subsequent efforts prepared the groundwork for the eventual development of the molded-case circuit breaker.

After intensive research and development, Westinghouse produced the DE-ION® arc extinguisher for use in large oil circuit breakers. Although too large in its initial form to be practical for small circuit breakers, the arc extinguisher was eventually modified into a usable size. The first compact, workable circuit breaker was developed in

1923 when the modified arc extinguisher was coupled with a thermal tripping mechanism. It was not until four years later, however, that Westinghouse research engineers found the ideal combination of materials and design that permitted circuit breakers to interrupt fault currents of 5000A at 120 Vac or Vdc. One year later, Westinghouse placed the first circuit breaker on the market. Its acceptance was instantaneous.

Since that initial introduction in 1927, Westinghouse continued to be at the forefront of circuit breaker technology with an unprecedented series of circuit protective enhancements and introductions as chronicled below. In 1994, Eaton, another world-class technology leader, acquired the Westinghouse Distribution and Control Business Unit (DCBU) and integrated it with their Cutler-Hammer business unit forming a powerful, new combination, poised to meet the challenges of the next 100 years.

Time Line—Major Product Introductions

Year	Product	1920	1930	1940	1950	1960	1970	1980	1990	1995	2000	2002	Present	
1923	First compact, workable circuit breaker developed by Westinghouse	[Timeline bar from 1923 to Present]												
1927	Westinghouse introduced the first complete circuit breaker line, rated 10–600A, 600V	[Timeline bar from 1927 to Present]												
1939	Along with ordering information and style numbers, the various maximum current ratings came to be known by frame designations: 50A E-Frame 100A F-Frame (non-interchangeable trip) 100A G-Frame 225A K-Frame 600A L-Frame	[Timeline bar from 1939 to Present]												
1970	Motor Circuit Protector (MCP) introduced—first sensitive, low level protection designed specifically for motor circuits	[Timeline bar from 1970 to Present]												
1973	SELTRONIC™ introduced—first molded-case circuit breaker with an electronic trip unit	[Timeline bar from 1973 to Present]												
1979	Current Limit-R circuit breaker introduced—first true current limiting trip unit	[Timeline bar from 1979 to Present]												
1982	Series C® Family introduced—new world-class standard, meeting increasing interrupting requirements without sacrificing compact size	[Timeline bar from 1982 to Present]												
1994	Westinghouse Distribution and Control Business Unit (DCBU) acquired by Eaton, integrated with Cutler-Hammer (the Cutler-Hammer line of molded case circuit breakers was sold when merged with Westinghouse)	[Timeline bar from 1994 to Present]												
1995	OPTIM™ Family introduced—first truly programmable molded-case circuit breaker	[Timeline bar from 1995 to Present]												
2002	Next Generation E125, J250	[Timeline bar from 2002 to Present]												
2004	Series G® First Global Breaker Line	[Timeline bar from 2004 to Present]												

Breaker Identification

Nameplate Data

A circuit breaker is identified by data found on the nameplate.

This includes:

- Catalog number
- Shop order number
- Style number
- Amperage
- Number of poles
- Voltage class
- Temperature rating

In most instances, the catalog number, style number or shop order number will supply enough information to identify the circuit breaker.

However, it is always advisable to obtain all data from the nameplate to facilitate identification.

A **Catalog Number** begins with a series of letters followed by numbers that identify:

- Circuit breaker type
- Number of poles
- Maximum amperage
- **Example:** Catalog number F3020 indicates a Type F circuit breaker, three poles, 20A

A **Shop Order Number** begins with one or two numbers followed by a single letter and four additional numbers.

A shop order number is listed in place of a catalog number and indicates that the circuit breaker was modified at the factory, i.e., addition of a shunt trip, special calibration, etc. **Every shop order number must be researched with the factory to properly identify modifications.** Call your Cutler-Hammer Field Sales office for this information.

- **Example:** 70E2121

Note: Eaton does not recommend replacing a circuit breaker identified by a **Shop Order Number** with a standard “off-the-shelf” circuit breaker without first identifying the modifications. **They may be critical to safe and reliable operation.**

Accessories

Most circuit breaker accessories are mounted internally and are not visible with a quick inspection.

However, because many accessories rely on or supply an external signal, there may be electrical leads exiting the circuit breaker case. Inspect for these leads when obtaining full descriptive information for circuit breaker replacement. Examples of common accessories:

Shunt Trip

Used to remotely trip the circuit breaker using an electrical signal. Typically two wires extend through the case.

Undervoltage Release (UVR)

Trips the circuit breaker when voltage drops below a specified percentage of coil voltage (typically 70%). Typically two wires extend through the case.

Auxiliary Switch

Provides remote indication of the circuit breaker status (open/closed). Typically three wires extend through the case in a single-pole 1A/1B application.

Alarm Lockout Switch

For remote indication of an automatic trip operation. Typically two or three wires extend through the case.

Pre-Series C Breaker with Original Label (Labels updated in 1997)

Series C Breaker with Original Label (Labels updated in 1997)

Vintage Label for Typical SELTRONIC Molded-Case Circuit Breaker

Factory Original Circuit Breakers

Why Insist on Only Genuine, New MCCBs Purchased Through Authorized Distributors?

Eaton defines “New” product as that which has not yet been installed in an electrical circuit, purchased through authorized channels in factory original condition and packaged in unopened Eaton cartons.

- The only way to ensure safe and reliable operation of your system is to use genuine, new, Eaton’s Cutler-Hammer products exclusively. Eaton does not resell the component parts for molded-case circuit breakers, the only way for third-party breaker refurbishers to get parts for the breakers that they are rebuilding is to cannibalize other used breakers or to use counterfeit components. Neither is a very good option for the end user
- In some cases, unauthorized resellers of molded-case circuit breakers have been found to misrepresent used, rebuilt or surplus products. Only products purchased as “new” through authorized channels are covered under the Eaton warranty policy
- There have been instances where third-party refurbishers have rebuilt breakers using the wrong parts, with parts missing or the factory lubrication removed in the cleaning process—any of which may result in devices that may not be depended upon to function properly to protect equipment and personnel

Identifying Genuine, Factory Original Westinghouse Circuit Breakers Manufactured by Eaton

The features on a molded-case circuit breaker that identify it as genuine or counterfeit may or may not be readily apparent. In fact, there may be differences not detectable by an external investigation.

A genuine Eaton brand molded-case circuit breaker manufactured by Eaton will have a serialized bar code unique to the breaker as well as an unbroken seal where the case comes together. This barcode and seal were placed at the factory and ensures the internal integrity of the breaker. If, for any reason the barcode is missing or the seal is broken, do not accept the breaker. (Seal does not appear on interchangeable trip breakers.)

Unbroken Seal

There is a manufacturing date code on the back of genuine molded-case circuit breakers stamped in silver and white. If this coding is missing, it may mean the breaker has been subjected to tampering. Frequently, this date code is wiped off in an attempt to represent the breaker as new.

Manufacturing Date Code

Another way to tell if a breaker has been tampered with is to examine the sealant used to cover the screws on the top rear of the breaker. If the sealant appears sloppy or is missing, it indicates that the unit may have been subjected to tampering.

Sealant Used to Cover Screws

A UL® label on a genuine Westinghouse breaker is either exactly as shown in the photo or is stamped in white ink onto the frame in older pre-Series C breakers. Anything other than this may indicate fraud.

UL Label

If front cover screw shows marks from use, someone has attempted to open the breaker. The front covers are either black or gray on genuine Westinghouse molded-case circuit breakers.

Front Cover Screws

Westinghouse molded-case circuit breakers manufactured by Eaton are packed individually and shipped in Eaton labeled cartons. Anything other than this is not to be considered new and should be suspect.

Eaton Labeled Cartons

Replacement Capabilities Series C and Series G Molded-Case Circuit Breakers

When and Where to Use

- Generally a first choice wherever physically and electrically practical
- Where communications, arc flash protection, energy and power quality monitoring are desired
- As a direct replacement or add-on to already installed Series C or Series G product, including Westinghouse breakers (see **Page V12-T3-114**)
- For special applications such as DC engine generator

Advantages

- The most current molded-case circuit breaker technology
- Higher interrupting capacities in each frame size
- Smaller and lighter for a given frame size than other options
- Generally less expensive than other replacement breaker options
- Readily available throughout range, high levels of stock
- Available from stock
- One-year warranty

Current Production Replacement Circuit Breakers

When and Where to Use

- As a direct, one-for-one replacement of current production pre-Series C product
- Where you know the catalog/style number but not the physical or electrical specifics about the application

Advantages

- Ease of selection and certainty of replacement
- Guaranteed to be both a physical and electrical duplicate of original
- Still in production
- Newly manufactured
- UL listed
- Available from stock
- One-year warranty

Replacement of Current Panelboard Molded-Case Circuit Breakers

When and Where to Use

- When replacing Series C circuit breakers in a current design panelboard

Advantages

- Newly manufactured and tested to the latest technology
- UL Listed
- Available from stock in most frame sizes
- One-year warranty. Refer to **Page V12-T3-91** for Series C connector kits

Replacement of Out-of-Production Panelboard Molded-Case Circuit Breakers (Including Westinghouse)

When and Where to Use

- When replacing out-of-production circuit breakers in an existing panelboard
- When replacing Westinghouse breakers. Refer to **Pages V12-T3-81–V12-T3-90** and **Page V12-T3-114**

Advantages

- Newly manufactured and tested to the latest applicable standards
- Both physically and electrically interchangeable with the circuit breakers that they are designed to replace
- UL Listed
- Available from stock in most frame sizes
- One-year warranty

Replacement of Out-of-Production Motor Control Center Molded-Case Circuit Breakers and Upgrades

When and Where to Use

- When replacing out-of-production circuit breakers in an existing motor control center: 5 Star, Type W and F10 designs
- When upgrading Westinghouse breakers with a Series C technology upgrade breaker

Advantages

- Newly manufactured and tested to the latest technology
- Series C retrofit kits are physically and electrically interchangeable with the circuit breakers that they are designed to replace
- UL Listed
- Available from stock in most frame sizes
- One-year warranty. Refer to **Page V12-T3-91**

Contact: 1-800-OLD-UNIT.

Service for Molded-Case Circuit Breakers

When and Where to Use

- Where circuit breaker has sustained minor physical damage to a handle, lug, etc., that otherwise would be fully functional
- Large frame circuit breaker (600A and above) that has experienced some normal wear, but is in generally good condition, as an economically driven alternative to new
- When replacing Westinghouse breakers. Refer to **Page V12-T3-114**

Advantages

- Prevents loss of circuit breakers due to minor damage
- Reduces overall breaker costs
- Prevents use of potentially unreliable third-party refurbishers
- Includes full one-year Eaton Electrical Inc. warranty
- Ensures reliability through dealing with the original manufacturer with a long and well-recognized tradition of product safety, integrity and quality
- Provides a simple and convenient solution

Current Design							
These circuit breakers replace the out-of-production circuit breakers listed below.	QCR 	QCF 	QC 	QCHW 	QHCX 	QHCW 	WMZ/FAZ 
	Width: 0.50 Height: 3.94 Depth: 2.44	Width: 1.00 Height: 3.75 Depth: 2.44	Width: 1.00 Height: 3.75 Depth: 2.44	Width: 1.00 Height: 3.75 Depth: 2.44	Width: 1.00 Height: 3.75 Depth: 2.44	Width: 1.00 Height: 3.75 Depth: 2.44	Width: 0.70 Height: 4.10 Depth: 2.60
Out-of-Production Westinghouse Circuit Breakers							
These circuit breakers are no longer manufactured. Recommended QUICKLAG circuit breakers listed above.	No previous circuit breaker existed	HQCL, HQCAL, HQC, HQCA, QCA	QCH	No previous circuit breaker existed	QHCL, QHC	WMT	

Note: For supplementary protectors, the Eaton WMZS and FAZ Series replace the WMS supplementary protectors that are no longer manufactured.

QUICKLAG Miniature Circuit Breakers

QUICKLAG is the largest and most complete family of industrial thermal-magnetic miniature circuit breakers. They provide the exclusive features of steel frame calibration and arc chutes in every pole.

QUICKLAG circuit breakers are provided in ranges from 5 to 125A continuous in single-, two- and three-pole configurations with interrupting capacities from 10,000 AIC to 65,000 AIC. QUICKLAG circuit breakers have been series rated up to 200,000 AIC in conjunction

with larger Westinghouse/Cutler-Hammer current limiting circuit breakers.

Each QUICKLAG rating is available for plug-in (Type P), bolt-on (Type B) and cable-to-cable connections (Type C) for line/load feed applications. They are also available with one of the industry's widest

selection of accessories, including shunt trip, and can be custom modified to meet special application requirements.

CHB Circuit Breaker

Originally a Cutler-Hammer Product

The CHB breaker continues to be available as a replacement breaker for use in Cutler-Hammer Type PB panelboards.

When combined with the mounting base, CHB breakers were also used for surface and DIN rail mount cable-in/cable-out applications. (See photo below.)

For “new” cable-in/cable-out applications, Eaton recommends the use of our most current product offering:

- QUICKLAG Type QC breakers (1.00-inch per pole)
- QCR breakers—rear mount (0.50-inch per pole)
- QCF breakers—front mount (0.50-inch per pole)

QCR and QCF breakers provide a 50% space savings over 1.00-inch per pole designs of the same rating.

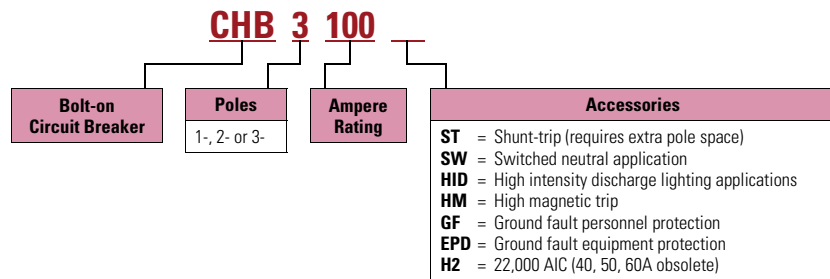

CHB Breaker Mounting Base

Notes

① When upgrading a HLB, LBB to a Series C K-Frame in a panelboard application, also order TAD3 spacer kit.

② These frames are obsolete. For replacement solutions see the cross-reference on Pages V12-T3-114–V12-T3-167.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
- ② DC ratings apply to substantially non-inductive circuits.
- ③ Not UL Listed.
- ④ All four poles have thermal-magnetic trip elements. Can be supplied with three protected poles and one unprotected, non-automatic pole if required. Order by description with no price or dimensional differences.
- ⑤ 15–30A rated 75,000 AIC. 40–100A rated 30,000A asymmetrical, 25,000A symmetrical.
- ⑥ Two-pole breakers are supplied in three-pole frames with current carrying parts omitted from center pole.
- ⑦ Includes line and load terminals. MARK 75 frame color changed from gray to black in mid-2002.
- ⑧ Switching duty rated for 277 Vac fluorescent light applications only.
- ⑨ Interrupting capacities shown do not apply to molded-case switches.
- ⑩ Ratings above 10,000A not UL Listed.

Accessories and Modifications

Terminals

Breakers include load terminals only. Terminals are UL Listed as suitable for wire type and size. When used with aluminum conductors, use joint compound. When line terminals are required, order by style number from the table at no charge with the breaker.

Note: Magnetic only breakers include both line and load terminals.

Note: Suffix "L" on catalog number indicates line and load terminals included. If factory installation is required, specify on order.

Terminals

Maximum Amperes	Wire Type	Wire Range	Package of Three Line Terminals ^① Style Number
Standard Pressure Type Terminals			
20 (EB, EHB)	Al/Cu	#14-#10	624B100G14
100	Al/Cu	#14-1/0	624B100G02
150	Al/Cu	#4-4/0	624B100G17
Optional Al/Cu Pressure Terminals			
50	Al/Cu	#14-#4	624B100G10
100	Al/Cu	#4-4/0	624B100G17

Terminal Style 624B100G02

Insert collar enclosing conductor as shown. Locate nut on top of conductor and tighten securely with screw and washer. **Caution:** Collar must surround conductor.

Terminal Style 624B100G10

Assemble collar on top of conductor as shown. Tighten securely with screw and washer.

Terminal Style 624B100G17

Insert collar enclosing conductor and center on extrusion on collar. Install clip with legs on top of conductor and snap end around bottom of collar.

Terminal Style 624B100G14

Assemble wire clamp to bottom of conductor as shown.

Shaded area denotes obsolete or discontinued products and services.

LFB Current Limiter Attachment

The LFB current limiter is an attachment that bolts to the load end of a standard FB thermal-magnetic or magnetic only breaker, providing 200,000A interrupting capacity (AIC) at up to 600 Vac. Limiters for thermal-magnetic breakers are UL Listed. Current limiters must be applied as indicated in the table on **Page V12-T3-16**.

Standard LFB terminals are suitable for Cu/Al cable. Ratings through 70A accept (1) #14-#2, and 100 and 150A accept (1) #1-4/0.

Note: Cannot be used with plug-in adapters. Ratings through 70A can be supplied with terminals for Cu cable only (#14-#2). Order by description.

LFB Current Limiter Attachment ^②

Breaker Rating, Amperes	Limiter Catalog Number

Notes

- ① Style listed is for package of three terminals.
- ② These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114-V12-T3-167**.
- ③ Ratings through 70A can be supplied with terminals for Cu cable only (#14-#2). Order by description.
- ④ Superseded by LFD3070R.
- ⑤ Superseded by LFD3150R.
- ⑥ Replace with Series C HMCP and ELC current limiters or replace with MCP and EL current limiters

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0-60 Hz AC, refer to Eaton. See Application Data 29-160 for information regarding special conditions. Maximum calibration for 400 Hz is 135A.

Note: Not UL Listed.

50°C Calibration

Add suffix "V" to catalog number for complete breaker, listed above, when ordering breakers to be used in 50°C ambients.

Note: Not UL Listed.

Ambient Compensating Breakers

To order, add suffix letter "A" to standard thermal-magnetic breaker catalog number.

Available in all standard ratings of EB, EHB, FB and HFB breakers up to ratings of 100A. Factory adder 20%.

Note: Not UL Listed.

Federal Specification Classifications

EB, EHB, FB and HFB breakers meet requirements of Federal Specification W-C-375b as follows:

- EB: single-pole, Class 11a; two-, three-pole, Classes 10b, 11b, 12b
- EHB: single-pole, Class 13a; two-, three-pole, Class 13b
- FB: two-, three-pole, Class 18a
- HFB: single-pole, Class 13a; two-, three-pole, Class 22a

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

175	#2/0–300 kcmil		CCV2175	CCVH2175
200	#2/0–300 kcmil		CCV2200	CCVH2200
225	#2/0–300 kcmil		CCV2225	CCVH2225

Interrupting Capacity at 120/240 Vac

- Type CCV—10,000A rms symmetrical
- Type CCVH—25,000A rms symmetrical

Handles

- Trip-free with “ON-TRIPPED-OFF” positions. Reset past “OFF” is required to latch breaker contacts after tripping

Terminals

- Standard lugs (wire connectors) suitable for either CU or AL wire

Standards

- Complies with UL Standard 489, breakers are listed under UL File #E781

Backward Compatibility

- CCV and CCVH retains same profile and footprint of the CC and CCH breaker allowing use in the same applications

Terminal Options

Terminal configurations available by adding the following designator on the suffix:

W = No terminals

X = Load side terminals only

Y = Line side terminals only

CCV as tenant main breaker with CC as aftermarket option.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
- ② Terminals are shipped separately from breaker frame.
- ③ Not UL Listed.
- ④ Two-pole breakers are supplied in three-pole frames with current carrying parts omitted from center pole.
- ⑤ Select desired terminal from table and order as separate item.

UL Listed Interrupting Ratings ①

Maximum Volts	Amperes
240 AC	30,000 asymmetrical, 25,000 symmetrical
480 AC	25,000 asymmetrical, 22,000 symmetrical
600 AC	15,000 asymmetrical, 14,000 symmetrical
250 DC	10,000

Terminals

Maximum Amperes	Number of Cables, Wire Range, Type	Catalog Number
Standard Al/Cu Pressure Terminals		
250	(1) #4–350 kcmil Al/Cu	TA250KB
Optional Pressure Terminals		
250	(1) #4–350 kcmil Cu	T250KB

Note

① Ratings above 10,000A not UL Listed.

Accessories and Modifications

■ Shaded area denotes obsolete or discontinued products and services.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker when ordering breakers to be used in 50°C ambients. Same price as standard 40°C breakers.

For CSA®, see Page V12-T3-48.

Type JB breakers meet requirements of Class 19a circuit breakers as defined by Federal Specification W-C-375b.

Note: Not UL Listed.

UL Listed Interrupting Rating (see table)

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals (see table)

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed left. When used with aluminum conductors, use joint compound. To order optional copper only terminals, add suffix “C” to complete breaker catalog number.

Note: Terminals are shipped separately from breaker frame.

Magnetic Only Breakers

For description, refer to Application Data 29-160.

Additional Accessories and Modifications

Refer to **Pages V12-T3-65–V12-T3-79**.

Accessories and Modifications

Shaded area denotes obsolete or discontinued products and services.

Magnetic Only, Front Adjustable Breakers (see table on Page V12-T3-21)

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton.

Note: Two-pole breakers are supplied in three-pole frames with current carrying parts omitted from center pole.

50°C Calibration

Add suffix “V” to catalog number for complete breaker, listed on Page V12-T3-21, when ordering breakers to be used in 50°C ambients.

For CSA, see Page V12-T3-48.

Note: Two-pole breakers are supplied in three-pole frames with current carrying parts omitted from center pole.

Type KB breakers meet requirements for Class 19a, as defined by Federal Specification W-C-375b. Type HKB breakers not defined in W-C-375b.

UL Listed Interrupting Ratings (see table)

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals (see table)

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed below. When used with aluminum conductors, use joint compound. To order optional copper only terminals, add suffix “C” to complete breaker catalog number.

Magnetic Only Breakers

For description, refer to Application Data 29-160. To order these breakers, select frame, trip unit and terminals.

Additional Accessories and Modifications

Refer to Pages V12-T3-65–V12-T3-79.

70–225	(1) #6–350 kcmil Cu	T225LA
70–225 ①	(1) #6–250 kcmil Cu	T225LBF

Note

① Optional terminal.

Accessories and Modifications

■ Shaded area denotes obsolete or discontinued products and services.

Special Calibrations (see table on Page V12-T3-23)

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton.

See Application Data 29-160 for information regarding special conditions.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker when ordering breakers to be used in 50°C ambients.

For CSA, see Page V12-T3-48.

Type JA breakers meet requirements of Class 19a and 20a circuit breakers as defined by Federal Specification W-C-375b.

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals (see table)

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed left. When used with aluminum conductors, use joint compound. To order optional copper only terminals, add suffix “C” to complete breaker catalog number.

Note: Terminals are shipped separately from breaker frame.

Note: If upgrading a JA breaker to a Series C K-Frame in a panelboard application, order TAD3 spacer kit.

UL Listed Interrupting Ratings (see table)**Magnetic Only and Ambient Compensating Breakers**

For description, refer to Application Data 29-160. To order, select catalog number from table on **Page V12-T3-23**.

225 ^②	(1) #6–250 kcmil Cu	T225LBF

Notes

- ^① Ratings above 10,000A not UL Listed.
^② Optional terminal.

Accessories and Modifications

■ Shaded area denotes obsolete or discontinued products and services.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton. See Application Data 29-160 for information regarding special conditions.

Note: Not UL Listed.

50°C Calibration

Add suffix "V" to catalog number for complete breaker when ordering breakers to be used in 50°C ambients.

Note: Not UL Listed.

Terminals (see table)

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed below. When used with aluminum conductors, use joint compound. To order optional copper only terminals, add suffix "C" to complete breaker catalog number.

Type KA breakers meet requirements for Class 19a and 20a circuit breakers, and Type HKA meet requirements for Class 23a as defined by Federal Specification W-C-375b.

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Note: Terminals are shipped separately from breaker frame.

Note: If upgrading a KA, HKA breaker to a Series C K-Frame in a panelboard application, also order TAD3 spacer kit.

UL Listed Interrupting Ratings (see table)**Magnetic Only Breakers**

For description, refer to Application Data 29-160. To order these breakers, select frame, trip unit and terminals.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC circuits, refer to Eaton. See Application Data 29-160 for information regarding special conditions. Maximum calibration for 400 Hz is 300A.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker or trip unit only, when ordering breakers to be used in 50°C ambients.

Note: Not UL Listed.

Magnetic Only Breakers

For description, refer to Application Data 29-160. To order, select trip unit from table above, frame and terminals.

Note: Not UL Listed.

For CSA, see Page V12-T3-48.

Type LB breakers meet requirements for Class 21a circuit breakers, and Type HLB meet requirements for Class 23a, as defined by Federal Specification W-C-375b.

UL Listed Interrupting Ratings

Maximum Volts	Amperes
Standard Breakers	
240 AC	50,000 asymmetrical, 42,000 symmetrical

600 AC	25,000 asymmetrical, 22,000 symmetrical
250 DC	20,000 ⑤
MARK 75 Breakers	
240 AC	75,000 asymmetrical, 65,000 symmetrical
480 AC	40,000 asymmetrical, 35,000 symmetrical
600 AC	30,000 asymmetrical, 25,000 symmetrical
250 DC	20,000 ⑤

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed below. When used with aluminum cable, use joint compound. To order optional copper only terminals, add suffix “C” to complete breaker catalog number.

Note: Terminals are shipped separately from breaker. If upgrading an LB, HLB breaker to a Series C K-Frame in a panelboard application, also order TAD3 spacer kit.

Terminals

Maximum Amperes	Number of Cables, Wire Range, Type	Catalog Number
Standard Pressure Terminals		
225	(1) #6–350 kcmil Cu, or (1) #4–350 kcmil Al	TA225LA1
350	(1) 250–500 kcmil Al/Cu	TA350DA
400	(2) 3/0–250 kcmil Cu only	T400DA2
Optional Copper Pressure Terminals		
225	(1) #6–350 kcmil Cu	T225LA
225 ⑥	(1) #6–250 kcmil Cu	T225LBF
350	(1) 250–500 kcmil Cu	T350DA

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-126–V12-T3-167**.
- ② Not UL Listed.
- ③ Set on high side, adjustable to lower limits.
- ④ Two-pole breakers or trips are supplied in three-pole frames with current carrying parts omitted from center pole.
- ⑤ Ratings above 10,000A not UL Listed.
- ⑥ Optional terminal.

Type DA

■ Shaded area denotes obsolete or discontinued products and services. ①

DA: 240 Vac; 250 Vdc

Accessories and Modifications

■ Shaded area denotes obsolete or discontinued products and services

Type DA breakers meet requirements of Federal Specification W-C-375b., Class 14b.

UL Listed Interrupting Ratings

Maximum Volts	Amperes
240 AC	25,000 asymmetrical, 22,000 symmetrical
250 DC	10,000

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals

Terminals are UL Listed for the wire type and size listed below. When used with aluminum conductors, use joint compound.

Terminals

Maximum Amperes	Number of Cables, Wire Range, Type	Catalog Number
Standard Pressure Terminals		
350	(1) 250–500 kcmil Al/Cu	TA350DA
400	(2) 3/0–250 kcmil Cu only	T400DA2
Optional Terminals (for Copper Cable)		
350	(1) 250–500 kcmil Cu	T350DA

Note: If upgrading a DA breaker to a Series C K-Frame in a panelboard application, also order TAD3 spacer kit.

For CSA, see Page V12-T3-48.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC circuits, refer to Eaton. See Application Data 29-160 for information regarding special conditions. Maximum 400 Hz calibrations: Type DA, 300A.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker when ordering breakers to be used in 50°C ambients. Same price as standard 40°C breakers.

Note: Not UL Listed.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on Pages V12-T3-114–V12-T3-167.
- ② Two-pole breakers are supplied in three-pole frames.

Accessories and Modifications

Shaded area denotes obsolete or discontinued products and services.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC circuits, refer to Eaton. See Application Data 29-160 for information regarding special conditions. Maximum calibration for 400 Hz is 300A.

Note: Not UL Listed.

50°C Calibration

Add suffix "V" to catalog number for complete breaker when ordering breakers to be used in 50°C ambients. **For CSA, see Page V12-T3-48.**

Note: Not UL Listed.

Type LAB breakers meet requirements for Class 21a circuit breakers, as defined by Federal Specification W-C-375b.

UL Listed Interrupting Ratings ⑥

Maximum Volts	Amperes
240 AC	50,000 asymmetrical, 42,000 symmetrical
480 AC	35,000 asymmetrical, 30,000 symmetrical
600 AC	25,000 asymmetrical, 22,000 symmetrical
250 DC	20,000 ⑦

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals

Two terminals required per pole.

Select from the table on **Page V12-T3-36**.

Note: Terminals shipped separately from breaker.

Magnetic Only and Ambient Compensating Breakers

To order, select catalog number from "Special Breakers" table above.

Additional Accessories and Modifications

Refer to **Pages V12-T3-65–V12-T3-79**.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
- ② Not UL Listed.
- ③ Set on high side, adjustable to lower limits.
- ④ Two-pole breakers or trips are supplied in three-pole frames with current carrying parts omitted from center pole.
- ⑤ Select desired terminals from **Page V12-T3-39** and order as separate item.
- ⑥ Interrupting capacities shown do not apply to molded-case switches.
- ⑦ Ratings above 10,000A not UL Listed.

Accessories and Modifications

■ Shaded area denotes obsolete or discontinued products and services.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton. See Application Data 29-160 for information regarding special conditions. Maximum 400 Hz calibration: 400A frame, 300A.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker or trip unit only, when ordering breakers to be used in 50°C ambients.

Note: Not UL Listed.

Terminals

Two terminals required per pole.

Select from table at right.

Note: Terminals shipped separately from breaker.

Magnetic Only Breakers

To order, select trip unit from the table on **Page V12-T3-35**, frame and terminals from table at right.

Note: Not UL Listed. MARK 75 frame color changed from gray to black in mid-2002.

UL Listed Except as Noted

Type LA breakers meet requirements for Class 21a circuit breakers, and Type HLA meet requirements for Class 23a as defined by Federal Specification W-C-375b.

UL Listed Interrupting Ratings ^①

Maximum Volts	Amperes
Standard Breakers	
240 AC	50,000 asymmetrical, 42,000 symmetrical

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on Pages V12-T3-114–V12-T3-167.
- ② Set on high side, adjustable to lower limits.
- ③ Terminals shipped separately from breakers.
- ④ Terminals, trip units and accessories are not interchangeable between 400 and 600A frames.
- ⑤ Two-pole breakers or trips are supplied in three-pole frames with current carrying parts omitted from center pole.
- ⑥ Not UL Listed.

Accessories and Modifications

Shaded area denotes obsolete or discontinued products and services.

3

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton. See Application Data 29-160 for information regarding special conditions. Maximum 400 Hz calibration: 600A frame, 450A.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker or trip unit only, when ordering breakers to be used in 50°C ambients. Same price as standard 40°C breakers.

For CSA, see Page V12-T3-48.

Type LA breakers meet requirements for Class 21a circuit breakers, and type HLA meet requirements for Class 23a as defined by Federal Specification W-C-375b.

Note: Not UL Listed. MARK 75 frame color changed from gray to black in mid-2002.

UL Listed Interrupting Ratings ^①

Maximum Volts	Amperes
Standard Breakers	
240 AC	50,000 asymmetrical, 42,000 symmetrical
480 AC	35,000 asymmetrical, 30,000 symmetrical
600 AC	25,000 asymmetrical, 22,000 symmetrical
250 DC	20,000 ^②
MARK 75 Breakers	
240 AC	75,000 asymmetrical, 65,000 symmetrical
480 AC	40,000 asymmetrical, 35,000 symmetrical
600 AC	30,000 asymmetrical, 25,000 symmetrical
250 DC	20,000 ^②

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals

Two terminals are required per pole. Terminals are UL Listed for wire type and range listed below. When used with aluminum cable, use joint compound. To order optional copper only terminals, add suffix “C” to complete breaker catalog number.

Note: Terminals shipped separately from breakers. Terminals, trip units and accessories are not interchangeable between 400 and 600A frames.

Terminals

Maximum Amperes	Number of Cables, Wire Range, Type	Catalog Number
Standard Al/Cu Pressure Terminals		
600 ^③	(2) 250–500 kcmil Al/Cu	TA600LA
Optional Copper Pressure Terminals		
600 ^③	(2) 250–500 kcmil Cu	T600LA

Notes

- ^① Interrupting capacities shown do not apply to molded case switches.
- ^② Ratings above 10,000A not UL Listed.
- ^③ For 600A frame breakers only.

Magnetic Only Breakers

To order, select frame, trip unit and terminals from tables on this page.

Accessories and Modifications

1000	(3) 3/0–500 kcmil Cu	T1000NB1
1200	(4) 3/0–400 kcmil Cu	T1200NB1
1200	(3) 500–750 kcmil Al/Cu	TA1201NB1

Accessories and Modifications

■ Shaded area denotes obsolete or discontinued products and services.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC (50 Hz AC minimum, 60 Hz AC maximum for ratings of 700A and above), refer to Eaton. See Application Data 29-160 for additional information regarding special conditions. Maximum 400 Hz calibration for type MA is 475A.

Note: Not UL Listed.

50°C Calibration

Add suffix "V" to catalog number for complete breaker or trip unit only, when ordering breakers to be used in 50°C ambients. **For CSA, see Page V12-T3-48.**

Note: Not UL Listed.

Type NB breakers meet requirements for Class 21a circuit breakers, and Type HNB meet requirements for Class 23a, as defined by Federal Specification W-C-375b.

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Terminals

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed below. When used with aluminum conductors, use joint compound. To order optional copper terminals, add suffix "C" to complete breaker catalog number.

Note: Frames, terminals, studs, mounting hardware, dimensions and shipping weights are same as standard thermal magnetic breakers.

Magnetic Only Breakers

To order a complete breaker, select trip unit, plus frame and terminals.

Note: Not UL Listed.

Additional Accessories and Modifications

Refer to **Pages V12-T3-65–V12-T3-79**.

Notes

- ① 250 Vdc rating applied only to magnetic only type breakers.
- ② Terminals shipped separately from breaker.
- ③ Ratings above 10,000A not UL Listed.
- ④ MARK 75 frame color changed from gray to black in mid-2002.

Type NBY

Accessories and Modifications

Shaded area denotes obsolete or discontinued products and services.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC (50 Hz AC minimum, 60 Hz AC maximum), refer to Eaton. See Application Data 29-160 for additional information regarding special conditions.

Note: Not UL Listed.

50°C Calibration

Add suffix “V” to catalog number for complete breaker or trip unit only, when ordering for breakers to be used in 50°C ambients.

Note: Not UL Listed.

For CSA, see Page V12-T3-48.

Type NBY breakers are not defined by Federal Specification W-C-375b.

Additional Accessories and Modifications

Refer to **Pages V12-T3-65–V12-T3-79**.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
- ② Higher frequency calibration not available. Minimum of 50 Hz calibration available on special order.
- ③ Set on high side, adjustable to lower limits.
- ④ Terminals shipped separately from breaker.

Special Calibrations

Special calibration price additions apply to ampere ratings not listed as standard, or for ambients other than 40°C or 50°C. For frequencies other than 0–60 Hz AC, refer to Eaton. See Application Data 29-160 for information regarding special conditions.

Note: Not UL Listed.

50°C Calibration

Add suffix "V" to catalog number for complete breaker or trip unit only, when ordering breakers to be used in 50°C ambients.

Type PB breakers meet the requirements for Class 25a circuit breakers as defined by Federal Specification W-C-375b.

Interrupting Ratings

Maximum Volts	Amperes
240 AC ②	150,000 asymmetrical, 125,000 symmetrical
480 AC ②	115,000 asymmetrical, 100,000 symmetrical
600 AC ②	115,000 asymmetrical, 100,000 symmetrical
250 DC ②	75,000A ⑥

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Magnetic Only Breakers

To order a complete breaker, select trip unit, plus frame and connectors.

Note: Not UL Listed.

Busbar Connections

"T" Connector

Busbar Connections— "T" Connector (For Cu/Al Bus)

Catalog Number

BA2000PB

Two required per pole. For rear bus connection of breakers through 2000A. Accepts up to four bus bolts. May be rotated 90°.

Note: Shipped separately from breaker.

"C" Connector

"C" Connector (For Cu/Al Bus)

Breaker Amperes

2500

Catalog Number

BA2500PB

Two required per pole. For rear bus connection of 2500A breakers.

Cable Connector

Cable Connector

Catalog Number

505C706G04

Fits "T" Connector and 2000A front-connected breakers. Accepts four 400–600 kcmil copper cables.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
- ② Not UL Listed.
- ③ Frames, connectors, dimensions and shipping weights are same as thermal-magnetic breakers.
- ④ Set on high side, adjustable to lower limits.
- ⑤ Two-pole breakers are supplied in three-pole frames with current carrying parts omitted from center pole.
- ⑥ Based on NEMA test procedure.

Types LC, LCC, LCA, LCCA, MARK 75 Types HLC, HLCC, HLCA, HLCCA SELTRONIC with Solid-State Trip Units 600 Vac, 50/60 Hz

Complete breaker requires frame and rating plug. See the table and terminals on **Page V12-T3-60**. Extra current transformer included for neutral. See accessories on **Page V12-T3-65** for remote ground fault trip indicator.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
 ② Two-pole breakers supplied in three-pole frames with current carrying parts omitted from center pole.
 ③ For applications other than standard residual scheme, see Application Data 29-160.
 MARK 75 frame color changed from gray to black in mid-2002.

Types LCG, LCCG, LCGA, LCCGA, MARK 75 HLCG, HLCCG, HLCGA, HLCCGA SELTRONIC with Built-In Ground Fault Protection Accessories and Modifications

Field-Mountable Attachments ①②③④⑤

Description	Style Number
Provision to trip flux transfer shunt trip from external source 32 to 120 Vdc to 60 Hz ⑥	1371D11G22
240 to 600 Vac, 50/60 Hz ⑦	1371D11G32
Provision to trip flux transfer shunt trip from external source, plus a 1A-1B auxiliary switch 32 to 120 Vdc to 60 Hz ⑥	1371D11G15
240 to 600 Vac, 50/60 Hz ⑦	1371D11G25
Provision to trip flux transfer shunt trip from 24 Vdc source	1371D93G01
1A-1B auxiliary switch	1371D11G03
24 Vdc shunt trip and 1A-1B auxiliary switch	1371D94G08

For CSA, see Page V12-T3-48.

Type LC breakers meet requirements for Class 21a circuit breakers, and Type HLC meet requirements for Class 23a as defined by Federal Specification W-C-375b.

UL Listed Interrupting Ratings ⑧

Maximum Volts	Amperes
Standard Breakers	
240 AC	50,000 Asymmetrical, 42,000 Symmetrical
480 AC	35,000 Asymmetrical, 30,000 Symmetrical
600 AC	25,000 Asymmetrical, 22,000 Symmetrical
MARK 75 Breakers	
240 AC	75,000 Asymmetrical, 65,000 Symmetrical
480 AC	40,000 Asymmetrical, 35,000 Symmetrical
600 AC	30,000 Asymmetrical, 25,000 Symmetrical

For all three-phase delta, grounded B phase applications, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Additional Accessories and Modifications

Refer to Pages V12-T3-65–V12-T3-79.

Terminals

Note: Order separately.

Two terminals are required per pole.

Terminals are UL Listed for wire type and range listed below. When used with aluminum cable, use joint compound.

150, 300 and 400A Frames Only

Maximum Amperes	Number of Cables, Wire Range, Type	Catalog Number
Al/Cu Pressure Terminals		
225	(1) #6–350 kcmil Cu, or (1) #4–350 kcmil Al	TA225LA1
400	(1) #4–250 kcmil Al/Cu, plus (1) 3/0–600 kcmil Al/Cu	TA400LA1
Optional Copper Pressure Terminals		
225	(1) #6–350 kcmil Cu	T225LA
225	(1) #6–250 kcmil Cu	T225LBF
400	(1) #4–250 kcmil Cu, plus (1) 3/0–600 kcmil Cu	T401LA

600A Frame Only

Maximum Amperes	Number of Cables, Wire Range, Type	Catalog Number
Al/Cu Pressure Terminals		
500	(2) 250–350 kcmil Al/Cu	TA602LD
600	(2) 400–500 kcmil Al/Cu	TA603LA
600 (std.)	(2) 250–500 kcmil Al/Cu	TA600LA
Optional Copper Pressure Terminals		
600	(2) 250–500 kcmil Cu	T600LA

Notes

- ① Only one attachment may be mounted per breaker.
 - ② Contact Avery Creek, NC, Technical Resource Center for other combinations.
 - ③ Molded-case switches do not use standard SELTRONIC attachments, and should be ordered by description for factory mounting.
 - ④ Does not void listing of UL Listed breakers.
 - ⑤ Left pole mounting.
 - ⑥ Rated 48 volts minimum for ground fault applications requiring tripping at 55% of voltage.
 - ⑦ Not for use on ground fault applications.
 - ⑧ Interrupting capacities shown do not apply to molded-case switches.
- MARK 75 frame color changed from gray to black in mid-2002.

- ③ UL Recognized component.
- ④ UL Listed for standard applications.
- ⑤ These breakers are UL Listed for application at 100% of rating per NEC exceptions when used in a properly ventilated and listed enclosure.

Accessories and Modifications

Drawout Mounting Breakers, Three-Pole Only

Breaker frame and complete drawout frame with safety tripping interlock.

Order by description. Secondary contacts supplied as required at no extra charge. Order required rating plug separately. Refer to **Page V12-T3-79**.

Note: Includes breakers without adjustable short delay time.

Rating Plugs

Select from the table on **Page V12-T3-60**.

Stationary portion of drawout frame only for future breaker installations, three-pole only. Refer to **Page V12-T3-79**.

Special Type PCC Breakers for SCR Power Supplies

These drawout mounting breakers are designed with a 2 to 4 times magnetic trip adjustment and special time delay trip characteristics to provide maximum protection and coordination with SCR power supplies on offshore drilling rigs. Suitable for application at 100% of rating.

Order by description. Secondary contacts supplied as required. Order standard rating plugs separately.

Availability: PCC2000, PCC2500 drawout-mounting breakers.

Type PC and PCC meet requirements of Class 25a as defined in Federal Spec. W-C-375b.

For CSA, see Page V12-T3-48.

UL Listed Interrupting Capacity rms Symmetrical Amperes (Standard and Ground Fault Breakers) ^①

Breaker	AC Volts		
	240	480	600
PC, PCC	125,000	100,000	100,000

Note

^① Interrupting capacities shown do not apply to molded-case switches.

Additional Accessories and Modifications

Refer to **Pages V12-T3-65–V12-T3-79**.

Types PCG, PCGA, PCCG, PCCGA SELTRONIC with Built-In Ground Fault Protection Includes Extra Current Transformer for Neutral (Optional Remote Ground Fault Trip Indicator Kit, Page V12-T3-65)

Complete breaker requires frame and rating plug. See the table on **Page V12-T3-60** and rear connectors (except front-connected frames and 3000A frames include connectors).

Shaded area denotes obsolete or discontinued products and services.

Note: Available without extra CT for neutral. Order by description as similar to above except without neutral CT or external CT terminal connections at same price. Older catalog numbers: PCFGX—"X" means without fourth CT.

Note: The standard ground fault unit listed can also be used without the neutral CT.

Notes

- ① UL Listed for standard applications.
- ② For application other than standard residual schemes, refer to Application Data 29-160.
- ③ These breakers are UL Listed for application at 100% of rating per NEC exceptions when used in a properly ventilated and listed enclosure.

Types PCG, PCGA, PCCG, PCCGA SELTRONIC with Built-In Ground Fault Protection Accessories and Modifications

PC breakers are not UL Listed.

Field-Mountable Attachments ^{①②③}

Description	Style Number
Provision to trip flux transfer shunt trip from external source 32 to 120 Vdc to 60 Hz ^④	1372D35G22
240 to 600 Vac, 50/60 Hz ^⑤	1372D35G32
Provision to trip flux transfer shunt trip from external source plus 1A-1B auxiliary switch 32 to 120 Vdc to 60 Hz ^④	1372D35G15
240 to 600 Vac, 50/60 Hz ^⑤	1372D35G25
2A-2B auxiliary switch	1372D35G18
Provision to trip flux transfer shunt trip from external 24 Vdc source	1371D95G01
1A-1B auxiliary switch	1372D35G03
1A-1B auxiliary switch and 24 Vdc shunt trip	1371D95G04
2A-2B auxiliary switch and 24 Vdc shunt trip	1371D95G07
3A-3B auxiliary switch and 24 Vdc shunt trip	1371D95G10

Rear Bus Connectors

Two required per pole. Fixed mounting breakers.

Rear Bus Connectors

Breaker Frame ^⑥	Connector Style/Catalog Number
PC2000 ^⑦ , PCC2000 ^⑦	BA2000PB
PC2500 ^⑦ , PCC2500 ^⑦	BA2500PB

Racking Crank for Drawout Frames

To engage or withdraw the moving portion of the drawout. A standard 0.50-inch hex socket with extension can be used for this purpose.

Racking Crank

Style Number

765A767G01

Cell Switches Mounted on Drawout Frames, All Ratings

A maximum of four switches can be provided. Order by description. Each switch provides a NO and NC contact that transfers before reaching the test position when being withdrawn, and after the test position when being racked in.

Approximate Shipping Weights, PC and PCC Breakers (Three-Pole)

Rating	Breaker			
	PC, PCC	PCF, PCCF	PCG, PCCG	PCFG, PCCFG
2000	136 lbs	163 lbs	160 lbs	185 lbs
2500	145 lbs	175 lbs	170 lbs	200 lbs
3000	220 lbs	—	245 lbs	—

Busbar Connections

"T" Connector

Busbar Connections— "T" Connector (For Cu/Al Bus)

Catalog Number

BA2000PB

Two required per pole. For rear bus connection of breakers through 2000A. Accepts up to four bus bolts. May be rotated 90°.

Note: Shipped separately from breaker.

"C" Connector

"C" Connector (For Cu/Al Bus)

Breaker Amperes

2500

Catalog Number

BA2500PB

Two required per pole. For rear bus connection of 2500A breakers.

Cable Connector

Cable Connector

Catalog Number

505C706G04

Fits "T" Connector and 2000A front-connected breakers. Accepts four 400–600 kcmil copper cables.

Notes

- ① For other possible combinations, contact your local Eaton Field Sales office.
- ② Only one of these attachments may be mounted per breaker.
- ③ Left pole mounting.
- ④ Rated 48V minimum for ground fault applications.
- ⑤ Not for ground fault applications.
- ⑥ Also apply to equivalent ratings of PCG and PCCG ground fault breakers.
- ⑦ Not required for front-connected frames.

SELTRONIC Rating Plug Selection Data

Rating plugs listed below are for both standard breakers and breakers with built-in ground fault protection.

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on Pages V12-T3-114–V12-T3-167.
- ② Catalog number suffix identification:
K = Molded-case switch with high magnetic trip (fixed trip setting)
S = Saf-T-Vue cover
W = No terminals
- ③ Molded-case switch dimensions are the same as the equivalent thermal-magnetic breaker. Refer to Dimension Sheet 29-171.
- ④ For molded-case switch types LC, LCC—use LA attachments;
MC and MCC—use MA attachments; NC—use NB attachments.
- ⑤ For molded-case switch types PC, PCC and PCF, rating plug is included and use SELTRONIC PC attachments.

Type MCP Motor Circuit Protector

The motor circuit protector (MCP) is designed specifically for the protection of motor circuits. It operates on the magnetic principle with a current sensing coil in each of the three poles, with the trip-point adjustable from the front. MCPs are the fastest devices available for clearing low level faults and offer circuit breaker features and convenience—resettable, quick-make quick-break, deadfront and protection against single phasing.

MCPs are rated to correspond to NEMA starter size.

Current Limiter Attachment

The EL current limiter is an attachment that bolts to the load end of the MCP to provide increased interrupting capacity. The combination is UL Listed as a recognized component for application at up to 200,000A symmetrical at 600 Vac. It is coordinated with the MCP so that normal short circuits will be cleared automatically by the MCP, opening all three poles, and only the rare high fault will cause the limiter to function. Current limiters must be applied as shown in the terminal table above.

Note: Sizes 0–4 only.

Terminals

Terminals are included with both the MCP and the current limiter. Standard terminals are aluminum alloy, with non-aluminum terminals optional for use with only the MCP. Both standard and optional terminals will accommodate aluminum or copper conductors.

Note: Except 400A Size 5. Non-aluminum terminal suitable for copper only.

When using aluminum conductors, use of joint compound is recommended. Wire ranges are listed in the terminal table above.

Sizes 0–4 MCP with Current Limiter

Size 5 MCP 532500

Terminals

MCP or Limiter (Amperes)	Standard Aluminum	Optional Non-Aluminum

UL Listed

The MCP is UL Listed as a recognized component and requires additional listing by the control manufacturer in combination with a contactor and overload relay.

Modifications for MCP

These modifications must be factory installed. Consult factory for pricing.

Modifications for MCP ③

Description
Auxiliary switches ④—1A and 1B, 2As and 2Bs
Shunt trip ④
Undervoltage release ④⑤⑥
Moisture-fungus treatment

Accessories for MCP

For handle mechanisms refer to **Pages V12-T3-95–V12-T3-112**.

Note: On 400A Size 5, an external resistor is supplied for voltages, above 240 Vac and 24 Vdc.

Accessories for MCP

For MCP Size	Use Accessories For
Sizes 0–4	FB
5 (250A)	KB
5 (400A)	LB

Current Limiters

Limiter Catalog Numbers	For MCP Catalog Numbers ②
EL3003R	MCP0322R
EL3007R	MCP0358R
EL3015R	MCP03150R
EL3030R	MCP13300R

EL3100R	MCP331000R
EL3150R	MCP431550R
EL3150R	MCP431800R

Interrupting Ratings

Maximum application current shall be determined by testing the MCP in combination with a contactor and overload relay. Additional capacity can be obtained by using the current limiter attachment.

Base Mounting Hardware

No charge when ordered with MCP. Order separately when required.

Base Mounting Hardware

Description	Style Number
Sizes 0–4	21C6782G18
Size 5 (250A)	673B125G12
Size 5 (400A)	21C6782G22

Notes

- ① These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167**.
- ② Catalog numbers ending in CR were previously listed ending in RC. This is a catalog number change only, not a material change.
- ③ Not UL Listed.
- ④ Mounts only in right pole; only one Modification marked can be used in MCP (Sizes 0–4).
- ⑤ On 400A Size 5, an external resistor is supplied for voltages above 240 Vac and 24 Vdc.
- ⑥ On Sizes 0–4 and 250A Size 5, an external resistor is supplied for customer mounting, except for 120 Vac, 12, 24, 125 Vdc.
- ⑦ Also applicable to MCPs with optional terminals.

Series C 30 mA Ground Fault (Earth Leakage)

The Series C units (prefix only listed below) that included a breaker and integral Earth Leakage module have been replaced by the Series G solution that has the flexibility to add the Earth Leakage module in the field. The Series G solution has an extended range of 15–630A.

Portable Test Kit and Remote Ground Fault Trip Indicator

Portable Test Kit

Provides verification of performance of all frame sizes of SELTRONIC breakers while devices are still in service under varying load and/or phase unbalance. The tester operates on 120V, 50/60 Hz, and includes complete instructions and test times for testing the long time, instantaneous operation and optional ground fault operation of the breaker.

Portable Test Kit

Style Number

STK2

Remote Ground Fault Trip Indicator

For use only with SELTRONIC circuit breakers (LCG, HLCG, MCG, HMCG, NCG, HNCG, PCG and PCCG) with built-in ground fault protection.

Note: UL Listed as a recognized component.

The SELTRONIC ground fault indicator is a remotely mounted device with a combination indicating light/reset/test button that will light when the breaker trips on a ground fault. Tripping from overloads or short circuits will not activate the device. A separate 120V, 50/60 Hz power source is required to power the light and internal relay, which has 1NO/1NC contacts for customer connected alarm, etc. Designed for panel mounting, it can be face-mounted by ordering the optional mounting bracket below.

Remote Ground Fault Indicator

Accessories

Rear-Connected Studs

For complete stud assembly, order a stud and an appropriate tube based on thickness of customer's

mounting panel. A short stud must be assembled adjacent to a long stud to maintain clearances required by Underwriters Laboratories.

400A LA studs of the same length have sufficient clearance; however, customer connections may make it necessary to use a short stud

adjacent to a long stud. Two studs are required per pole. Refer to DS29171 Dimension Sheets for stud sizes and extensions behind breaker.

- ③ Bus spacing 3.50 inches.

Plug-In Adapter Kits

For rear-connected applications such as switchboards. Facilitates ease of installation and front removal of breaker. Includes conductor for mounting on breaker, plug-in mounting blocks with matching conductor, rear studs and mounting hardware. Order two mounting blocks style number when line and load are required; order one mounting block style number when either line or load is required.

■ Shaded area denotes obsolete or discontinued products and services. ①

Fuse Mounting Base for PB Breakers

For 2000A non-automatic breakers only.

Fuse Mounting Base for PB Breakers

Style Number

6635C78G02 ①

For use with non-automatic, three-pole circuit breaker. Includes fuse mounting base and hardware to mount standard Class L current limiting fuses, 801–2000A (fuses not included).

Note: Interrupters used with fuse mounting base will accept all standard PB accessories. See Dimension Sheet 29-171 for mounting details.

For complete installation, order:

1. Front-connected, non-automatic PB breaker. (Order similar to standard front connected, except omit load conductor extensions.)
2. Fuse mounting base.
3. Fuses (from distributor).

Handle Locks

Non-Padlockable

For prevention of unintentional operation of breaker. Fits over breaker handle and may be removed.

Padlockable

For prevention of unauthorized operation of breaker. Is non-removable once installed on breaker. Meets Underwriters Laboratories and California Code requirements.

Handle Locks

Notes

- ① Not UL Listed.
- ② One of style 625B229G08 is one package of 10.
- ③ Individually mounted.
- ④ Group mounted.
- ⑤ All breakers are trip free and will trip with handle locks attached. Cannot be used when handle extension is used.

Cable Connectors

The fuse mounting base will accept the following terminals for front cable connection (omit "T" connectors from rear connected breakers).

Cable Connectors

Wire Range, Type Number of Cables	Style Number
(3) 3/0–400 kcmil Cu	672B655G01
(4) 400–500 kcmil Cu	180C046G03

Molded Type Handle Extension**For LAB, LA and HLA Breakers** ①**Style Number****372B399G01****For MA, HMA, MC, HMC, NB, HNB, NC and HNC Breakers** ①**Style Number****1251C65G01** ②**For PB, PC, PCC and PA/RD Breakers** ①**Style Number****6635C78G02** ②**Modifications**

Only two internally mounted modifications—shunt trip, undervoltage release, auxiliary switch, alarm switch—may be mounted in EB through PB. Only one of these modifications may be mounted in FB, HFB magnetic only, two-pole EB, EHB, FB and SELTRONIC breakers. None are available in single-pole breakers except alarm switch in EB, EHB and HFB. Contact Avery Creek, NC, Technical Resource Center for possible special combinations of the following modifications not in tabulations. Contact factory for pricing if accessories are factory installed.

Shunt Trip

For tripping breaker from a remote point. A solenoid device mounts within breaker case. Breaker trips when coil is energized.

Shunt trips should not be used as circuit interlocks using maintained contact pilot devices.

A cutoff switch breaks the circuit to the momentary rated coil when the breaker opens. Available for control voltages up to 250 Vdc or 600 Vac. Voltage and frequency must be specified. Standard leads extend 18.00 inches outside the breaker. Longer leads may be specified.

Factory-Mounted Shunt Trips

Factory-mounted shunt trips only can be supplied for the following breakers: CA, HCA, CAH, HFB magnetic only and PB/PBF non-automatic breakers (molded-case switches). They are 120 Vac rated, suitable for 55% pickup for ground fault application. Right hand mounting is standard and they are not UL Listed.

Notes

- ① Not UL listed.
- ② Included with frame at no charge.

Shaded area denotes obsolete or discontinued products and services. ④

Notes

- ① 120 Vac ratings suitable for 55% pickup for ground fault applications.
- ② Not field mountable on non-automatic breakers (molded-case switches).
- ③ Field mounting voids breakers' UL listing except on LA, HLA, MA, HMA, NB, HNB, PB, KB, HKB, KA, HKA, LB, HLB and SELTRONIC breakers.
- ④ These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-168**.
- ⑤ Available similar to this except "Leads out the load end—(not UL Listed)." Order by description.

Notes

- ① Rated 48V minimum for ground fault applications.
- ② Also available for 24 Vdc. Order by description.
- ③ Not for ground fault.

Standard Undervoltage Release

For undervoltage protection. A solenoid device mounts within a breaker case. Coil must be energized before closing breaker. Trips breaker when voltage drops below 35 to 70% of coil rating. Picks up and seals in at 85% of coil rating. For line voltages up to 250 Vdc or 600 Vac. Externally mounted resistors are supplied for certain ratings. Standard leads extend 18.00 inches outside of breaker. Longer leads may be specified.

Note: Undervoltage release attachments are not designed for, and should not be used as, circuit interlocks. For further information, Contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243**.

Factory-Mounted Undervoltage Releases

All of the above undervoltage releases can be specified for factory mounting. Contact factory for pricing. These attachments have the leads out the side and are UL Listed when factory mounted unless other non-UL Listed modifications are used.

Note: Right-hand mounting is considered standard unless specified otherwise except JA, KA, DA, HKA, LB, LBB, HLB and SELTRONIC available for left-hand only. JB, KB, HKB are obsolete.

Factory-mounted undervoltage releases only can be supplied for the following breakers:

- SELTRONIC breakers (120 Vac, 60 Hz only standard), MC, HMC, NC, HNC, PC, PCC, LC, HLC
- SELTRONIC breakers with remote trip provisions, MC, HMC ②, NC, HNC ②, PC, PCC ②, LC, HLC ②
- EB ③, EHB ③, FB ③, HFB ③, FB ④⑤ and HFB magnetic only ④⑤
- No UVR available for CA, CAH and HCA

Notes

- ① Cannot be used with other attachments except a small 1A-1B auxiliary switch rated 250V can be supplied in right-hand pole.
- ② Provided with two leads (total of four) for use with a remote normally open contact (pushbutton, etc.) to trip the breaker. No external power required.
- ③ Not available on ambient compensating breakers.
- ④ Not UL Listed.
- ⑤ Right-hand mounting only.
- ⑥ Not field mountable on non-automatic breakers (molded-case switches).
- ⑦ Field mounting voids UL listing of breaker except on LA, HLA, MA, HMA, NB, HNB, PB, KA, HKA, LB and HLB.

3

Alarm Switch

Availability: EB through PC. For light or alarm indication when breaker trips. Does not function with manual operation. Automatically resets when breaker is relatched. Standard leads extend 18.00 inches outside of breaker. Longer leads may be specified. Not field mountable.

Alarm Switch Contact Rating (Non-Inductive)

- MC, HMC, LA, LAB, HLA, LC, HLC: 10A, 120 Vac; 5A, 240 Vac
- EB, EHB, FB, HFB: 5A, 120 Vac
- All other breakers: 10A, 120–240 Vac

Auxiliary Switch

For auxiliary control circuits. Miniature switches mount within breaker. Commonly used for remote indication of open or closed breaker and electrically interlocking component control circuits. "A" contacts are closed when breaker is closed. "B" contacts are open when breaker is closed. Standard leads extend 18.00 inches outside of breaker. Longer leads may be specified.

Note: Right-hand mounting standard for EB, EHB, FB, HFB, JB, KB and HKB. All others are left-hand mounting as standard unless otherwise specified.

Factory-Mounted Auxiliary Switches

All of the above auxiliary switches can be specified for factory mounting at the same price as listed for the kit. These attachments have the leads out the side of the breaker and are UL Listed when factory mounted unless other non-UL Listed modifications are used (except as noted).

Note: Right-hand mounting standard for EB, EHB, FB, HFB, JB, KB and HKB. All others are left-hand mounting as standard unless otherwise specified.

Factory-mounted switches only can be supplied for the following breaker:

- JB, LBB, LAB, JA, DA, FB[Ⓜ] magnetic only^{ⓂⓈ} and HFB magnetic only^{ⓂⓈ}

Notes

- ① Alarm switches are no longer available for these frames.
- ② Not UL Listed.
- ③ Not available for magnetic only, ambient compensating, or breakers with undervoltage release.
- ④ When alarm switch is used in conjunction with auxiliary switch, the auxiliary switch is rated 250 Vac, 5A maximum.

- ⑤ Except when other attachments are used, must be mounted in right pole.
- ⑥ Not for use on molded-case switches.
- ⑦ All switches are multiples of 1A-1B with a common electrical connection (see diagram above right).
- ⑧ Field mounting voids UL listing of breaker except on LA, HLA, MA, HMA, NB, HNB, KB, HKB, KA, HKA, LB, HLB and SELTRONIC breakers.

- ⑨ These accessories are no longer available.
- ⑩ For DC applications, refer to factory.
- ⑪ Thermal-magnetic only.
- ⑫ Auxiliary switches are no longer available for these frames.
- ⑬ Right-hand mounting only.

Shaded area denotes obsolete or discontinued products and services.

Moisture-Fungus-Corrosion Treatment

Availability: EB through PC.

Treatment can be provided to meet customer's specific atmospheric conditions. Moisture-fungus treating material used meets JAN-T-152; treatment meets MIL-V-173a. Requests and orders should specify government specifications or conditions to be met.

Note: Not UL Listed.

Mechanical Interlocks (A-C)

For mechanically interlocking a pair of breakers so that only one may be closed at one time, but both may be open simultaneously.

Note: Not UL Listed.

A. Walking Beam Type

Walking Beam

Availability: EB through PC.

Mounts on panel (not included) at rear of breaker. Standard breaker spacing: center to center; LAB, LA, LC, HLC, MA, MC, NB, NC, HLA, HMA, HMC, HNB and HNC 8.50-inch center to center; PB, PC and PCC 12.25-inch center to center; DA, JA, KA, HKA, LB, LBB and HLB 5.75 inch center to center; EB, EHB, FB, JB, KB, HFB and HKB 4.375 inch center to center. Order as a set of two special factory drilled breakers and one walking beam interlock. Specify breaker type, panel thickness and center to center dimension of breakers.

Note: Not UL Listed. 2000A maximum for PB breaker. Not available on drawout breakers.

B. Sliding Bar Type (Field Mountable)

Sliding Bar Type

Availability: HFB through PC.

Mounts on panel (not included) fitting over front of breakers. Standard breaker spacing: HLC, HLA, HMA, HMC, HNB and HNC 8.50-inch center to center; HKA and HLB 5.75-inch center to center; HFB 4.1875-inch center to center.

C. Kirk Key Interlock

Kirk Key Interlock

Availability: EB through PC.

Permits interlocking of two breakers or one breaker with other devices. Before breaker can be closed, key must be inserted and turned in breaker interlock. Breaker must be opened before key can be removed. It can then be inserted in interlock or other devices to permit their closure. Requests and orders should completely outline interlocking scheme, ultimate user and address.

Note: Not available on motor operated breakers. (No CA, LCL, FCL breakers.)

Center Studs

Center Studs

Availability: 600A frames (LA) through (NB) 1200A frames except SELTRONIC and current limiting breakers.

Provides connections for dual voltage generators, so that same trip unit can be used for protection at both voltages. At higher voltage, the trip unit carries full load current. At lower voltage, half the current bypasses the trip unit through the center studs. Trip rating cannot exceed 50% of frame rating.

Field Discharge Switch

Availability: 400, 600A frame (LA).

Breaker is used exclusively to discharge the field of a DC motor or generator, usually through a resistor. When the two outer poles open, the center pole closes.

Note: Not UL Listed.

Motor Operators

Motor operators provide complete remote control by means of a pushbutton or a similar pilot device.

Note: The pilot device must be maintained contact type for EB, EHB, FB, HFB, DA, JA, KA, JB, KB, HKB and LB mechanisms, momentary contact type for all others.

Positive switching action is accomplished by use of an operating arm engaging the breaker handle. The unit is energized momentarily to actuate the lever arm moving it to either the ON or OFF position. The control is broken by an internal cutoff switch. Means for emergency manual operations is provided.

Motor operations are available with motors rated 120 Vac, 208 Vac and 240 Vac.

Note: LA and larger available for 125 Vdc.

The 480V operators use a 120 Vac motor in conjunction with a 480/240V to 120V dual voltage transformer. (On LA and larger operators, the transformer is supplied for separate mounting by the customer.)

Note: The motor operator is intended only for infrequent operation in line with Underwriters Laboratories endurance standards for molded-case breakers. Minimum 1 kVA transformer is required for use with all motor operations.

Notes

- ① AC voltage rated operators are UL Listed as recognized components.
- ② See Dimension Sheet 29-170.

Drawout Frame

These drawout frames are for use with standard three-pole Cutler-Hammer molded-case circuit breakers. They consist of two separate parts: stationary mounting frame and movable carrier frame. Slide rails are drawer-type, and a screw mechanism is used to engage or withdraw the movable carrier frame.

The drawout frames have three positions: connected, test and disconnected. The frames do not include a safety tripping interlock or secondary contacts. These are optional items and may be ordered at additional cost.

Breakers mounted in the drawout frames can be equipped with standard breaker accessories including shunt trip, undervoltage release, auxiliary switch, alarm switch and motor operator.

Optional Features

Safety Interlock

This feature trips the breaker as the movable carrier frame is withdrawn, and must be factory installed. Order as follows.

Note: Safety interlock not available on MC, NC, HMC, HNC, LC and HLC.

For LA, MA and NB Breakers

Order standard stationary mounting frame. Order breaker and movable carrier frame assembled with safety interlock.

Secondary Contacts

These are used to disconnect auxiliary circuits when attachments such as shunt trip or motor operator are used. Available in multiples of four contacts with a maximum of 24 contacts for the LA 600 or 32 contacts for the MA and NB. They must be factory mounted. Order by description as similar to stationary or moving frame and specify number of contacts required.

Drawout Frame

Selection Data ^{①②}

Breaker Type	Stationary Mounting Frame Style Number	Movable Carrier Frame Style Number

HNB, HNC, ND, HND ^③	2603D85G01	2608D34G08
PB, PC, PCC 2000A ^④	2601D18G04	Order by description ^⑤
PB 2500A, PC, PCC 2500A and 3000A ^④	2601D18G05	Order by description ^⑤

Ordering Information

Note: SELTRONIC circuit breakers with built-in ground fault require a special breaker frame with leads out the side in place of standard terminal block. Order by description the breaker frame and carrier as one assembly.

Standard Installation

Order one stationary mounting frame and one movable carrier frame.

Order breakers without terminals or rear connectors.

Order any attachments desired (shunt trip, undervoltage release, etc.)

Order secondary contacts as required:

- A shunt trip, an undervoltage release or an alarm switch requires two contacts
- A 1A-1B auxiliary switch requires three contacts
- A motor operator requires a maximum of four contacts
- Others as required

With Safety Interlock

Order stationary mounting frame and movable carrier frame as directed under optional features.

Racking Crank

A special crank to engage or withdraw the moving portion of the drawout. A standard 0.50-inch hex socket with extension can be used for this purpose.

Racking Crank

Style Number

765A767G01

Cell Switches Mounted on Drawout Frames, All Ratings

Up to four switches can be provided. Order by description.

Each switch provides NO and NC contact that transfers before reaching the test position when being withdrawn, and after the test position when being racked in. Contact factory for pricing.

Notes

- ① Safety interlock not available on MC, NC, HMC, HNC, LC and HLC.
- ② SELTRONIC circuit breakers with built-in ground fault require a special breaker frame with leads out the side in place of standard terminal block. Order by description the breaker frame and carrier as one assembly.
- ③ These units are UL Listed.
- ④ Not UL Listed.
- ⑤ Factory installed only.

Panelboard “Only” Replacement Breaker Selection Guide

Panelboard “Only” replacement breakers are generally for use as replacement for out-of-production panelboard branch circuit breakers where both physical and electrical interchangeability is required. Where possible, consideration should be given to application of either current Series C or Series G circuit breakers.

For additional information, consult the charts on **Pages V12-T3-84 and V12-T3-85** or contact your local Eaton Field Sales office or the Breaker Service Centers.

Replacement of all out-of-production panelboard circuit breakers are designated by the easily identifiable addition of an “R” prefix to the out-of-production circuit breaker catalog number that they replace.

An Example:

RHF3100 is a newly manufactured, three-pole, 100A trip panelboard replacement breaker for an out-of-production **HF3100**.

R Designates new panelboard “only” replacement breaker.

HF Identifies the out-of-production circuit breaker frame.

3 Number of poles.

100 Trip ampere rating.

Notes:

- Panelboard “only” replacement circuit breakers have non-interchangeable trip units and the same interrupting capacity as the out-of-production circuit breakers that they replace.
- The RE breaker has off-center terminals just like the E breaker it is replacing.
- For out-of-production breakers, the “B” suffix denotes 277 Vac rating for the panelboard replacement breaker. (Example: RE3020B)
- Some panelboard “only” replacement breakers do not have the same physical dimensions or mounting holes as the breakers that they replace. For example, the types REH and RHFA are 6.00 inches in length and the breakers that they replace, EH and HFA, are 6.50 inches in length.
- Panelboard “only” replacement breakers can be installed in the following styles of out-of-production Westinghouse panelboards:

6. ABH	NEB
A2B	NHDP
NHEB	NH1B
NA1B	NLAB-AB
NA1B-LX	NLAB-ABH
NDP	

Notes

- ① Last manufacture date—1974.
- ② Last manufacture date—1967.
- ③ These frames are obsolete. For replacement solutions, see the cross-reference on **Pages V12-T3-114–V12-T3-167** or call 803-481-6843 for other panelboard solutions.

50°C Calibration

Add suffix “V” to catalog number for breakers to be used in 50°C ambients. Same price as standard 40°C breakers.

Note: Not UL Listed.

Special Breakers

Magnetic only (includes load terminals). Available for all ampere ratings for two- and three-pole RJ, RK, RKL, RLM, RHK, RHKL and RHLM.

High magnetic molded-case switches (K suffix) are available to replace out-of-production non-automatic breakers (N suffix).

Note: Not UL Listed.

Panelboard and Switchboard Replacement Breaker Ordering Instructions

1. Choose the breaker frame and amperage.
2. Select the proper connector kit (if needed).
3. Call your local distributor with catalog numbers and request Eaton's Free Express Service.

Replacement Capabilities

Cutler-Hammer motor control center replacement circuit breakers are newly manufactured and tested to the latest applicable standards at the Eaton molded-case circuit breaker plant in Beaver, PA. This plant has a long and well-recognized tradition of product safety, integrity and quality.

The motor control center replacement circuit breaker solution eliminates the need to consider alternative approaches. Eaton customers are ensured that the high standards of product quality and reliability do not have to be sacrificed when replacing Westinghouse out-of-production circuit breakers.

All motor control center replacement circuit breakers are easily identified by the prefix "RMC" added to the out-of-production type circuit breaker catalog number they replace.

Replacement Chart

Current MCC Circuit Breaker Type	Out-of-Production Circuit Breaker Type ^①	Volts AC (50/60 Hz) 600
RMCF	FA	■
RMCFHA	HFA	■
RMCF	F	■
RMCHF	HF	■

Replacement Motor Control Center Breakers

Motor Control Center Replacement Breaker Interrupting Ampere Ratings

Breaker Type	Ampers	240 Vac	480 Vac	600 Vac	250 Vac
RMCF ^{②③}	15–100	18,000	14,000	14,000	10,000
RMCFHA ^{②③④}	15–150	18,000	14,000	14,000	10,000
RMCHF ^{②③}	15–100	65,000	25,000	18,000	20,000
RMCFHA ^{②③④}	15–150	65,000	25,000	18,000	20,000

Example:

An **RMCF3100** is a newly manufactured, three-pole, 100A trip panelboard replacement circuit breaker. It replaces an out-of-production F circuit breaker.

Example:

- RMC** Designates new motor control center replacement circuit breaker.
- F** Identifies the out-of-production circuit breaker frame.
- 3** Number of poles.
- 100** Trip unit ampere rating.

Contact **1-800-OLD-UNIT** for replacement or **Page V12-T3-91** for Series C retrofit kits.

Notes

- ① Last manufacture date—1974.
- ② Motor control center replacement breakers do not have the same physical dimensions or mounting holes as the breakers they replace. Types **RMCFHA** and **RMCFHA** are 6.00 inches long and the breakers they replace, **FA** and **HFA**, are 6.50 inches long. Types **RMCF** and **RMCHF** are 6.00 inches long and the breakers they replace, **F** and **HF**, are 9.375 inches long. A mounting plate is provided with each breaker to resolve these differences, and must be installed to ensure a proper fit.
- ③ Motor control center replacement circuit breakers have non-interchangeable trip units and the same interrupting capacity as the out-of-production circuit breakers they replace.
- ④ **RMCFHA** and **RMCFHA** two-pole breakers are supplied in a three-pole frame with current carrying parts omitted from the center pole.

Type RMCHFA

Type RMCHF

Technology Upgrades

Series C Retrofit Kits

Series C Retrofit Kits are to be used to upgrade existing Type W and 5 Star motor control center units by changing out the old breakers with new Series C models. These kits can be applied to both starter and feeder units.

Some of the breakers that these kits will upgrade include:

- MCP, F, FA, FB, HFB, K, KA, KB, HKB, L, LA, LB and HLB breakers

5 Star Series C Retrofit Kit

5 Star Series C Retrofit Kit

The 5 Star Series C retrofit kit includes:

- Series C device, 65 kA (either HMCP or thermal-magnetic breaker)
- Operating handle, including tripped indication and push-to-trip mechanism
- Label stating that the MCC unit has been retrofitted with Series C device suitable for 65 kA (similar to UL quality label)
- Templates for desired frame size
- Assembly instructions

Customer benefits:

- Ease of ordering—one catalog number for all required parts
- Series C technology—higher AIC rating
- All new components associated with the breaker, including new stab assembly, operating mechanism and door, if required

Type W Series C Retrofit Kit

Type W Series C Retrofit Kit

The Type W Series C retrofit kit includes:

- Series C device, 65 kA (either HMCP or thermal-magnetic breaker)
- Operating handle, including tripped indication and push-to-trip mechanism
- Label stating that the MCC unit has been retrofitted with Series C device suitable for 65 kA (similar to UL quality label)
- Templates for proper hole placement for desired frame size
- Series C breaker mounting hardware
- New door and hardware
- New stab assembly
- Assembly instructions

310+ Electronic Trip Unit

The 310+ electronic trip unit has advantages and upgraded features over the Series C 310 electronic trip unit as follows:

- Adjustable I_r continuous current setting eliminates the need for rating plugs
- Cause of trip information can be extracted from the breaker
- Zone selective interlocking option for breaker coordination
- Ground fault alarm only option to keep critical equipment on-line when a ground fault is present
- Arcflash Reduction Maintenance System™ to improve worker safety

Note: Available only for the LG, NG, RG/RD 310+ models.

The 310+ electronic trip unit is available for the following MCCB breakers:

- Series C FDE
- Series G JG
- Series G LG
- Series G NG
- Series G RG
- Series C RD (available as a field retrofit kit)

Series C to Series G Upgrades

The Series C 250A JD and 600A LD breakers are being replaced by Series G 250A JG and 600A LG breakers respectively. There are several advantages in moving from these Series C to Series G breakers.

Series G 250A JG Molded-Case Circuit Breaker

- Smaller breaker footprint than Series C JD
- Breaker is dual rated, UL and IEC
- Interruption ratings up to 200 kAIC at 480 Vac
- Accessories are field installable thru-cover
- Now available with an electronic, 310+ trip unit
- Can accommodate the ANSI C12.1 Power Monitoring/Metering Module (PM3)

Series G 600A LG Molded-Case Circuit Breaker:

- Smaller breaker footprint Series C LD
- Breaker is dual rated, UL and IEC
- Interruption ratings up to 200 kAIC at 480 Vac
- Accessories are field installable thru-cover
- Upgraded from 310 electronic trip unit to a 310+ electronic trip unit
- Can accommodate the ANSI C12.1 Power Monitoring Metering Module (PM3)

Advantages of 310+ Electronic Trip Unit Technology Versus the 310 Electronic Trip Unit:

- Adjustable I_r continuous current setting eliminates the need for rating plugs
- Cause of trip information can be extracted from the breaker
- Zone selective interlocking option for breaker coordination
- Ground fault alarm only option to keep critical equipment on-line when a ground fault is present
- Arcflash Reduction Maintenance System to improve worker safety (not available in the JG 310+ electronic trip unit)

F10 Series C Retrofit Kit**F10 Series C Retrofit Kit**

The F10 Series C retrofit kit includes:

- Series C device, 65 kA (either HMCP or thermal-magnetic breaker)
- Operating handle mechanism, including tripped indication push-to-trip
- Label stating that the MCC unit has been retrofitted with Series C device suitable for 65 kA (similar to UL quality label)
- Templates for desired frame size
- Assembly instructions

Series C Retrofit Kit Catalog Numbering System

3

How to Order

Step 1: Select the correct Series C molded-case circuit breaker from the table on **Page V12-T3-92** or the Series C motor circuit protector from the table on this page.

Step 2: Create a catalog number based on the MCC type, device selected, modifications, door size and device panel.

Step 3: Select price from PL04304002E.

OPTIM 550 Trip Units for Upgrading Thermal/Magnetic Trips

Digitrip OPTIM 550

Replacement of the OPTIM 550 trip units and the associated accessories allows a customer to easily upgrade an existing Series C, K- or L-Frame molded-case circuit breaker equipped with a standard thermal-magnetic trip unit, without the need to purchase a new circuit breaker.

Key features and benefits of the OPTIM 550 trip unit include:

- 10 set points providing for premium protection and coordination
- Cause-of-Trip indication (LEDs and digital memory)
- Load monitoring to provide information for energy management
- Diagnostics to assist in system troubleshooting
- Communications and zone interlocking options—field or factory installed

Cutler-Hammer PowerNet™ and Zone Interlock Kits (OPTIM 550 Only) K-, L- and N-Frames

PowerNet Communication Kit

The Cutler-Hammer PowerNet communications kit can be ordered to add PowerNet communications to an existing OPTIM 550 breaker in the field. An 18.00-inch wiring pigtail is routed to the rear of the breaker: two wires for PowerNet and two wires for 24 Vdc (45 mA load). It is recommended that the power supply be an “isolated high quality” unit.

Notes

① Includes a ground fault alarm signal that can drive the ground fault alarm unit (catalog number GFAU).

Instruction leaflet numbers (K) 29C506, (L) 29C897, (N) 29C898.

Handle Mechanisms

■ Shaded area denotes obsolete or discontinued products and services.

MCCB Handle Mechanism Introduction

Eaton offers a broad range of handle mechanisms for molded-case circuit breakers. Each of these has been designed specifically for safe, dependable operation and ease of installation.

Handle mechanisms are used in a wide variety of applications including enclosed molded-case circuit breakers, control panels and motor control centers.

Whether replacing a damaged handle mechanism with a like unit, switching from fuses to circuit breakers in order to limit downtime, or upgrading to take advantage of the many benefits associated with applying communicating, programmable molded-case circuit breaker technology, Eaton has the handle mechanism solution that is right for you.

Notes

① For application only with Series C molded-case circuit breakers and HMCPs.

② Series C F-Frame includes EHD, ED, FDB, FD, HFD and FDC designations.

Vari-Depth Type

General purpose vari-depth handle mechanisms are suitable for use with Type 1 fabricated enclosures. They are designed for use with breakers or disconnect switches when used in deep enclosures.

Required for a standard application are a padlockable operating handle, a shaft and a mechanism. Two variable depth shafts are offered to better cover the wide range of depths of various enclosures...these are referred to in the table as the standard and the long shaft. The dimensions for panel depth given in the following

table are from the mounting surface of the breaker or the disconnect to the inside of the enclosure cover.

Standard mechanisms do not include an internal lockoff device. Mechanisms with this feature are, however, offered as an optional item. The internal lockoff provides a means of padlocking the breaker or the switch in the OFF position while the enclosure door is open.

These mechanisms may also be used in conjunction with Type 4, 7 and 9 cast enclosures. When used with these enclosures, the special handle kits shown as accessory items must be

ordered in place of the standard handle.

The adapter bushing, a component of the special handle kit, may be ordered separately.

Notes

- ① Includes hardware.
- ② When used with plug-in adapter kits or rear-connected studs, special mounting hardware is required. Refer to Eaton.
- ③ UL File No. E56845 Vol. 1 Section 4.
- ④ Extra long shaft includes support bracket for Series C F-Frame with no internal lockoff. Order 373D958G24, which includes the mechanism, shaft and bracket. Order handle separately. Panel depth 16-3/8-24-1/4.
- ⑤ Mechanism style includes a handle and a standard shaft. A long shaft may be ordered separately if required.

Vari-Depth Type

Special Handles

Meet **Type 4 sheet steel requirements**. These handles are similar to standard handles, except they include an internal neoprene gasket. Due to gasketing effect between handle and housing, handle will not indicate a tripped position when used with circuit breakers.

UL File No. E56845 Vol. 1 Section 4.

Handle Kits

These kits are for use with **Type 4, 7 and 9 cast enclosures**. They include a special operating handle, mounting bolts and an adapter bushing (bushing may be purchased separately). Kits may be used with standard mechanisms and shafts. Instruction drawing **314C809** applies for assembly.

Handle Kits

Handle Kits

Description	Style Number
Standard finish	504C323G08
For Type 4, 9 enclosure	314C794G10
For Type 7 enclosure	314C794G09
Adapter bushing only	314C794G04

Slide Plate Type

These compact slide plate handle mechanisms are especially designed for use with AB DE-ION circuit breakers and disconnect switches when they are mounted in a shallow enclosure. They are suitable for use on Type 1 applications.

Because of the mechanisms' simplified installation—three mounting holes—and preassembled construction, these units are commonly used where high volume, standardized enclosures are being fabricated.

The mechanism styles listed on this page are for use on enclosures that have covers hinged on the right side. If these mechanisms are used on enclosures that have covers hinged on the left side, the door interlock will not function.

Notes

- ① Does not padlock in OFF position. Type 3R version available as special. Contact Avery Creek, NC, Technical Resource Center.
- ② Handle mechanisms cannot be used on Visi-Flex switches with 200A fuse kits.

Outdoor or Hazardous Type

This handle mechanism is designed for use with fabricated or cast, Type 3, 4 or 5 enclosures. A butterfly cam type mechanism may be used on enclosures with either right- or left-hand hinged covers or on enclosures with bolted covers. The mechanism has a provision for padlocking. Will accept up to three locks. Assembly of this mechanism is accomplished by welding it to the enclosure door or the cover. Refer to IL29C287 for drilling plan. For PB, PC and RD, refer to drawing 372D690.

Type SM Safety Handle

Enclosed Breaker with SM Handle

Type SM safety handle mechanism is designed to prevent tampering by unauthorized individuals and provides the optimum in personnel safety. When properly applied, these mechanisms conform to Type 12 and J.I.C. requirements, and are well-suited for use by the automotive and machine tool industries.

Completely preassembled in a rugged cast housing, the Type SM safety handle mechanism includes a predrilled mounting plate for simplified customer installation. Standard handles are 5.125 inches long and can be padlocked in the OFF position with as many as three padlocks. A shorter handle 3.875 inches long can be supplied on SM100, SM101 or SM150 mechanisms when specified.

All Type SM safety handle mechanisms can be used on any size enclosure. Order handle mechanism from the table at right, plus desired door hardware for complete application. Dress nameplate required to meet automotive specifications is available from accessories section.

Notes

- ① Enclosure cover hinged on left.
- ② Enclosure cover hinged on right.

Type MC Motor Control

225A Mechanism

Type MC handle mechanisms are linear drive, fixed depth mechanisms designed for through-door mounting in standardized or shallow depth enclosures such as motor control centers or enclosed circuit breakers.

Mounting directly to the front of the disconnect, these mechanisms provide positive operation and handle indication. Both disconnect and mechanism mount simultaneously with mounting hardware supplied with the mechanism.

For security, the handle can be padlocked in the OFF position with up to three 0.375-inch hasp padlocks. Also, the mechanism is interlocked with the enclosure door so that the disconnect must be OFF before the door can be opened. A defeater is provided to bypass this interlock.

Catalog numbers listed include the mechanism, mounting hardware and door interlock clip.

Further Information

Publication Number	Description
IL 29C277	AMT Vari-Depth Handle Mechanism

Notes

- AMTR is rod only; AMTRI is rod and brace assembly.
- Complete assembly not available, order components parts listed above.
- Also for use with equivalent HMCP Frame.
- For switches using 30, 60, 100A, 600V NEC Class H, R or J fuses.
- For switches using 30, 60, 100A, 250V NEC Class H or R fuses.
- AMTR and AMTRB1 for use with enclosure depth of 6.50–14.25 inches. For 12.25–18.25 inch depth, use optional AMTRB2. For 18.00–24.00 inch depth, use optional AMTRB3.

- Requires adapter kit shown in Door Hardware Adapter Kit table.
- For standard door hardware description, see **Page V12-T3-102**.
- Required on standard door hardware only when used with any AMT handle mechanisms.
- Kit consists of special door hardware and door interlock pin. Available for right-hand flange mounting only.
- For use with AMT fixed width mechanisms only.
- 2-point latch for use with panels up to approximately 40.00 inches high.
- 3-point latch for use with panels approximately 40.00 inches and higher.

AMT Vari-Depth Vari-Width Type— Type AMT for Above Handle Mounting

The Type AMT is an extra heavy-duty handle mechanism designed for mounting in flange-type enclosures, and has provisions for mounting in various depth enclosures and for varying the width relationship between the disconnect device and the external handle.

A door interlock is provided to prevent opening the enclosure door with the disconnect in the ON position or to close the disconnect with the enclosure door open. The external handle can be locked in the OFF position with up to three padlocks. The AMT mechanism is supplied for mounting in right-hand flange enclosures but can be easily converted for left-hand mounting.

AMT mechanisms are available for above the handle mounting or below the handle mounting. Mechanisms for below the handle mounting are also available as fixed width units. When door hardware is used with an AMT handle mechanism, a door hardware adapter kit is required.

Accessories

Spacer kit to Vari-Width (not for use with fixed mechanisms) catalog number AMTSK1 for up to 1.00-inch variation.

Note: This spacer kit is for up to 1.00-inch variation and consists of multiples of thin spacers to be used as required. A maximum of two kits per installation may be used. Due to the possible variation in dimensions, hardware is not supplied. Use standard 1/4–20 bolts.

- ③ Width spacer kit not included.
- ④ This spacer kit is for up to 1-inch variation and consists of multiples of thin spacers to be used as required. A maximum of two kits per installation may be used. Due to the possible variation in dimensions, hardware is not supplied. Use standard 1/4–20 bolts.
- ⑤ Also for use with equivalent HMCP Frame.
- ⑥ For switches using 30, 60, 100A, 600V NEC Class H, R or J fuses.
- ⑦ For switches using 30, 60, 100A, 600V NEC Class H or R fuses.

Accessories

Spacer kit to Vari-Width (not for use with fixed mechanisms) catalog number AMTSK1 for up to 1.00-inch variation.

Note: This spacer kit is for up to 1.00-inch variation and consists of multiples of thin spacers to be used as required. A maximum of two kits per installation may be used. Due to the possible variation in dimensions, hardware is not supplied. Use standard 1/4–20 bolts.

Ordering Information

- Complete assembly not available, order components parts as listed on **Pages V12-T3-104, V12-T3-105 and V12-T3-106**
- Order spacer kits or door hardware adapter as required
- Individual component parts may be ordered by catalog number

Flex Shaft

Flex Shaft

The Flex Shaft is an extra heavy-duty mechanism that includes a flexible shaft in various lengths, 3 feet (0.9m)

through 10 feet (3m) for use with various size enclosures.

The Flex Shaft handle will accept up to three padlock shackles, each with a maximum diameter of 0.375-inch (9.5 mm). Can be used with Type 1, 3R and 12 fabricated enclosures. An optional handle is available for Flex Shaft that is suitable for use with Type 4 and 4X environments. Flex Shaft comes preset from the factory, requiring only minor field adjustments on installation, which takes about 10 minutes—

a significant time savings compared to installation of other types of flange handle mechanisms. The Flex Shaft mechanism also takes up less interior enclosure space than competitive designs and the handle fits standard flange cutouts. Flex Shaft handle can be remotely mounted from breaker, where an operator can use it by “funneling” the cable through conduit.

Flex Shaft is UL Listed under File E64983 and meets CSA requirements.

Flex Shaft Accessories (F- through R-Frame)

NEMA 12 Safety Door Hardware for Flex Shaft ④

Handle Length in Inches (mm)	Catalog Number ⑤
4.00 (101.6)	C361KJ4
6.00 (152.4)	C361KJ6
Roller latch ⑥	C361KR

Notes

- Type 4/4X handle mechanisms are available. Add Suffix **X** to complete catalog number. Add Suffix **I** to complete catalog number for IEC handle. Add Suffix **L** (Standard on F, J, K and L) to complete catalog number for 6.00-inch (152.4 mm) handle. Original narrow handle design (no **C** suffix) is available. Remove **C** from catalog number.
- When selecting the length of shaft, ensure minimum bending radius of 4.00 inches (101.6 mm) is maintained to operate properly. The standard method of shipment includes the mechanism preset at the factory; however, minor field adjustments may be required.
- Dual breakers operator available on F-Frame only.
- Customer: Consult with box manufacturer for correct door hardware and any adapters required for assembly.
- The 0.25 inch x 0.50 inch (6.35 x 12.7 mm) standard mill rectangular locking bar is not supplied with these kits.
- Third roller latch for use with 4.00- or 6.00-inch (101.6 or 152.4 mm) handle when 3-point latching is required.

Refer to handle mechanisms in the molded-case circuit breaker section of Volume 4—Circuit Protection Catalog, CA08100005E, Tab 2.

The Type C371 circuit breaker operating mechanisms are designed for installation in control enclosures where main or branch circuit protective devices are required. All circuit breaker mechanisms are suitable for right-hand mounting.

Auxiliary contacts are not available for mounting on operating mechanisms. Where required, have them installed in circuit breaker.

Type C371 is UL Listed under File E62635.

Notes

- ① For increased maximum allowable depth, see connecting rods table to the left.
- ② Dimensions shown are from panel flange surface.
- ③ Does not include handle.
- ④ For use to prevent bending of the operating handle mounting surface. This is especially useful when the operating handle is mounted on a channel in a multi-door enclosure. Included in 600–1200A.
- ⑤ Increase maximum allowable depth by 5.00 inches (127.0 mm).

Refer to handle mechanisms in the molded-case circuit breaker section of Volume 4—Circuit Protection Catalog, CA08100005E, Tab 2.

Series C Rotary and Universal Rotary

Series C Rotary

Series C rotary and universal rotary handle mechanisms are for use with molded-case circuit breakers (G, F, J, K, L, MDL), molded-case switches and motor circuit protectors.

Series C rotary is suitable for use with Type 1, 3R, 12 and 4/4X enclosure types. Type 4/4X application requires special handle, see "Ordering Information."

The universal rotary is suitable for use with Type 1 and 12 enclosure types. All rotary handle mechanisms include a handle "Lock Off," to prevent turning the breaker ON while in the OFF position. All rotary handles indicate ON/OFF/Tripped/Reset positions; however, Universal Rotary has the added feature of international markings for ON (I) and OFF (O). Series C rotary handle is metal. Universal rotary is made of molded material. Series C rotary handle is black and universal rotary is available in black or yellow/red.

Series C rotary handle was ergonomically designed with extra clearance for a "gloved hand" to operate. Handle has a 45° rotation. Universal Rotary has a 90° rotation ("pipe valve" operation) where ON is vertical and OFF is horizontal. Shafts include a support brace to ensure proper alignment.

In addition, the 16.00-inch (406.4 mm) and 24.00-inch (609.6 mm) extra long shafts include an adjustable support bracket.

Series C rotary and universal rotary, are UL Listed and meet CSA requirements. Universal rotary also meets IEC947-1/2 for international compliance. Rotary UL File Number is E64983.

Notes

- ① Complete catalog number includes the standard handle, mechanism, shaft and support brace/bracket.
- ② Handle is designed suitable for Types 1, 3R and 12 enclosures. Use style number **6648C22G03** for Type 4/4X handle or add **X** Suffix to complete catalog number.
- ③ Breaker mechanism includes a shaft support bracket and its parts.
- ④ Longer shafts, 16.00-inch (406.4 mm) and 24.00-inch (609.6 mm), include an adjustable support extension.
- ⑤ IEC handle mechanism supplied with metric thread mounting hardware.
- ⑥ Complete catalog number includes a handle, mechanism and shaft.

Refer to handle mechanisms in the molded-case circuit breaker section of Volume 4—Circuit Protection Catalog, CA08100005E, Tab 2.

Universal Rotary**Universal Rotary**

Type 4/4X handles are similar to standard handles except that they include an internal neoprene gasket. Type 4/4X handle style number is 6648C22G03. Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

Series C Rotary Accessories

As an option, an auxiliary switch is offered so that the control panel builder may electrically indicate the status of the breaker. This accessory would be mounted on the mechanism and comes with 24.00-inch (609.6 mm) pigtail leads.

Direct (Close-Coupled) Handle Mechanisms

Universal Direct

Euro IEC Direct

G Direct

Direct (close-coupled) handle mechanisms mount directly to the circuit breaker. They are used in shallow enclosures where the standard variable depth through-the-door type mechanism is not practical or cannot be used. They are typically for applications where high volume, standardized enclosures are being fabricated.

The Universal Direct handle mechanism is designed exclusively for the new Cutler-Hammer E125 and J250 circuit breakers. It is available as standard with a door interlock to prevent opening the enclosure while the circuit breaker is in the ON position. It is also available without a door interlock.

The Euro IEC Direct handle mechanism can be used on F- through R-Frames.

The G Direct is available with a black or a yellow handle, and with or without a shroud. It is suitable for use with Type 1 enclosures. It is for use only with the G-Frame (GD, GC, GHC, GMCP).

An escutcheon ring and an interlock clip are provided as standard. The standard design includes a lock-off feature.

The Universal Direct handle mechanism is UL 489 Listed, IEC947-1/2 and meets CSA requirements. The Euro IEC Direct handle mechanism is IEC-240-1. G Direct is UL Listed and meets CSA requirements.

Replacement and Service Capabilities**Breaker Service Center Factory Service for Mining and Industrial Molded-Case Circuit Breakers**

Eaton owns and operates two fully authorized Breaker Service Centers (BSC) in Skelton, WV, and Evansville, IN. They are available to support all non-warranty service needs for Cutler-Hammer industrial molded-case breakers 600A and above and all frames of mining duty breakers.

The Breaker Service Centers, as extensions of our manufacturing plants, are the only facilities authorized to provide breaker service solutions for Eaton, Cutler-Hammer and historic Westinghouse molded-case circuit breakers. Staff are dedicated to providing genuine factory-supported solutions to our customers.

This is just another example of how Eaton supports a complete offering of solutions for circuit breakers.

See the following for the benefits of choosing the BSC and our service offerings.

Offerings**Basic Tune-Up**

Clean, test and re-certify.

Basic Modification

Replace accessories and attachments including terminals, trip units, UVRs, shunt trips and auxiliary switches.

Basic Service

Replace components including covers, handles and stationary contacts.

Custom Service

Replace frame or trip unit, with or without accessories.

Full Service

Replace both frame and trip unit, with or without accessories.

Factory Modifications

For new or existing operational breakers

- Trip unit upgrades
- Addition of accessories and attachments
- UL modifications to factory-sealed breakers

Facilities

- Dedicated sites supported by engineering and manufacturing
- Staffed by factory trained technicians with experience servicing molded-case circuit breakers
- State-of-the-art cleaning and testing equipment

The Breaker Service Centers are open to help you. Give us a call at **1-877-BRK-SRVC** or contact your local Eaton authorized distributor or sales office for more information.

Know What You're Getting—Here's the Reality of Third-Party Repair

- Breakers are serviced using least worn, counterfeit or reverse engineered components
- You get no technical support from the original manufacturer
- There is no option for an upgrade to new technology
- You could end up with a breaker that doesn't perform as expected

Reasons to Use Eaton's Breaker Service Centers

- Eaton is a world leader in circuit breaker technology and manufacturing
- The Breaker Service Centers are staffed by factory trained technicians
- One year warranty.
- Eaton uses only genuine replacement parts and components
- Full engineering support—original product specifications and manufacturing data
- State-of-the-art cleaning equipment—uses a non-destructive cleaning process while maintaining integrity of the breaker
- Modern test equipment—the breaker service center uses the same hi-tech test equipment used by engineering, development and manufacturing facilities. This allows the breaker service center to match original test conditions at the factory
- Exchange option—we can upgrade to the newest technology
- Competitive price—all the benefits of third-party prices

For more information on Eaton products and services, call 1-877-386-2273. Select option 1 for technical support and select option 6 for Eaton's Electrical Services & Systems, or visit our website at www.eaton.com/electrical.

Notes for Replacement Breaker and Mining Breaker Replacement Tables (Pages V12-T3-113–V12-T3-167)

- Many of the suggested Series C replacements are electrical replacements only, and may have different dimensions, mountings, handle forces and throw (which would require a handle mechanism change). The MARK 75 replacement would have the same dimensions, mountings, handle forces and throw. Only three-pole MARK 75 available.
- Replacement breaker frames, trips, plugs and some of the terminals and attachments are not interchangeable with the Series C. Obsolete frames and trips, etc., may require a complete breaker change.
- Replacing with a Higher IC MARK 75 or Series C breaker does not increase the IC rating of the assembly (panelboard, switchboard, etc.).
- Saf-T-Vue is no longer available on the replacement breaker line. Eaton Canada does make the Series C with Saf-T-Vue and may be sourced through our **Canadian Distribution Center** at **905-631-4318**.
- Suggested replacements also apply to breakers that had suffixes such as "L," line and load terminals, "V" 50C calibration and "W" without terminals.
- The HFB two-pole breaker is on a three-pole frame. The Series C replacement is a true two-pole.
- Continuous amperes and/or trip range may be a little different on the replacement Series C.
- Replacement breaker MARK 75 breakers with interchangeable trip units are to be supplied as frame, trip, terminals and attachment as separate items (except when accessories must be factory installed). No single-phase, ambient compensated, Saf-T-Vue, reverse-feed, or SELTRONIC magnetic only are available on replacement breakers.
- JA, DA, KA, HKA, LB, LBB and HLB breakers when replaced with a Series C breaker "K" frame, when bussed on the line side such as a panelboard, requires a TAD3 spacer kit.
- Contact the local Eaton Satellite for complete panelboard replacement or new interior replacement. Use Panelboard Replacement Breakers where possible. MARK 75 and three-pole only replacements are available. Contact the **Breaker Service Center** at **1-877-275-7782** for reconditioned breaker solutions.

Note: If accessories are to be factory installed, contact the factory for pricing.

Product Description

Panelboards and switchboards are enclosed assemblies for lighting and distribution that accept incoming power and consist of a series of circuit breakers and/or fusible switches. These devices protect each circuit by providing overcurrent and short-circuit protection.

4

Product History

In 1994, Eaton acquired the Distribution and Control Business Unit (DCBU) of Westinghouse and integrated it with their Cutler-Hammer® business unit forming a powerful new combination. This product history tracks the evolution of panelboard and switchboard products for both manufacturers.

In the 1920s, prior to the development of circuit breakers, Westinghouse sold panelboards designed for main and branch circuit fuses. Circuit breakers were first introduced in 1927 and put Westinghouse in the forefront of circuit breaker technology. A few years later the first Westinghouse “NOFUSE” circuit breakers were introduced. “NOFUSE” panelboards were initially available in ratings up to 225A at 250V. Panelboards were designed at higher ratings as circuit breakers’ ratings became available. By 1958, panelboards were available at ratings up to 800A and 600V.

The most significant panelboard types were the CDP and FDP panels. For more than 34 years, these two types encompassed most Westinghouse molded-case circuit breakers and fusible switches.

In 1962, Eaton’s electrical business entered the panelboard and switchboard market with the purchase of Mullenbach. Soon after the Mullenbach acquisition, Cutler-Hammer entered into an agreement with Westinghouse to supply breakers and fusible devices for panelboards and switchboards, and Eaton also began manufacturing Westinghouse-type panelboards under the agreement. This relationship made in the early 1960s provided users of both trade name products access to aftermarket service for add-on branch devices and hardware. Classic Cutler-Hammer panelboards and switchboards were designed and listed for use with Westinghouse breakers.

In 1988, Westinghouse redesigned the panelboard and switchboard line to incorporate the new Series C® design breakers. This new design became a true family of products. These new panelboards and switchboards became today’s Pow-R-Line® family, which are manufactured in state-of-the-art facilities strategically located throughout the United States.

Eaton’s unique Satellite Plants support aftermarket services for all current Pow-R-Line panelboard and switchboard products. Aftermarket service for out-of-production panelboards and switchboards for both the classic Westinghouse and Cutler-Hammer designs is supported by the **Aftermarket Center in Sumter, SC**, (see **Page V12-T4-22**), and is staffed with experienced and knowledgeable representatives.

Replacement Capabilities

How to Select Replacement Breakers

A complete line of new, UL® Listed products, physically and electrically interchangeable molded-case circuit breakers is offered by Eaton.

To properly select the breaker for your existing panelboard:

1. Identify the panel type and the existing branch breaker.
2. Select the appropriate breaker from the direct replacement solution column. As shown, three options are available.

Option 1: Series C breakers are available as direct replacement for installation in Cutler-Hammer panelboards. They are available at your local distributors and are the most economical solution.

Option 2: Original, but still-in-production breakers, (sometimes referred to as replacement breakers) are available from Eaton national warehouses. These are identical to the existing branch breakers.

Option 3: Panelboard replacement breakers, available for out-of-production molded-case breakers, are physically and electrically interchangeable with the existing breaker. Available in three-pole only. Refer to **Pages V12-T3-80** through **V12-T3-87** for further information.

3. For additional information, contact Avery Creek, NC, Technical Resource Center at **1-800-356-1243** or your local Eaton Satellite plant.

CDP

Originally a Westinghouse Product

Westinghouse CDP

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of molded-case circuit breakers into your existing CDP panelboards.

- Determine the amount of space available in the panelboard for adding circuit breakers. 1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of breaker needed for the required ampere rating and number of poles

Ratings

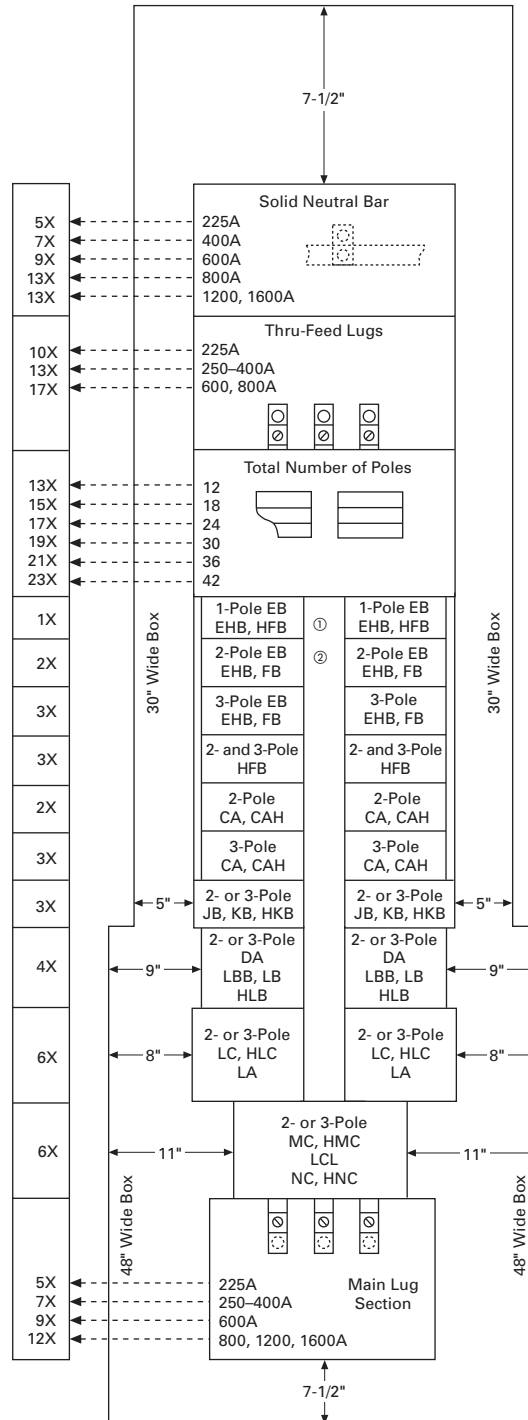

- 1600A maximum

Replacement Capabilities

Breakers

Refer to renewal parts data RP01400002E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Contact the Aftermarket Center in Sumter, SC (see **Page V12-T4-22**).

CDP Panel Layout

**One X space = 1.38 inches (35.1 mm).
Blank fillers are required for unused X space.**

Notes

- ① When only one EB, EHB or HFB single-pole breaker is required in conjunction with other frame size breakers, the single-pole breaker space required changes from 1X to 2X.
- ② Must use three-pole connector kit.

FDP

Originally a Westinghouse Product

Westinghouse FDP

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of fusible switches into your existing FDP panelboards.

- Determine the amount of space available in the panelboard for adding fusible switches. 1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of fusible switch needed for the required ampere rating and number of poles

Ratings

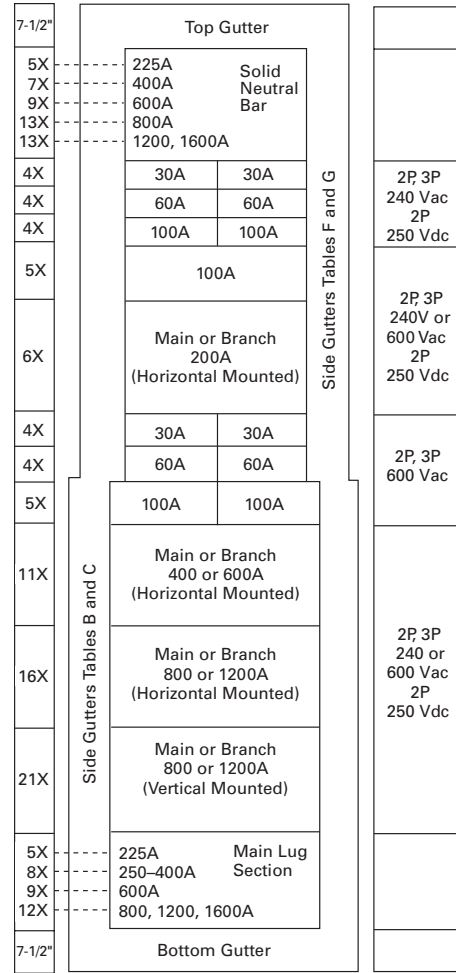

- 1600A maximum

Replacement Capabilities

Fusible Switches

Refer to renewal parts data RP01400002E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Contact the Aftermarket Center in Sumter, SC (see **Page V12-T4-22**).

FDP Panel Layout

One X space = 1.38 inches (35.1 mm).
Blank fillers are required for unused X space.

FDP and CDP Bus Dimensions

PB/PH/PH-L
*Originally a
 Cutler-Hammer Product*

**15 or 21 Inches Wide
 Cutler-Hammer PB**

**21 Inches Wide
 Cutler-Hammer PH-L**

Ratings

- **PB**
 400A maximum
- **PH**
 800A main lug only or
 600A main breaker
- **PH-L**
 225A maximum

Replacement Capabilities

Breakers

Refer to renewal parts data RP01400003E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Contact the Aftermarket Center in Sumter, SC (see **Page V12-T4-22**).

**21 or 26 Inches Wide
 Cutler-Hammer PH**

MP40

Originally a
Cutler-Hammer Product

Cutler-Hammer MP40

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of molded-case circuit breakers into your existing MP40 panelboards.

- Determine the amount of space available in the panelboard for adding circuit breakers. 1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of breakers needed for the required ampere rating and number of poles

Ratings

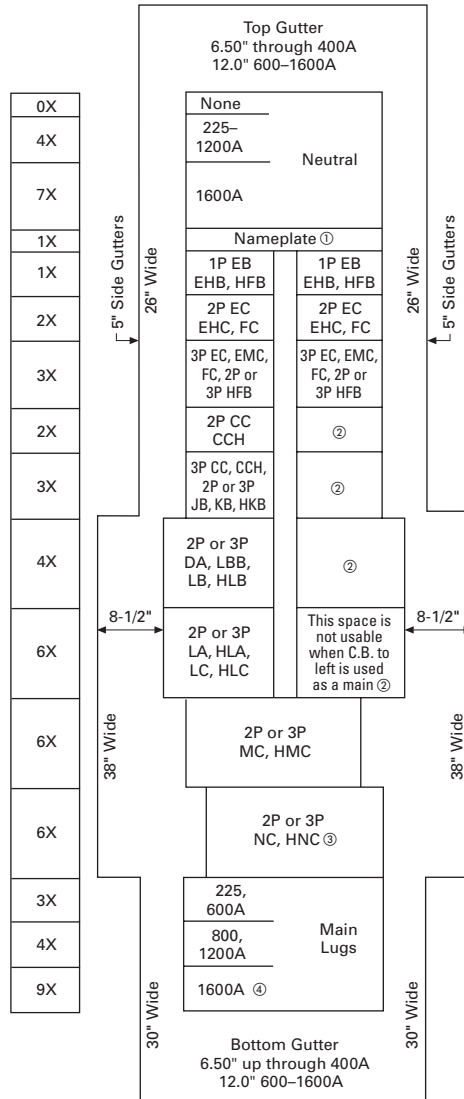

- 1600A maximum

Replacement Capabilities

Breakers

Refer to renewal parts data RP01400003E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Contact the Aftermarket Center in Sumter, SC (see **Page V12-T4-22**).

MP40 Panel Layout

Notes

- ① If the panelboard has a main breaker, no neutral, no split bus, or no sub-feed or feed-through lugs, add 1X to provide space for a nameplate.
- ② Breakers of the same frame size, regardless of poles, may be mounted opposite of each other.
- ③ Only Type NC and HNC breakers require a 11.38-inch (289.1 mm) deep box. Standard box depth is 10.50 inches (266.7 mm).
- ④ When 1600A lug mains are for (4)–600 kcmil maximum copper cables per phase, the X unit space can be reduced to 4X.

EE

Originally a
Cutler-Hammer Product

Cutler-Hammer EE Panelboard

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of molded-case circuit breakers and fusible switches into your existing EE panelboards.

- Determine the amount of space available in the panelboard for adding replacement devices. 1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of replacement device needed for the required ampere rating and number of poles

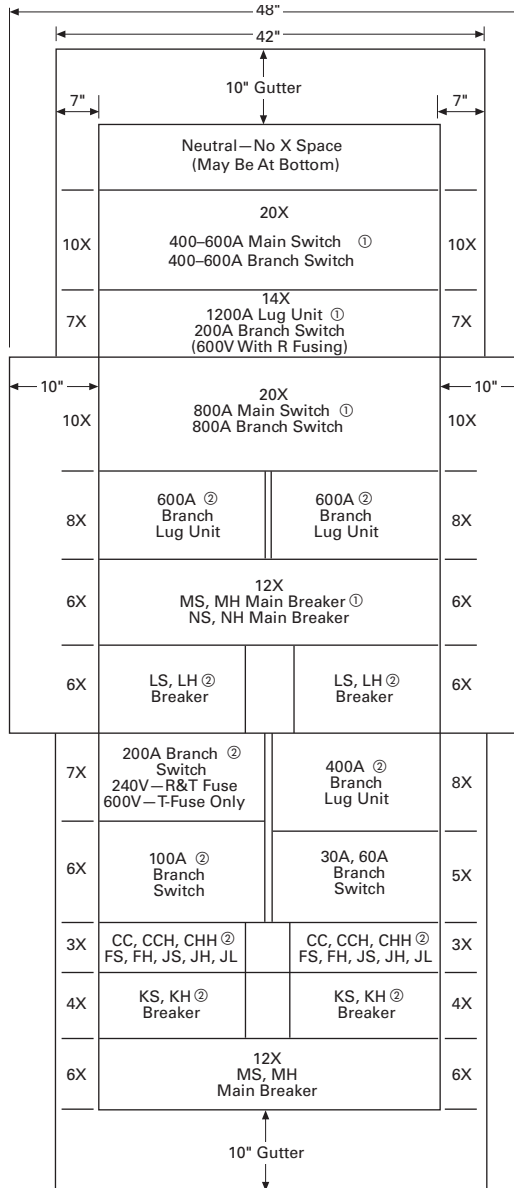

Ratings

- 1200A maximum

**Replacement Capabilities
Breakers and
Fusible Switches**

Refer to renewal parts data RP01400003E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Contact the Aftermarket Center in Sumter, SC (see **Page V12-T4-22**).

EE Panelboard Panel Layout

Notes

- ① Main device must be mounted at neutral end of double-bus panel.
- ② May be used in 30.00-inch (762.0 mm) wide single bus interiors.

EP

Originally a
Cutler-Hammer Product

Cutler-Hammer EP Panelboard

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of molded-case circuit breakers into your existing EP panelboards.

- Determine the amount of space available in the panelboard for adding circuit breakers.
1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of breaker needed for the required ampere rating and number of poles

Ratings

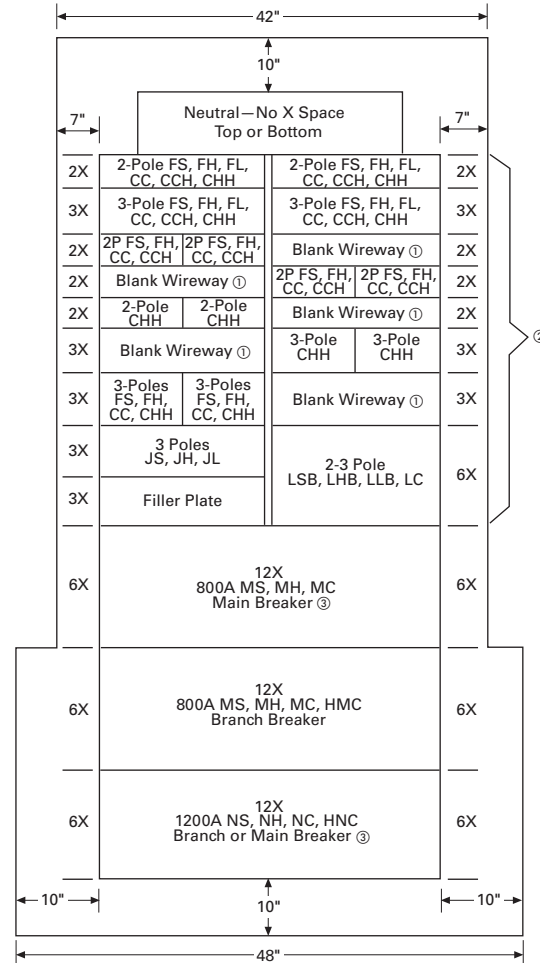

- 1200A maximum

Replacement Capabilities

Breakers

Refer to renewal parts data RP01400003E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Contact the Aftermarket Center in Sumter, SC (see **Page V12-T4-22**).

EP Panelboard Panel Layout

Notes

- ① Blank wireway fillers are required opposite any dual breaker unit or adapter.
- ② May be used in 30.00-inch (762.0 mm) wide single bus interiors.
- ③ Main device must be mounted at neutral end of double-bus panel.

Notes

- ① If panel contains only BAB or QBH branch breakers, use a PRL1 panelboard.
- ② BAB and QBH breakers with shunt trips require one additional pole space, i.e.; one-pole is two-pole size, two-pole is three-pole size, and three-pole is four-pole size.
- ③ GB and GHB breakers cannot be mixed on same subchassis as BAB or QBH.
- ④ If panel contains only GB or GHB branch breakers, use a PRL2 panelboard.
- ⑤ Not recommended for motor loads. Use JD circuit breaker.
- ⑥ Horizontally mounted 15–150A main breakers EHD, FDB, FD, HFD and FDC will be furnished as branch breaker construction. Branch breakers one, two or three poles as required, may be located opposite these main breakers.
- ⑦ FBP and LAP top mounting only.
- ⑧ 100% rated breaker.
- ⑨ LCL main breaker requires 6.50-inch (165.1 mm) deep box.

PRL3a

Current Product

PRL3a

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of molded-case circuit breakers into your existing PRL3a panelboards.

- Determine the amount of space available in the panelboard for adding circuit breakers. 1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of breaker needed for the required ampere rating and number of poles

Ratings

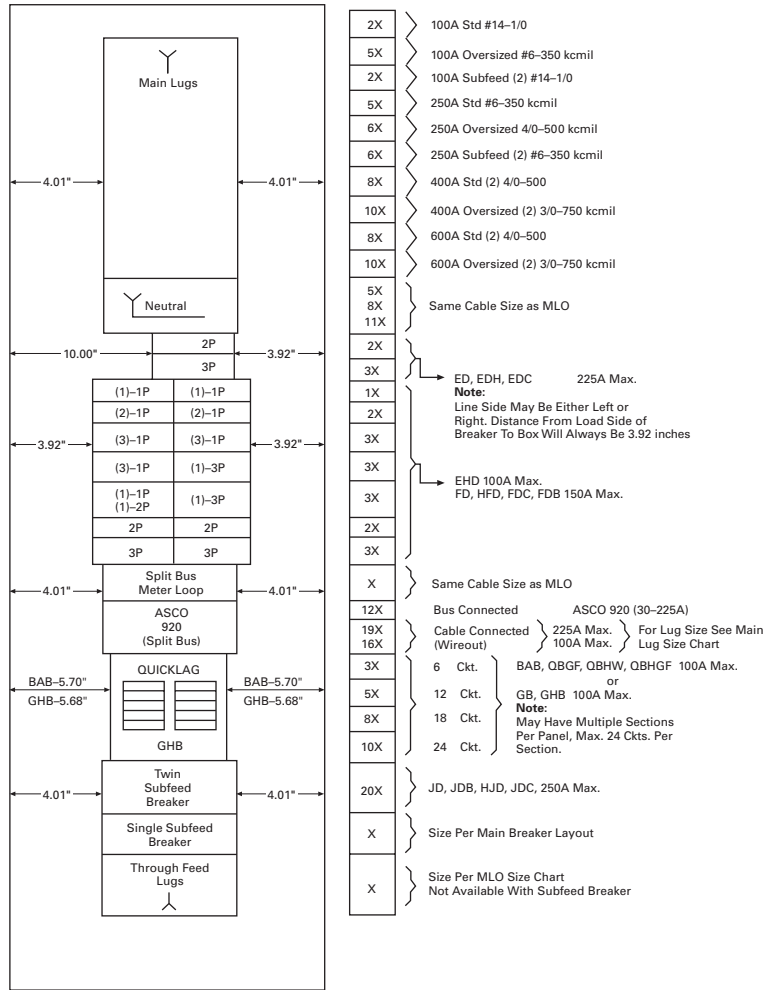

- 600A maximum

Replacement Capabilities

Breakers

Refer to renewal parts data RP01400001E and RP01414001E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Retrofit kits and renewal parts are available from your Eaton Satellite plant. Refer to **Page V12-T4-22**.

PRL3a Panel Layout

PRL4B

Current Product (Originally a Westinghouse Product)

PRL4B

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of molded-case circuit breakers into your existing PRL4B panelboards.

- Determine the amount of space available in the panelboard for adding circuit breakers. 1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of breaker needed for the required ampere rating and number of poles

Ratings

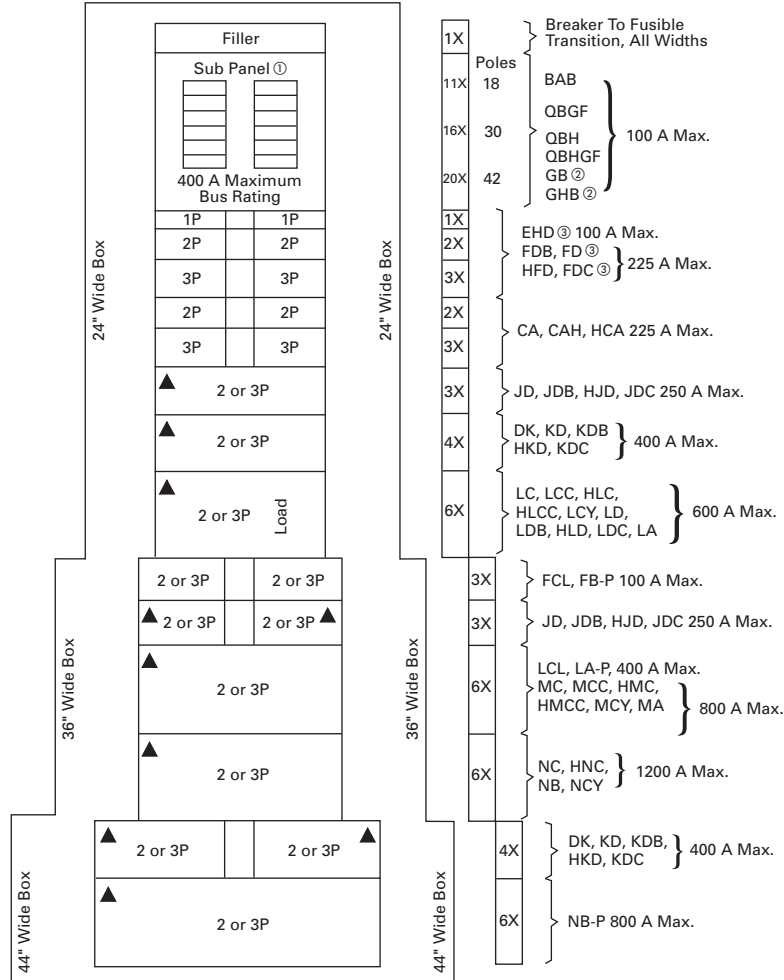

- 1200A maximum

Replacement Capabilities

Breakers

Refer to renewal parts data RP01400001E and RP01414001E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Retrofit kits and renewal parts are available from your Eaton Satellite plant. Refer to **Page V12-T4-22**.

PRL4B Panel Layout

One X space = 1.38 inches (35.1 mm).
Blank fillers are required for unused X space.

Notes

- ① Maximum amperes connected to any one connector cannot exceed 140A.
- ② GB and GHB breakers cannot be mixed on the same subchassis as BAB or QBHW.
- ③ When only one single-pole breaker of the group is required on either side of chassis, the single-pole breaker space required changes from 1X to 2X.

PRL4F

Current Product (Originally a Westinghouse Product)

PRL4F

The panel layouts shown on this and the following pages will aid in determining the space available for the addition of fusible switches into your existing PRL4F panelboards.

- Determine the amount of space available in the panelboard for adding fusible switches.
1.38 inches (35.1 mm) of panel height = one X space
- Determine the type of fusible switch needed for the required ampere rating and number of poles

Ratings

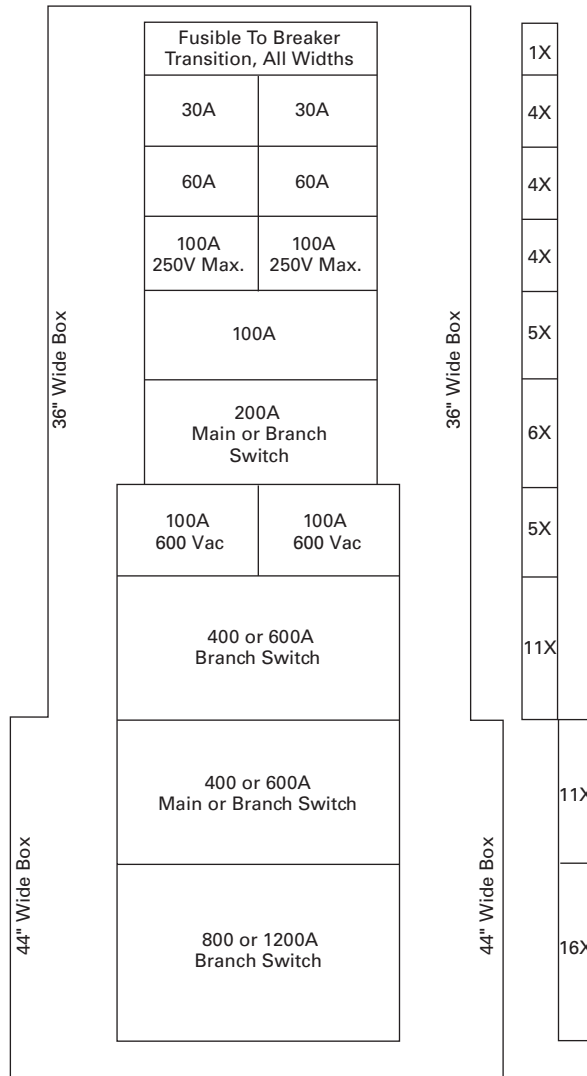

- 1200A maximum

Replacement Capabilities

Fusible Switches

Refer to renewal parts data RP01400001E and RP01414001E for a complete list of available parts including branch device retrofit kits, which include the device, as well as, the bus connectors and the required mounting hardware. Retrofit kits and renewal parts are available from your Eaton Satellite plant. Refer to **Page V12-T4-22**.

PRL4F Panel Layout

Technology Upgrades

Surge Protection Devices— SPD Series

**Eaton SPD Series—
Surge Protective Device**

The Eaton SPD Series of surge protection products ensures that equipment is protected with the safest, most reliable and most advanced UL 1449 3rd Edition certified surge protectors. The array of features, options and configurations ensures that there is a unit for all electrical applications, including service entrances, distribution switchboards, panelboards and point-of-use applications. Field installation is required.

Benefits

- The SPD Series can be externally mounted to existing distribution equipment
- Surge ratings: 50, 80, 100, 120, 160, 200, 250, 300 and 400 kA
- Standard NEMA 1 enclosure, optional NEMA 4 and 4X
- Surface or flush mounting
- Full range of diagnostic and monitoring options
- Remote mountable display panel
- Available with optional internal disconnect

For more information about the SPD Series surge protection, contact your local Eaton Field Sales office.

Pow-R-Command™

Pow-R-Command Lighting Control

Eaton's Pow-R-Command is a family of microprocessor-based lighting control systems designed for today's modern facilities. They may be used as a standalone, or networked for the control of lighting and other branch circuits.

Existing facilities can be retrofitted to include various Pow-R-Command scenarios allowing customers varying degrees of control. For more information on upgrading your building to include the energy savings and control of Pow-R-Command lighting control systems, contact your local Eaton Field Sales office.

System Features

- Day/Date/Time of Day scheduling
- Holiday scheduling—up to 30 days/year
- Astronomical time scheduling
- Real-time clock
- Hardware diagnostics
- Off warning by blinking lights
- Manual load override control
- Brownout and power failure recovery
- Telephone override of schedules
- Switch override of schedules
- Remote access to system
- Dimming systems for fluorescent fixtures
- Priority load management

Panelboard Retrofits

Type PRL1a

Another Custom-Assembled Panelboard Capability from Your Local Eaton Satellite

Save time and money when upgrading and expanding existing electrical services by using existing panelboard enclosures and conduit runs.

Retrofitting existing panelboards can be an effective solution for:

- Providing additional circuits for load growth
- Replacing obsolete equipment
- Upgrading protective device interrupting ratings
- Accommodating system change and additions
- Adding ground fault circuit interrupters
- Adding lighting controls
- Adding surge protection devices

The unique capabilities of the Eaton Satellite plants can provide special configurations to meet the special needs encountered in retrofit applications.

Pow-R-Line 1R and 2R renovation panelboards, or custom-built panelboard interiors and trims can be provided to retrofit most any manufacturer's existing panelboard enclosure.

Armed with the necessary information about the existing installation and the needed upgrade, the professional staff at your local Satellite plant can offer the assistance and application support to ensure an accurate quotation and on-time delivery of a quality retrofit product.

Pow-R-Line 1R and 2R Renovation Panel

Renovation Panel

Product Description

- 240 and 480 Vac
- Single-phase three-wire or single-phase two-wire
- Three-phase three-wire or three-phase four-wire
- 225A maximum
- 100A maximum branch breakers
- Fits existing box depths from 4.50 to 6.00 inches (114.3 to 152.4 mm) deep
- Integrally mounted neutral assembly
- Ground bar and bonding conductor included
- Neutral and ground convertible from left-right
- Bolt-on branch breakers
- Factory assembled—custom and standard trims available

Application Description

- Lighting and appliance branch panelboards
- Fully rated or series rated
- Interrupting capacities to 100 kA symmetrical
- Suitable for use as service entrance equipment where specified on the order

Standards and Certifications

- UL 67
- Federal Specification W-P-115c
- CSA® C22.2 No. 29

The Pow-R-Line 1R and 2R retrofit panelboard is designed specifically for use in the renovation of existing electrical systems. This innovative solution employs a chassis design that enables the use of the existing back box, conduit and cables. An exclusive depth-adjusting mechanism and an integrated trim assembly provides for fast, trouble-free mounting of the new panelboard interior into any existing enclosure.

The panelboard chassis is designed for the use of main lugs or a main breaker and can accommodate 18, 30 or 42 branch circuits.

Pow-R-Line 1R Retrofit Chassis

Chassis Features

Designed to accommodate minimal box widths at 14.00 inches (355.6 mm). Innovative telescoping chassis accommodates depths from 4.50 to 6.00 inches (114.3 to 152.4 mm) without the need for box modifications.

Universal mounting locations allow the neutral and grounds to be relocated from top to bottom or left to right side of back plate.

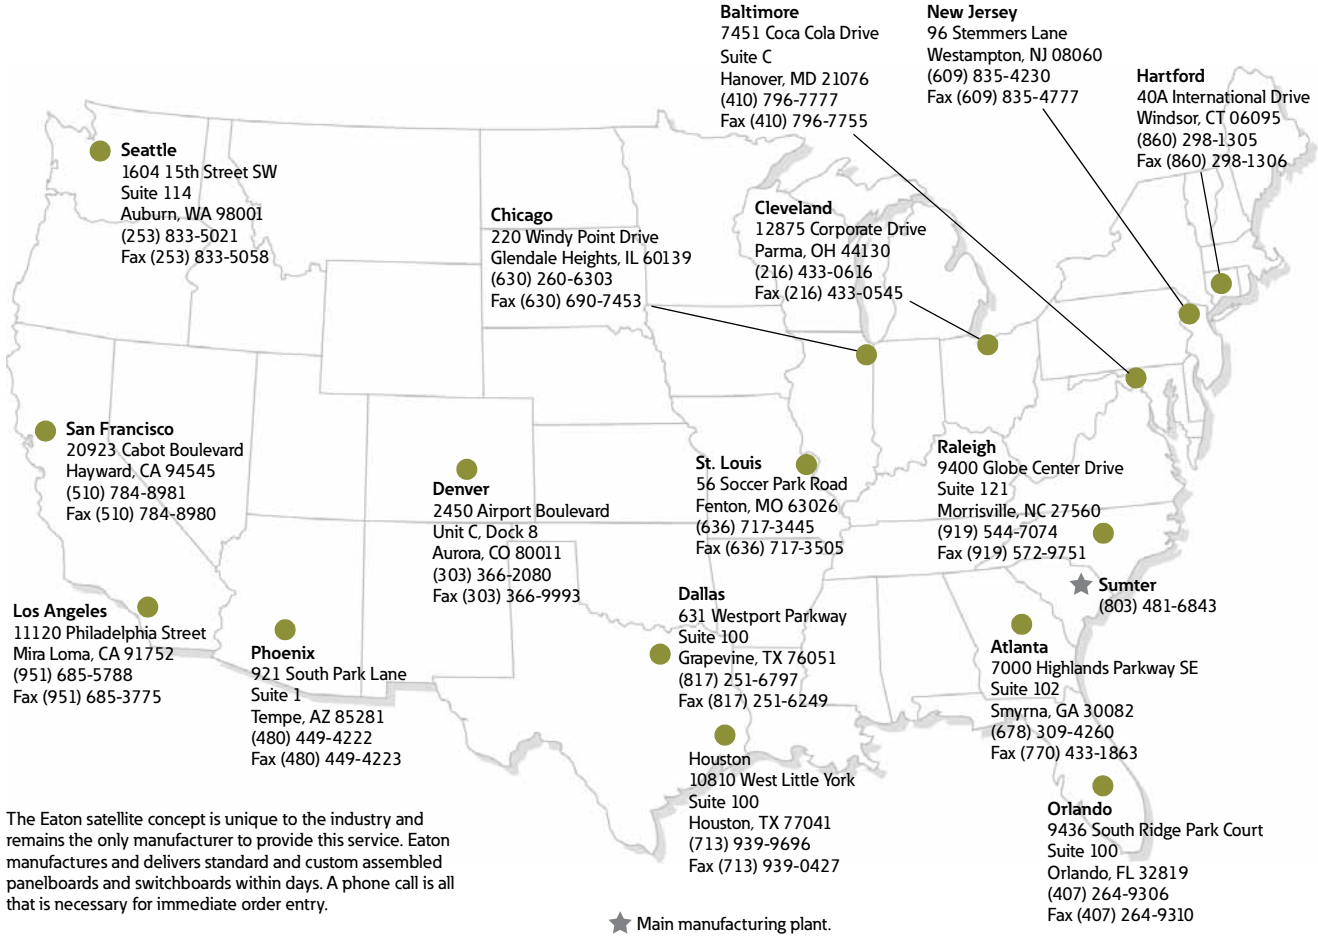

High quality laser cut trim with lock.

Trim and door mount directly to the chassis assembly. Concealed trim hardware is not dependent on back box for mounting.

Refer to publication **CA01417001E** for complete information.

Product Support Services

Satellite Locations

The Eaton satellite concept is unique to the industry and remains the only manufacturer to provide this service. Eaton manufactures and delivers standard and custom assembled panelboards and switchboards within days. A phone call is all that is necessary for immediate order entry.

Product Description

Loadcenters are enclosed assemblies used for power distribution and circuit protection in residential, commercial and light industrial applications. The assembly consists of an enclosure, an interior assembly and a cover. The interior assembly consists of a backpan where the bus assembly is mounted. Incoming power is terminated at main lugs or a main circuit breaker. Load circuit protection is provided by molded-case circuit breakers that plug onto the

bus assembly. Loadcenters are used on services providing no more than 240 Vac, and are available with bus rated from 40 to 600A. Loadcenter covers are available as surface, flush or combination.

Product History

Type CH Family

Eaton's electrical business began manufacturing the CH series of loadcenters and circuit breakers in 1962. Changes have occurred over the years due to code changes, UL® listed

requirements and product enhancements. Three major design changes occurred in 1969, 1982 and 1995. The 3/4-inch wide feeder circuit breakers, silver flash plated copper bus, sandalwood (tan) painted box and industry-leading warranties have been the trademarks of this premium product through the years.

Type BR Family

With the acquisition of Westinghouse's Distribution and Control Business Unit (DCBU) in 1994, Eaton gained the circuit breaker and loadcenter manufacturing

and marketing operations of Westinghouse. Prior to 1989, these products were manufactured by Westinghouse's Bryant subsidiary in Bridgeport, CT. The products from this facility bore the Westinghouse and Bryant nameplates. In 1988, Westinghouse purchased Challenger Electric, redesigned the product, and moved all production from Bridgeport to Jackson, MS. As Eaton integrated the product lines in 1995, all loadcenter production shifted to the Lincoln, IL, facility.

Type CH Loadcenter

Extra 1.50-Inch (38.1 mm) Knockout for Bundling Provides for easier installation, less installation time.

Top or Bottom Feed
 ■ Straight-in wiring saves labor and material
 ■ Only one panel for either application—no modifications necessary

Commercial Grade Main Breaker
 ■ 35 kAIC series rated main breaker in 150 and 200A loadcenters
 ■ 42 and 100 kAIC series ratings available

Drywall Marking on Enclosure Indicates proper mounting depth for flush applications.

One-Piece Silver Flash Plated Copper Bus Provides superior conductivity throughout the entire product line.

Steel Backpan
 ■ Provides positive, reliable breaker mounting
 ■ One-piece designed for stability

Convertible Styles Available
 ■ Uses field-installable main breaker or main lug kits
 ■ Flexible inventory—same breaker is used in loadcenter and circuit breaker enclosures

"Tangential" Center Knockout for easier installation

Single Keyhole Mounting Just one keyhole at top and bottom for easier mounting and leveling.

Unique Sandalwood Finish Immediately recognizable, aesthetically appealing, scratch-resistant powder coating.

Separately Packaged Covers
 ■ Full line of "true" surface and combination covers
 ■ Built-in flush leveling feature
 ■ Choice of circuit identification by breaker labels or circuit directory

Neutral Design (for styles as indicated)
 ■ Bonding strap is easily removable for sub-panel applications providing a ground and neutral
 ■ Factory-bonded for service entrance applications providing a split neutral
 ■ Ample additional 2/0 lugs provided; no kits necessary
 ■ 200% size neutral

Improved Endwall Knockouts Larger KOs are balanced to enhance installed appearance and to ease use of existing wiring.

CH125RB24	Hold-down retainer kit for single-, two-, three-pole Type CH circuit breakers for 2–4 circuit MLO CH loadcenters.	1	CH125RB24
			

Notes

- ① Must be purchased in multiples of ordering quantities indicated.
- ② Handle ties: typically used to join two similar independent single-pole breakers to form a two-pole noncommon trip breaker.
- ③ Handle lockoffs: devices that use a padlock to lock the circuit breaker's handle in the ON or OFF position.
- ④ Requires one additional pole space.
- ⑤ Escutcheon mounted: device mounted semipermanently to the face of the circuit breaker and secured by the loadcenter deadfront.
- ⑥ Screw mounted: device permanently mounted to the face of the circuit breaker by the use of a non-removable screw.
- ⑦ Handle lockdogs: devices that are used to secure a circuit breaker's handle in the ON or OFF position. Handle lockdogs are not padlockable devices.
- ⑧ Handle mounted: device mounted above or below handle using spring pressure.
- ⑨ Hold-down kits: devices used to secure the circuit breaker to the loadcenter for back-feed main application. See NEC Article 384.16(g).

Replacement Breaker Accessories

Description	Ordering Quantity ^①	Catalog Number
BHT		
Handle Ties ^②		
 Handle tie bar for physically joining the handles of two adjacent single-pole Type BR circuit breakers (metal cylinder pin type)	10	BHT
THOW		
 Handle tie bar for joining two independent outside poles of Types BQ and BQC Quadplex and outside poles of two Type BD duplex circuit breakers	10	THOW
THS1		
 Handle tie bar for joining two adjacent outside poles of Types BQ and BQC Quadplex and outside poles of two Type BD duplex circuit breakers	10	THS1
BRLW		
Handle Lockoffs ^③		
 Padlockable device for locking the handle of single-, two- or three-pole Type BR Circuit Breakers and single-pole of a Type BD Duplex or one independent outside pole of a Type BQ or BQC Quadplex circuit breakers (escutcheon mounted) ^④	10	BRLW
BRLW1		
 Padlockable device for locking the handle of a single-pole Type BR circuit breaker.(handle mounted) ^④	10	BRLW1

Notes

- ① Must be purchased in multiples of ordering quantities indicated.
- ② Handle ties: typically used to join two similar independent single-pole breakers to form a two-pole noncommon trip breaker.
- ③ Handle lockoffs: devices that use a padlock to lock the circuit breaker's handle in the ON or OFF position.
- ④ Handle mounted: device mounted directly to the handle by the use of a set screw.

Replacement Breaker Accessories, continued

Notes

- ① Must be purchased in multiples of ordering quantities indicated.
- ② Handle lockoffs: devices that use a padlock to lock the circuit breaker's handle in the ON or OFF position.
- ③ Handle mounted: device mounted directly to the handle by the use of a set screw.
- ④ Escutcheon mounted: device mounted semipermanently to the face of the circuit breaker and secured by the loadcenter deadfront.
- ⑤ Screw mounted: device permanently mounted to the face of the circuit breaker by the use of a non-removable screw.
- ⑥ Handle lockdogs: devices that are used to secure a circuit breaker's handle in the ON or OFF position. Handle Lockdogs are not padlockable devices.

Product Description

Eaton UL classified replacement circuit breakers are available in both 3/4-inch Type CHQ and 1.00-inch Type CL, single- and two-pole configurations. These breakers are classified as direct replacements by Underwriters Laboratories. In addition to a UL listing, they also come with a 15-year warranty.

Specified vs. UL Classified

Specified breakers are listed by the manufacturer of the panelboard for use in a particular panel. This doesn't mean that the panelboard manufacturer produced the specified breaker; it merely means that the panelboard manufacturer has tested the breaker in the panel. In fact, through the years, Eaton has manufactured thousands of breakers for other panelboard manufacturers.

UL classified breakers are produced by one manufacturer for use in place of the breakers specified on the panelboard. Like specified breakers, UL classified breakers have been tested in the panels for which they are approved.

Testing

Classified breakers are tested extensively in numerous General Electric®, Siemens®, Murray®, Thomas & Betts®, Square D® and Crouse-Hinds® panels. The tests are conducted with witnesses from Underwriters Laboratories and involve short circuit, temperature and insertion/withdrawal applications. This level of testing ensures that the breakers meet identified standards and have been found suitable by UL for the specified purpose.

Understanding Classified Breaker Terminology

Definitions

Specified Circuit Breaker—

Each manufacturer lists the brands of circuit breakers that can be used in their panelboards. Often, manufacturers will not list competitors as specified, even though they are suitable replacements.

Classified Circuit Breaker—

A breaker that is considered suitable, by a qualified third-party organization, for use in another manufacturer's panelboard.

Listed Breaker—The listing of a circuit breaker is by an independent third party. Eaton classified breakers are listed by UL.

Labeled Breaker—A breaker with a label affixed by an independent third party.

Non-CTL Plug-On Replacement Circuit Breakers, Type CHNT 10 kAIC, 120/240 Vac

For use as replacement in loadcenters built prior to 1968 and within the current style loadcenters as indicated in the loadcenter section.

3/4-Inch (19.1 mm) per Pole 120 Vac, Non-CTL 10 kAIC

Ampere Rating	Wire Size Range Cu/Al 60°C or 75°C	Single-Pole Requires One 3/4-Inch (19.1 mm) Space 10 per Shelf Carton Catalog Number

Notes

- ① Switching duty rated.
- ② HACR rated.

Type CH Renovation Loadcenter

Product Description

Eaton's Renovation Loadcenter is designed for the service contractor. With the addition of a five-circuit terminal block factory mounted in the top left corner of the loadcenter, the service contractor can terminate short-circuit wires instead of having to use expensive wire nuts. Also, the Renovation Loadcenter incorporates a twin-stacked neutral design that places the neutral and ground terminations higher in the loadcenter.

Both of these features were added without increasing any size from a standard loadcenter. These features will eliminate the need for wire nuts and make for a much neater installation. There is a provision to field mount a second five-circuit terminal block (RN5TB) in the top right corner of the loadcenter. Choose amongst Eaton's Type CH breaker family for use in the Renovation Panel.

Renovation Loadcenter

Description	Catalog Number
Five-circuit terminal block kit	RN5TB
Ground bar kits (two maximum per panel)	(See Page V12-T5-4)

Notes

① 100A main breaker is rated 10 kAIC.

② Combination style covers may be used in surface or flush applications.

All main circuit breaker loadcenters are listed for use as service entrance equipment. Loadcenters are factory-bonded for service entrance applications. Remove bonding strap for separate neutral and ground bars for sub-feed applications.

Plug-On Neutral Loadcenter

Product Description

Code changes and higher safety standards are leading to more arc fault and ground fault circuit interrupter installations. Eaton offers a unique product solution that enables a direct connection of the breaker to the neutral bar, eliminating the need for wiring a pigtail.

Features and Benefits

- Time savings up to 25% per AFCI/GFCI installation
- Eliminates nuisance tripping due to loose pigtail connections
- Clean gutter space
- Easier troubleshooting due to less wiring
- Backed by a limited lifetime warranty

Type CH Retrofit Interior Kits

Type CH Retrofit Adjustable Interior

Type CH Retrofit Interior Collar and Assembly with Trim

Product Description

Replacing existing loadcenters and panelboards can be a time consuming and expensive job. CH retrofit kits can be the solution to save time and money. The kit consists of a standard trim to fit the interior, a picture frame trim to fit the existing box, and a field-adjustable interior assembly that includes neutral and ground bars. These are especially applicable when the existing box is flush mounted in drywall, plaster or block wall. The existing box, and many times existing wiring, can remain.

Features and Benefits

Upgrading Existing Electrical Infrastructure is Simple

- Replaces vintage brands that have hard to find, expensive replacement breakers
- Allows safety upgrade to arc fault and ground fault breakers
- Maximizes number of circuits available with compact design
- Meets 2008 NEC wire bending requirements
- Eco-friendly in asbestos-filled environments
- Exclusive design

Save Time and Money Throughout the Installation

- Uses existing panel box and wires
- Eliminates expensive drywall/paint repair
- Saves 2–3 hours compared to a complete panel changeout—get off the job faster
- Eliminates precise measurements with field-adjustable kit

Detailed Product Guide

All standard retrofit kits are suitable for a range of existing box sizes:

- Box width ranging from 14.50 to 22.00 inches (368.3 to 558.8 mm)
- Box depth ranging from 4.25 inches (108.0 mm) for CH to 6.00 inches (152.4 mm)
- Box height ranging from 21.00 to 45.00 inches (533.4 to 1143.0 mm)

For box dimensions outside of these ranges, contact the Lincoln Flex Center at 800-330-6479. Be sure to provide the existing incoming line wire size.

Standards and Certifications

Interiors are UL Recognized under UL 67, Panelboard standard.

Product Selection

To select the retrofit kit:

1. From the existing box size determine which retrofit groups are suitable (may be more than one).
2. Use type of interior, number of phases, and type of main to find the selection chart.

3. Select part number from chart (if main breaker, replace XXX with specific amp rating).
4. Note that the overlap of the existing wall is the retro cover size minus the existing box size. If specific measurements are needed, communicate that you need a custom trim size.
5. Contact the Lincoln Flex Center at 800-330-6479 for pricing, lead-times and order entry instructions.

Retro Size Groups

Retrofit Stocking Kits (BR and CH Kits Available) ①②

Five recommended groups: existing box height determines retro group size.

Notes

- ① Other options are available.
 ② CH retrofit interiors and collar cartons are color coded to ensure accuracy of kit.

Surge Panel

Product Description

Eaton's Type CH Surge Loadcenter includes a factory-mounted and wired surge suppressor device. There is a knockout in the cover that allows the user to view the status indication lights on the surge suppressor. The CH Surge Loadcenter reduces the surge current, helping to protect sensitive home electronic equipment.

Save labor by installing a factory-mounted surge protective device.

Factory-Installed Surge Protection

- Includes a CHSPULTRA and a two-pole 15A circuit breaker
- Increases the effectiveness of surge protection due to reduced lead length
- A modified deadfront allows for easy viewing of indicating lights

Surge Ready

- Provides a mounting provision for CHSPULTRA
- A modified deadfront allows for easy viewing of indicating lights

Meter Centers

Product Description

WCG3 Meter Center

Cutler-Hammer® Meter Centers from Eaton's electrical business are designed for use where an individually metered distribution center is required. Meter centers house meter sockets that measure power consumption at service entrances. Metering is designed for use with multi-family dwelling units, commercial units and light industrial applications.

Product History

In the beginning, all multiple metering applications were assembled at the job site using wire troughs, individual meter sockets and enclosed circuit breakers.

In the early 1960s, factory-assembled meter packs began to be made on a job-by-job basis. Soon after, modular metering was introduced for single-phase 200A maximum ring-style applications.

In 1981, a few utilities began to require ringless meter covers and, in 1983, the first three-phase commercial meter modules with lever type bypass were introduced.

The Westinghouse Meter Center designs, Type WM and/or WP, and facilities were sold to Thomas & Betts in 1994. Today, wall-hung multiple metering is used in virtually all areas of the country for both residential and commercial applications.

Main ratings range from 250 to 2000A, and 125, 200 and 320A sockets are available in both single-phase and three-phase versions.

Notes

- ① For catalog numbers with a “B” suffix (ringless with horn bypass), all replacement parts are the same with the exception of the meter socket assembly. Refer to Footnote ② for correct catalog number.
- ② For ringless style meter stacks with horn bypass, order **1MMMSB** meter socket assembly.
- ③ For top position, use meter socket cover **1MMRC125T**.
- ④ Used for product built October 2002 and prior.
- ⑤ Used for product built after October 2002.

Safety Switches

Safety Switch Product Family

Product Description

Eaton’s Cutler-Hammer® series of safety switches have a number of applications from service entrance to branch circuit protection. They are also horsepower rated for use as motor circuit switches. Non-fusible safety switches provide a means to manually connect or disconnect the load from the source. Fusible safety switches provide a means to manually open and close a circuit and overcurrent protection by means of installed fuses. Safety switches offer a wide variety of switching capabilities with general-duty, heavy-duty and double-throw switches.

Product History

Eaton began manufacturing safety switches with the 4103 line in 1957. In 1977, the new 4105 line was moved from the New York plant to the manufacturing facility in Lincoln, IL. The last design change came in 1983, where the manufacture of the new K-Series switch was moved to Eaton’s Cleveland, TN, facility. The K-Series design represents our current product offering and is still manufactured at the Cleveland plant.

The Westinghouse safety switch design and facilities were sold to Thomas & Betts in 1994. Prior to this, there were various design and code changes that caused changes in catalog numbering and utilization of the switches. In 1984, an “N” was added to

the middle of the catalog numbers to signify the new National Electrical Code® (NEC®) regulations. During this time period, Westinghouse’s safety switches were manufactured in Beaver, PA. In 1989, the manufacture of the switches

was moved to Vidalia, GA. There was then another code change in 1992 that necessitated another change in catalog numbering. The previous “N” in the middle of the catalog number was deleted for the 400 to 1200A units.

Dry-Type Distribution Transformers

Family of Dry-Type Distribution Transformers

Product Description

Eaton's Cutler-Hammer® series of dry-type distribution transformers are electrical devices that transfer energy by magnetic induction from one circuit to another. They are typically used to change the voltage in an electric power system from its distribution level to the proper level for practical and safe use.

Typical loads for dry-type distribution transformers include lighting, heating, air conditioning, fans and machine tools. Such loads are found in commercial, institutional, industrial and residential structures.

Different types of dry-type distribution transformers are used for various applications throughout facilities. Therefore, dry-type distribution transformers are classified in distinct product groups as follows: general purpose—sand and resin encapsulated (EP and EPT); general purpose—ventilated (DS-3, DT-3, CSL3-2007, NEMA® Premium®); energy efficient (NEMA TP-1); shielded isolation; motor drive isolation (MD); nonlinear (KT); mini-power center (MPC); hazardous location, Buck-Boost and industrial control (MTA and MTC).

Product History

Originally a Westinghouse Product

The first transformer built in the United States was manufactured by Westinghouse Electric in 1892. It was a 2 kVA dry-type transformer. For over a century, Westinghouse

manufactured numerous varieties of transformers for countless applications worldwide.

The Westinghouse design transformer is now available through Eaton. Dry-type transformers, the workhorse of modern industry, are the foundation of modern AC power distribution. It is a

transformer that solves the problems of maintenance, installation, safety and efficiency by using air to cool the coils instead of liquids. Many older transformers, which in some cases pre-date the product families listed above, can be updated to the modern designs currently manufactured by Eaton.

Busway (Low Voltage)

Standard Plug-In

Product Description

Eaton's Cutler-Hammer® low voltage busway consists of aluminum or copper bars inside a metal housing used for power distribution. Busway is available in ampere ratings of 100–5000A. Busway is available as feeder (indoor or outdoor) and plug-in. Feeder busway routes power from point-to-point, whereas plug-in busway allows for power to be tapped off along a run as needed. Busway is typically used in manufacturing buildings and high-rise office buildings.

Product History

Westinghouse began marketing low voltage busway in 1938. The first product offering was power distribution busway, using a multiple bolt joint that later evolved into standard plug-in busway. Victory bus duct was developed during the Second World War to comply with federal limitations placed on usage of materials such as steel and copper, which were critical to the war effort. In 1947, Westinghouse began manufacturing busway at the newly acquired facility in Beaver, PA, with standard

plug-in and feeder bus in ratings up to 1500A. All of these early designs used separated, uninsulated busbars inside a totally enclosed or perforated steel housing.

In 1951, low impedance feeder busway was introduced as the first design to use heat-shrinkable tubing for insulation on the busbars and a ventilated steel housing. An internal ground bus was not available with this product line, but provisions were made for mounting an external ground bus directly to the busway housing. Low impedance feeder and standard plug-in busway accounted for the majority of busway business written by Westinghouse through the 1950s and into the 1960s. Low impedance plug-in busway was introduced in 1961. With this design, the product offering was expanded to a maximum of 5000A for feeder and 4000A for plug-in.

During the 1950s, various other designs were introduced to meet specific customer needs. Westinghouse Lifeline Unibus, rolled out in 1955, provided low impedance characteristics with plug-in openings and incorporated flexible armored cable into the design for use as elbows, offsets and flat to edgewise adapters.

Westinghouse high frequency busway was introduced in 1958 to address the inherent problems of transmitting power at frequencies from 180 to 20,000 Hz. Cutler-Hammer high frequency BV (balanced voltage) busway was also marketed during the late 1950s and early 1960s. Westinghouse high frequency busway and Cutler-Hammer BV busway both found success in aircraft manufacturing plants, industrial induction heating systems, military missiles and radar bases.

Electric utility busway was also introduced by Westinghouse in 1958 and was designed to conduct direct current with low voltage drop. By 1963, electric utility busway had been expanded to meet the growing industrial market for direct current power and was marketed simply as DC busway. This product line was applied to feeding plating processes, welding installations, mill drives and motors.

In 1958, Westinghouse sold the rights to the Life Line Unibus product line to EDP of Allentown, PA, which marketed EDP Unibus until 1962 when EDP became a wholly owned subsidiary of Eaton. Eaton successfully marketed Unibus until the product line was discontinued in 1974.

In 1966, Westinghouse introduced its first true sandwich bus design with H5000 feeder busway. H5000 was also the first single bolt joint design offered by Westinghouse and it initially used a PVC shrink tubing and later a Mylar® wrap for busbar insulation. A combination of steel and aluminum channels were used to form a lightweight non-magnetic housing. The grounding method for H5000 was similar to low impedance busway and an external ground bus mounted onto the housing was the only offering. H5000 plug-in busway rolled out in 1968 as a non-sandwich design with separated and uninsulated busbars.

In 1970, the Eaton's Cutler-Hammer Bethlehem, PA, plant introduced CP2 SAFETYBUS that used an innovative single bolt, bridge joint design with a steel housing for plug-in, and a combination of steel and aluminum channels for the feeder housing. CP2 used a Mylar wrap for busbar insulation and an Alstan® process for plating. The feeder busway was a sandwich design while the plug-in design used separated busbars that were braced and supported by corrugations formed in the housing sides.

Typical Pow-R-Way Plug-In Straight Length

Typical Pow-R-Way II Plug-In Straight Length

Westinghouse introduced the Pow-R-Way product line in 1971. Pow-R-Way employed the sandwich design in both feeder and plug-in. At that time, Pow-R-Way used a combination of PVC, applied by the fluidized bed process, and Mylar sheeting for busbar insulation that achieved a Class A, 105°C rating. Silver-plating of all joint and contact surfaces was applied by a Zincate process. Pow-R-Way is a bolt-end/slot-end design with a single bolt connection at the joint and is rated from 600 to 5000A. Pow-R-Way II was rolled out in 1975 with ratings of 225A and 400A in feeder and plug-in. Pow-R-Way II is a single, captive bolt per bar design for indoor, horizontal applications only.

During 1980, the Cutler-Hammer busway design was upgraded and they began marketing CP3 SAFETYBUS. CP3 featured an improved bridge joint package and a polyethylene terephthalate wrap for busbar insulation. CP3 maintained the CP2 housing design with busbar separation in the plug-in product configuration.

Cutler-Hammer CP4 SAFETYBUS was introduced in 1985 and incorporated the sandwich design into the plug-in busway. CP4 featured a UL® recognized case ground path rating and 130°C Mylar busbar insulation. CP4 used the CP3 bridge joint package and accepted CP2 and CP3 bus plugs. The CP4 product line was successful in both the commercial and industrial markets until it was discontinued in 1994.

In 1988, Westinghouse moved the busway product line to the Greenwood, SC, manufacturing facility. At that time, an improved Alstan plating process was implemented for silver-plating the joint and contact surfaces. In 1993, the automated fluidized bed process was changed to Class B, 130°C, epoxy insulation.

Cutler-Hammer Pow-R-Way III® was introduced in 1997. As in the past, specific customer needs have driven the design of this product line. High short-circuit ratings, finger-safe protection at the plug-in openings, integral housing ground path, two-piece extruded aluminum housing and an optional 200% neutral are just some of the features with this product line.

Miscellaneous Accessories

Description
Wall/floor flange
Extra cantilever hangers
Hookstick kit (8–14 feet) HS8-14 ^④
Renewal Parts
Joint hardware—EXWK10
Access covers (two)
Splice plates (two)

Notes

- ① When ordering from stock, all hangers must be shown as a separate item marked included in price.
- ② Suitable for horizontal mounting only. Contact your local Eaton Field Sales office for pricing and lead times.
- ③ If UCTB is used on end of run, an end closer must also be used for that end.
- ④ Normally available from stock.

Standard and Low Impedance

Originally a Westinghouse Product

Circuit Breaker Plug-In Units

Circuit Breaker Plug-In Unit (Closed)

Circuit Breaker Plug-In Unit (Open)

The enclosure, circuit breaker, neutral and ground are ordered and shipped assembled.

Note: Breaker and fusible plugs must be ordered as assembled units. See **V12-T9-10** for instructions on how to build the assembled catalog numbers.

Note: For units mounting at the joint and feeder type ducts, see bolt-on units—standard plug-in, low impedance and H5000.

Replacement Capabilities—Standard and Low Impedance

Originally a Westinghouse Product

Fusible Plug-In Units

- For standard plug-in and low impedance plug-in busway (not for use on Pow-R-Way busway. Not available for low impedance bus duct)
- Fuses not included
- Mechanical lugs only
- Plug-in unit, neutral and ground can be ordered separately and shipped unassembled

Fusible TAP

Special Industry Fusible Plug-In Units

- Special industry plugs are I²t rated
- Knockouts are not provided
- Grounding lug included on 200A and above
- Lugs ordered and shipped separately
- Fuses are not included
- If neutral or ground assembly is required, contact your local Eaton Field Sales office

Three-Wire—Ground Detector and Neutralizer Plug

Maximum Volts	Catalog Number
600	GND36

Notes

- ① Not available for low impedance bus duct.
- ② Normally available from stock.
- ③ Only half neutral available. For full neutral, use a TAP366BO or TAP326BO unit.
- ④ Must be factory assembled. Order by description on suffix BUS.
- ⑤ Plug-in unit not available. Contact your local Eaton Field Sales office for bolt-on type.
- ⑥ Must be factory assembled. Order by description.

Quick-Assembled Plugs

The Mod Center in Spartanburg, SC, will perform the assembly of the bus plugs in 3 days or less for most orders. Bid Manager™ enables you to “build” the appropriate catalog number. When the order is entered in Bid Manager, it will automatically transfer the order to suffix “QAP.” Please see the following rules for building the assembled catalog number.

Catalog Numbering Selection

Quick-Assembled Plugs—Breaker Unit ^{①②}

Quick-Assembled Plugs—Fusible Unit ^{②③④}

Notes

- ① Do not leave space between characters. Example: **P3BHFD3015GN**.
- ② Contact your local Eaton Field Sales office for help in assigning a catalog number for a specific application.
- ③ Do not leave space between characters. Example: **P3F264RGN**.
- ④ “H” clips are standard for Pow-R-Way and vintage busway products unless specified by adding “R” or “J” in the catalog number. Example: **P3F264RGN**, **ITAP361JGN**.

Notes

- ① Factory assembled. Contact your local Eaton Field Sales office for delivery and order entry information. When ordering, you must specify:
 1. Load left or load right.
 2. Front or rear mounting.
 3. Type of busway to which unit is to be mounted.
- ② Full neutral. For half neutral, contact your local Eaton Field Sales office.
- ③ Not available for low impedance bus duct.
- ④ Order by description with bolt-on unit.
- ⑤ These bolt-on units include an adapter for mounting at the joint. They do not require a power take-off unit.
- ⑥ Refer to the current *Price and Availability Digest (PAD)* for breaker list prices.

Notes

- ① Maximum hp ratings apply when time delay fuses are used.
- ② 120–208V hp ratings are based on 200V motor usage.
- ③ All units ship as three-phase, four-wire plugs.
- ④ Requires two adjacent plug-in outlets that do not span a busway joint.
- ⑤ For ground stab to engage internal ground bus, add suffix “G” to catalog number.
- ⑥ Also accepts (2) #1–300 kcmil Al/Cu.

Notes

- ① Provided with busway bolt-on clip and straps for 0.50-inch hanger rods.
- ② Unit extends 10.50 inches below busway.

Technology Upgrades

Clipper Power Systems, Busway TVSS Protection

The low voltage busway aftermarket product offering includes transient voltage surge suppression (TVSS), which is ideal for busway fed distribution systems. Eaton has developed the Clipper Power System (CPS) family of products to ensure that the quality power required to maximize productivity in today's competitive environment is supplied to commercial, industrial, medical and institutional facilities. Without power

protection devices, microprocessors and electronic-based loads are not provided with the noise and disturbance-free power that they require. Because microprocessor-based loads are now common in every facility, engineers must ensure the AC power supply is properly filtered. The CPS busway family of products consists of TVSS and filter components (TVSS filter) integrated into a bus plug with a fusible disconnect. TVSS bus plugs are available for the following types of plug-in busway:

- Westinghouse standard plug-in
- Westinghouse low impedance plug-in
- Westinghouse H5000 plug-in
- Cutler-Hammer CP2 plug-in
- Cutler-Hammer CP3 plug-in
- Cutler-Hammer CP4 plug-in
- Westinghouse Pow-R-Way
- Westinghouse Pow-R-Way II
- Cutler-Hammer Pow-R-Way III

Significant performance advantages are achieved by integrating TVSS filters into busway systems. Because the TVSS unit is directly connected to the busway, the CPS minimizes let-through voltage. This is a significant performance advantage compared to cable-connected TVSS solutions. Due to the integrated design, the CPS bus plug also saves the user wall space and greatly reduces the installed project cost.

Catalog Numbering Selection

IQ Energy Sentinel for Bus Plugs

Bus Plug with Energy Sentinel

Customer Required Information

If Originally a Westinghouse Product

1. Style number or shop order number from existing busway nameplate and complete nameplate information.
2. Height and width dimensions of housing from existing busway.
3. Order by style number on suffix Q77.

If Originally a Cutler-Hammer Product

1. Check Vista for pricing.
2. Order by catalog number on suffix Q73.

The Cutler-Hammer IQ Energy Sentinel™ was designed as part of the PowerNet™ system and is a highly accurate, microprocessor-based submeter that monitors power and energy. It offers a centralized alternative to individually mounted wattmeters, watthour meters and watt demand meters.

Key advantages include unmatched savings in space, lower installation costs, and the capability to communicate data readings in a variety of ways. IQ Energy Sentinels with built-in current transformers (CTs) and communications have the added benefit of overall system accuracy. The IQ Energy Sentinel mounts on the load side of Cutler-Hammer F, J and K breakers within the bus-plug enclosure.

The IQ Energy Sentinel is also available with a universal mounting that uses external CTs and is offered for fusible bus plug applications. Sub-metering application examples for the IQ Energy Sentinel include energy monitoring and demand management, energy cost analysis/allocation, and tenant or interdepartmental billing. To accomplish the communications system, the customer must provide a twisted pair communication cable in 1/2-inch conduit between the IQ Energy Sentinel bus plug and a Cutler-Hammer Central Energy Display, or customer computer to display the information. IQ Energy Sentinel bus plugs are available for Pow-R-Way, Pow-R-Way II and Pow-R-Way III busway.

Electronic Metering and Protection

Power Management Products

Product Description

Eaton's electrical business IQ Metering and Protection group of Cutler-Hammer® series products are multifunctional communicating products based on microprocessor technology. They are designed to replace existing electromechanical devices and can be applied at low, medium and high voltage points in the electrical distribution system. These devices offer communications capabilities to link electrical distribution equipment to Eaton's PowerNet™ Power Management Software.

These products generally surpass capabilities available with older analog/electromechanical technologies. Depending on the features available from each device, information from these devices may be used to record and analyze power system and power quality events or problems and may improve power systems protection and coordination. With communications, these devices may be used for energy monitoring and management with trended data for use in future power system planning.

Product History

Originally a Westinghouse Product

In the early 1980s, power metering and protective relaying functions were performed by electro-mechanical devices. Analog meters and induction disk protective relays were found on virtually every switchgear lineup manufactured up to that time. With the maturing of solid-state electronics, microprocessor-based replacements for the electro-mechanical devices became available. These new devices provided increased functionality and flexibility, in a smaller space, for less cost. Westinghouse led the movement toward electronic metering and protection devices with the introduction of the IQ 2000 motor protection and control relay. In 1987, the IQ 2000 functions were split and two new products were introduced—the IQ 1000 and the IQ Data Plus. The IQ 1000 provided all current monitoring and motor protection functions and was developed for use on AMPGARD® medium voltage starters and low voltage motor control assemblies. The IQ Data Plus provided complete electrical metering and system voltage protection, and was developed for use on low and medium voltage switchgear, as well as AMPGARD and low voltage motor control assemblies.

The latest next generation addition to metering is the Power Xpert® Meter product series. The Power Xpert Meter power quality instrument monitors critical aspects of an electrical distribution system. This premier power quality metering instrument uses the latest in advanced technology to make it simple to use, powerful, scalable and highly flexible. Power Xpert Meters offer a new level of intuitive user interface design, presenting critical electrical distribution system information in a simple-to-navigate and easy-to-understand information architecture.

The Power Xpert Meter’s 4000/6000/8000 graphic display visualizes the information from up to 16 Power Xpert PQ instruments. The embedded Web server displays complex power quality data using standard Internet browsers and allows for device configuration from the browser. Both the local graphic display and the embedded Web server present real time, historical and event information in a browser-style graphical format to help the user interpret key circuit information such as current loading, voltage and power levels, power factor, energy usage, I/O status and power quality measurements, as well as harmonic plots, disturbance and transient waveforms, and an ITIC disturbance summary screen.

The Power Xpert 2000 Series Meter offers the same level of intuitive user interface design as the Power Xpert 4000/6000/8000 Meter with its embedded Web server to provide data logging and e-mail and the ability to visualize steady-state harmonic content as well as waveform recording that is critical for power quality analysis.

Since then, the IQ Metering and Protection product family has grown to include additional products for both metering and protective functions.

The IQ 250 and IQ 260 meters provide revenue grade accuracy with standard Modbus® communications and optional I/O capability.

The IQ 130/140/150 meters provide basic monitoring and energy metering for feeder applications and optional Modbus communications.

The IQ 35M provides energy monitoring at the panelboard level as well as retrofit applications.

The IQ 150S/250S provides wireless energy metering.

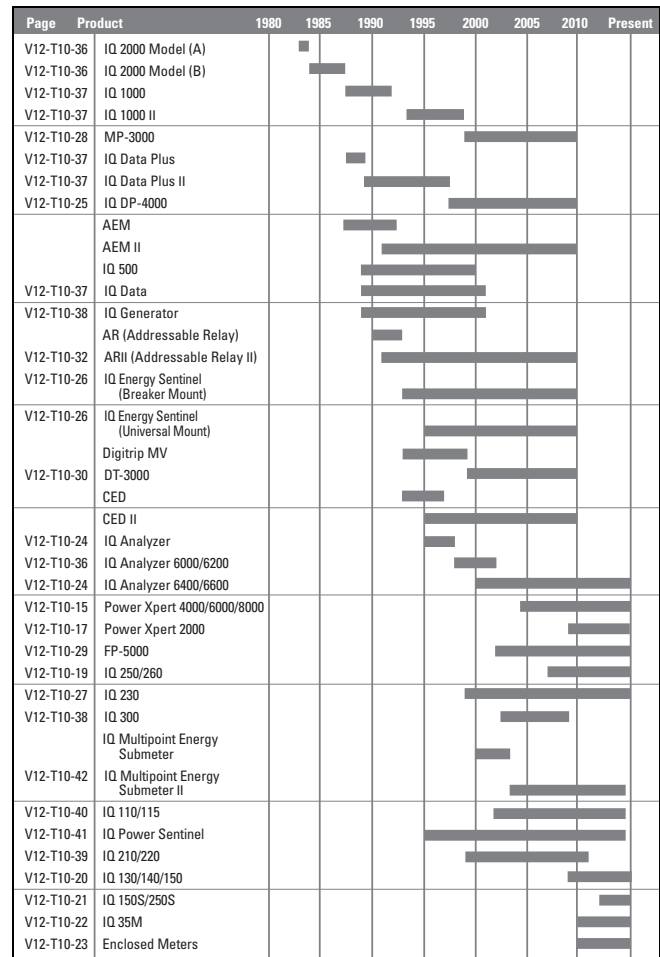

The enclosed metering offering adds flexibility in monitoring with Eaton’s latest line of meters where metering is needed.

The IQ DP-4000 and the IQ Analyzer provide advanced metering functions including the ability to monitor power quality parameters. IQ Energy Sentinels provide a low cost method to monitor energy usage for individual feeders or loads.

The Power Xpert Multi-Point Meter provides cost-effective and space-saving energy submetering for a wide variety of applications.

The MP-3000 added increased motor protection capability. The FP-5000, introduced in 2001, provides overcurrent protection for distribution feeders.

Power Xpert 4000/6000/8000 Series Meters

Power Xpert 4000/6000/8000 Series Display and Meter

General Description

The Power Xpert Meter 4000/6000/8000 Series monitors the critical aspects of an electrical distribution system. This premier power quality metering instrument is simple to use, powerful, scalable and highly flexible.

The Power Xpert Meter 4000/6000/8000 offers a new level of intuitive user interface design, presenting critical electrical distribution system information in simple-to-navigate and easy-to-understand information architecture. The Power Xpert Meter 4000/6000/8000 graphic display visualizes the information from up to 16 meter modules. The embedded Web server displays complex power quality data using standard Internet browsers and allows for device configuration from the browser.

Both the local graphic display and the embedded Web server present real time, historical and event information in a browser-style graphical format to help the user interpret key circuit information, such as:

- Current loading
- Voltage and power levels
- Power factor
- Energy usage
- I/O status
- Power quality measurements
- Harmonic plots
- Disturbance and transient waveforms
- ITIC disturbance summary screen

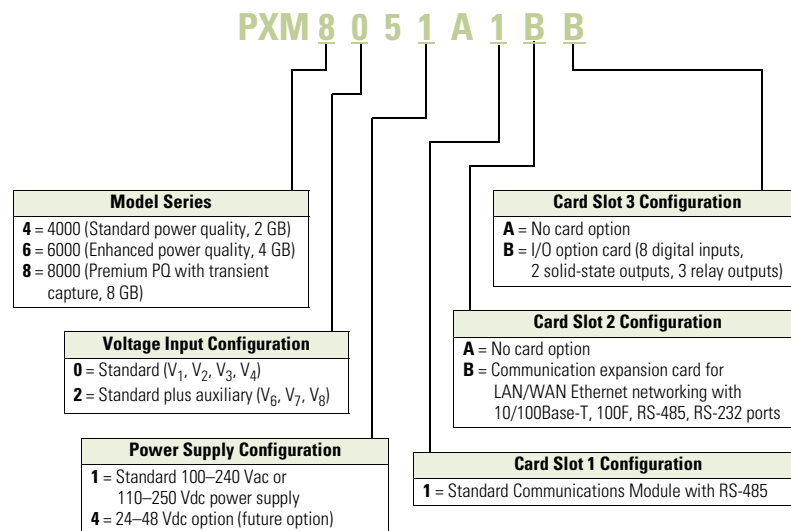

The Power Xpert Meter 4000/6000/8000 graphic display uses a simple “twist and click” navigation control dial to easily navigate the menus and drill down into increasing levels of important detail. A “back” key enhances the browser-like navigation of the graphic display.

The Web server provides the energy and demand readings required to help manage the cost of energy. It also provides critical information regarding power quality, such as harmonic distortion, flicker, crest factor, K-factor and more.

Note: Features and functionality may vary depending on the meter model and options being used. Review the Features and Benefits chart on **Page V12-T10-16** for details.

Catalog Number Selection

Power Xpert 4000/6000/8000 Meter

Example 1: **PXM8251A1BB** (PXM 8000 meter, w/ VAUX, std. pwr., com. exp. and I/O cards)
 Example 2: **PXM6251A1BA** (PXM 6000 meter, w/ VAUX, std. pwr., com. exp. card)

Accessories

Power Xpert Meter 4000/6000/8000

Description	Catalog Number
Graphic display module	PXD-MMG
Communication expansion card for LAN/WAN Ethernet networking: 100FX fiber-optic, 10/100T, RS-485, RS-232	PXMCE-B ①
Digital I/O card: eight digital input, two solid-state output, three relay output	PXMIO-B ①
Panel mounting bracket assembly for back-to-back meter to graphic display mounting	PX-PMBA
Panel mounting bracket assembly for retrofitting a graphic display to an IQ Analyzer cutout	PX-PMBB
Panel mounting bracket assembly for reduced graphic display rear clearance	PX-PMBC
Power Xpert Meter 4000 to 6000 license upgrade key	PXM-4KUPG

Notes

① These items can be ordered separately or preinstalled in the meter by selecting option B in the model number. Communication cable (standard Modbus RTU) is not included in the package for meter module connection.

Features and Benefits

Power Xpert 4000/6000/8000 Meters

Feature	Power Xpert			Benefit
	4000	6000	8000	
General				
Embedded Web server	■	■	■	Use a standard Web browser to monitor and manage the meter over the network, Internet
TOU metering support	■	■	■	Time of usage can be set up to support 4 different schedules
Firmware flash update support	■	■	■	Enables you to flash the meter with the latest firmware updates
Self-learning capability (characterizes “normal” per circuit)	■	■	■	The meter can automatically adjust to the environment and alarm only when “real” events occur
Power, Energy and Demand				
Voltage, current: per phase minimum, maximum, average, trend graph analysis, export, print	■	■	■	Review voltage and current trends, export, print and analyze parameters right on the meter or external software
Energy and demand plot comparisons month-to-month, week-to-week	■	■	■	Plot two months or two weeks for vivid energy or demand comparison
Power: power factor, apparent, real, reactive, frequency	■	■	■	Review power usage and power factor and avoid potential PF penalties
Energy, demand: forward, reverse, net, sum, tou, profile, previous month comparison, graph analysis, export, print	■	■	■	Keep track of your energy usage, compare time of usage and usage against previous month, identify peaks to conserve energy usage
Power Quality Analysis				
Statistical analysis (min., max., average)	■	■	■	Review statistical trends, identify past and future problem areas
Sag and swell monitoring, management and recording	■	■	■	Capture electrical sags and swells and analyze the waveforms
Symmetrical Components: Zero, Negative, Positive	■	■	■	Analyze possibly unbalanced three-phase power systems
Low frequency transient detection and capture	■	■	■	Capture lower frequency transient waveforms for retrospective analysis or e-mailing
Sampling rate, maximum samples/cycle	4096 ^①	4096 ^①	100,000	Extremely high sampling rate will effectively capture impulsive transients
“Number of Nines” uptime data (e.g., 6 nines = 99.9999%)	■	■	■	Review uptime availability per cent
K-factor	■	■	■	Review the ratio of eddy current losses, e.g., when driving nonlinear and linear loads
Crest factor	■	■	■	Review the peak-to-average ratio of the waveform
Security				
Secure 5 level user access privileges	■	■	■	Define appropriate security access level per user
Communications and I/O				
Modbus TCP	■	■	■	Easy integration with standard protocol to power management and other software
Modbus RTU	■	■	■	Integrate meters to existing Modbus networks, daisy chain several (1–16) meters together
HTML	■	■	■	Communicate to the meter over the Internet via standard Web browser
SNMP (simple network management protocol)	■	■	■	Communicate with the meter via Simple Network Protocol; hook to existing NMS system
SMTP (simple mail transfer protocol)	■	■	■	Send e-mail messages via standard Simple Mail Transfer Protocol
FTP (file transfer protocol)	■	■	■	Access, copy, paste, cut waveform capture files on the meter with an FTP Client
NTP (network time protocol)	■	■	■	Network Time Protocol support enables the meter to synchronize time over the network up to the 1 millisecond resolution
COMTRADE, open IEEE Standard file format for Waveform capture export	■	■	■	Import waveform captures in standard IEEE (C37.111-1999) COMTRADE file format to third-party software
DNP 3.0 over Ethernet (Distributed Network Protocol)	■	■	■	Communicate with the meter via DNP 3.0 over Ethernet; hook to existing utility systems
Trend measurements CSV file export	■	■	■	Easily export trend measurements to third-party applications, e.g., Microsoft Excel in standard CSV file format
I/O (8 digital inputs, 3 relay outputs, 2 solid-state KYZ outputs)	■	■	■	The Power Xpert I/O Card is extremely flexible and can be used in a large variety of different applications. Digital inputs and relay outputs can be programmed to interact during various conditions defined by the user. Various third-party devices, such as alarm, pulse meters, trip units, sensors can be easily integrated to the Power Xpert Meter. Triggers and events can be tied to the meters standard functions such as e-mail, logs and trends

Notes

^① Delta-Sigma A/D oversampling rate.

These specifications are subject to change without notice and represent the maximum capabilities of the product with all options installed. This is not a complete feature list. Features and functionality may vary depending on selected options, firmware version and product model. Please refer to the technical data sheet and User Manual for detailed specifications.

Power Xpert 2000 Series Meters

Power Xpert 2000 Series

General Description

The Power Xpert Meter 2000 Series power quality instrument monitors the most critical aspects of an electrical distribution system. This premier power quality metering instrument uses the latest in advanced technology to make it simple to use, powerful, scalable and highly flexible. The Power Xpert Meter 2000 offers the same level of intuitive user interface design as the Power Xpert Meter 4000/6000/8000, presenting critical electrical distribution system information in a simple to navigate and easy-to-understand information architecture.

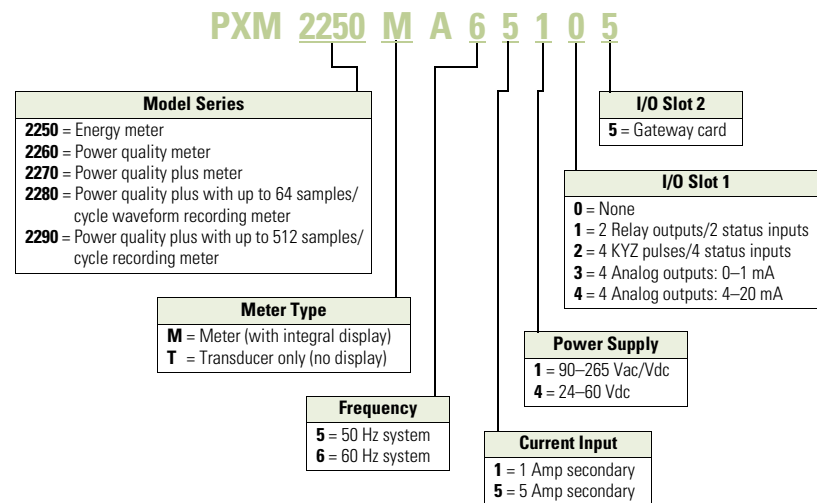

The embedded Web server displays comprehensive power quality data using standard Internet browsers and allows for device configuration from the browser. The embedded Web server presents real time, historical and event

information in a browser-style graphical format to help the user interpret information such as current loading, voltage and power levels, power factor, energy usage, I/O status, power quality measurements, as well as harmonic plots. The embedded Web server also allows for waveform capture and for visualizing steady-state harmonic content that is critical for power quality analysis.

The Web server provides the energy and demand readings required to help manage the cost of energy.

Power Xpert™ Multi-Point Meter

Power Xpert Multi-Point Meter

General Description

Eaton's Power Xpert Multi-Point Meter is an ANSI C12.20 revenue class Web enabled electronic submetering device that can be mounted in panelboards, switchboards or enclosures. When mounted in a panelboard or a switchboard, the Power Xpert Multi-Point Meter provides customers with an integrated power distribution and energy metering solution that saves space, reduces installation labor and lowers total cost. The Eaton Power Xpert Multi-Point Meter (PXMP Meter) offers a highly modular approach to high-density metering applications in electrical power distribution systems. The PXMP Meter is compatible with most three-phase industrial, commercial and single-phase residential low voltage electrical power systems. The PXMP is equipped with two Modbus RTU communication ports for local display and remote serial communications. The PXMP also has optional pulse input and digital output modules along with one standard digital output and three digital inputs. The PXMP Energy Portal Module is Web enabled, making it suitable for use with Ethernet networks and modems.

The Power Xpert Multi-Point Meter can measure up to any of the following number of circuits:

- Sixty single-phase, two-wire (single-pole)
- Thirty single-phase, three-wire (two-pole)
- Twenty three-phase, four-wire (three-pole)

The circuits listed above can be mixed provided that the total number of current sensors does not exceed 60.

The Power Xpert Multi-Point Meter can be used with three different ratings of current sensors: 100 mA, 10 mA or 333 mV. Switchboard/panelboard applications will use the 100 mA current sensors, which are highly accurate, self-protecting in the event of an open circuit condition under load and are supplied with an integral plug-in connector. The PXMP automatically detects the rating of the current sensor that is connected. The PXMP can also use 10 mA current sensors that were previously installed for IQMESII retrofit applications. Additionally the PXMP can use 333 mV split core current sensors for retrofit applications where metering has not previously existed. The 10 mA and 333 mV current sensors are also self-protecting in the event of an open circuit condition under load.

Application Description

The Power Xpert Multi-Point Meter is ideally suited to handle submetering in low voltage power distribution equipment applications with the use of voltage and current transformers.

The Power Xpert Multi-Point Meter provides a cost-effective solution for residential or commercial metering installations, including:

- High-rise buildings
- Government institutions
- K-12, universities and campuses
- Office buildings
- Medical facilities
- Apartment and condominium complexes
- Airports
- Shopping malls
- Industrial sites
- Mixed-use facilities

IQ 250/260 Electronic Power Meters

IQ 250/260 Electronic Power Meter

General Description

The IQ 250 and IQ 260 Meters provide capabilities you would not normally expect in affordable, ultra-compact meters, such as fast sampling rate and accurate metering for a full range of power attributes. Providing the first line of defense against costly power problems, Eaton’s IQ 250 and IQ 260 electronic power meters can perform the work of an entire wall of legacy metering equipment using today’s technology.

When space is at a premium, yet you need ANSI C12.20 accuracy, the IQ 250/ 260 series fit the bill. These meters are ideal for electrical equipment assemblies, machine control panels, such as panelboard and switchboard mains and feeders, low voltage metal-enclosed switchgear feeders and motor control centers. Requiring far less space than other meters with similar functionality, IQ 250/260 series fit into a standard ANSI or IEC cutout on a panelboard or other electrical equipment, and therefore fit easily into retrofit applications.

General Description

With energy costs skyrocketing, you need the ability to verify the accuracy of utility billing and allocation of energy costs among business units, different manufacturing areas or facilities, and tenants. Production equipment and IT systems are vulnerable to power anomalies; therefore, you must ensure that power is always up to specifications. If your infrastructure is an established facility, you may not currently have metering or may have addressed these concerns by deploying a variety of analog gauges and meters—one for volts, one for amperes and so on, with separate meters for each measurement.

If you're planning an upgrade or a new power infrastructure, no doubt you would like to capitalize on the latest technology to improve upon that cumbersome architecture and its patchwork view.

IQ 35M

IQ 35M

General Description

The Eaton IQ 35M Meter is a DIN rail meter that combines exceptional performance and easy installation to deliver a cost-effective solution for energy and power monitoring applications, as well as sub-metering applications. Most models include pulse output, alarm contact and phase alarms for true versatility. The BACnet version offers two digital inputs for accumulating other meter pulses in place of the digital output and alarm contact. The Modbus output options offer added flexibility for configuration and data analysis. The IQ 35M allows you to:

- Verify energy bills
- Make informed load shifting and shedding decisions
- Fairly and accurately allocate energy costs to users
- Identify wasteful practices
- Decrease unnecessary usage
- Produce an energy profile
- Secure the optimum utility rate structure

Enclosed Meters

NEMA 12 Single- and Multi-Unit Enclosed Meters

General Description

The Eaton enclosed meter line provides a complete energy metering and data acquisition solution in a single enclosure. Designed for Eaton's IQ 35M, IQ 150, IQ 250/260, and Power Xpert® 2000/4000/6000/8000 and Multi-Point Meters, Eaton's enclosed meter line offers mounting and installation flexibility, especially in retrofit applications where no metering compartment or mounting space is available in the existing electrical distribution equipment or where installation time is a premium. Factory designed and wired, Eaton's enclosed meter line offers savings in labor and installation costs because input current and voltage wiring as well as I/O wiring is prewired to terminal blocks inside the enclosure.

The enclosed meter line has two standard offerings: single-, prewired unit (specific IQ 150, IQ 250/260, PXM 2000, PXM 4000/6000/8000 or PXMP) and a multi-unit (specific IQ 150, IQ 250/260 or IQ 35M models). Because the multi-unit automatically includes Eaton's Power Xpert Gateway 200E, it facilitates measurement and verification of the energy usage on processes and in buildings. This provides a convenient way to monitor energy usage from multiple points, collect and log specific energy use parameters, and display and generate logs for historical energy usage reports. Simply put, Eaton's

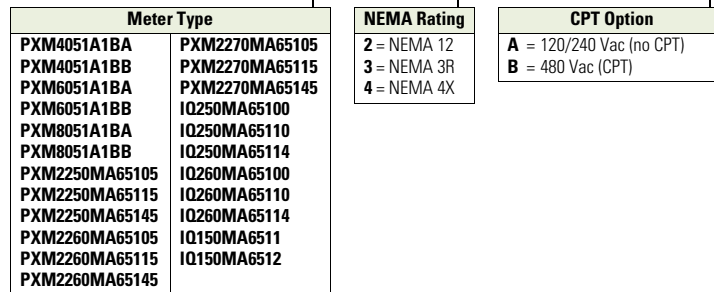

multi-unit enclosed meter solution helps meet any measurement and verification requirement to show energy efficiency improvements and

results. In addition to the standard offering, Eaton can also provide an enclosed metering solution tailored around your project needs.

IQ Analyzer 6400/6600**IQ Analyzer 6400/6600****General Description**

Eaton's IQ Analyzer 6400/6600 is a complete solution for users who want to monitor all aspects of their electrical distribution system. It provides extensive metering, power quality analysis, remote input monitoring, control relaying, analog input/outputs and communications capability. All programming can be done through the faceplate or through the communications option. Its online Help pushbutton feature displays information on device operation, programming and troubleshooting.

Features and Benefits

- All information is accessible through the communications port
- Quality true rms readings through 50th harmonic
- Meets ANSI C12.16 Class 10 revenue metering specifications
- Accurate readings for non-sinusoidal waveforms with up to 3.0 crest factor
- Screens display auto ranging units, kilo units and mega units as needed
- 10-digit energy readings
- Displays multiple parameters at the same time
- Programmable custom screens

The new IQ Analyzer Model 6600 with waveform display at the device and sub-cycle

voltage disturbance capture provides the capability to monitor a wide range of harmonic parameters. These include harmonic voltage, current magnitudes and phase angles as well as system disturbances such as transient voltage disturbances and sub-cycle voltage interruptions.

IQ DP-4000/4100**IQ DP-4000/4100****General Description**

Eaton's IQ DP-4000 is a microprocessor-based meter providing complete electrical metering and system voltage protection. In one compact, standard package the IQ DP-4000 provides an alternative to individually mounted and wired conventional meters and switches. The IQ DP-4000 also monitors apparent power (VA), reactive energy (VAR-hours), apparent energy (VA-hours), and % total harmonic distortion (THD) to provide the user with basic power quality information. The IQ DP-4000 meets and surpasses UL/CSA/CE standards.

Features and Benefits

- Space savings in structure—replaces conventional individual metering devices
- Standardization of design—one door-mounted device
- Direct voltage input up to 600V
- New DIP switch design
- Standardization of CT and PT connections
- With additional PTs and set points the device can be used in HV setting
- Relaying included in I/O module (Model 4100)
- Optional interface capability to computer network for data collection, storage and/or printout via PowerNet—Eaton leading power distribution monitoring network
- Retains present parameters through power failure with non-volatile memory

IQ Energy Sentinels™**IQ Energy Sentinels**

Eaton's IQ Energy Sentinel is a highly accurate, microprocessor-based submeter designed to monitor power and energy readings. It represents an alternative to installing separate wattmeters, watthour meters and watt-demand meters.

Key advantages include unmatched savings in space, lower installation costs, and the capability to communicate data readings in a variety of ways.

IQ Energy Sentinels with built-in CTs and communications have the added benefit of greater overall system accuracy. Conventional metering often is less accurate because external CTs and separate transducers may each have inaccuracies of 1% or more.

The IQ Energy Sentinel provides a unique and cost-effective method to implement energy submetering at lower levels in the distribution system economically.

Submetering application examples for the IQ Energy Sentinel include energy monitoring and demand management, product cost analysis, process/machine tool efficiency and productivity improvement. Additional applications include energy cost allocation of tenant billing for commercial, industrial, recreational and residential facilities.

Retrofitting

The space-saving design characteristics of the breaker mount IQ Energy Sentinels allow them to be added to existing Series C® circuit breakers at any time—often with no additional space or modifications required. Or, they may be installed when upgrading to Series C from older circuit breakers—often with no additional space or modifications required.

The Universal Mount IQ Energy Sentinel with internal CTs may be used wherever breaker mounting is not feasible or possible.

The Universal Mount IQ Energy Sentinel for external CTs may be used for monitoring loads larger than 400A or for when the use of existing CTs is desired.

IQ 230**IQ 230****General Description**

Eaton's IQ 230 compact size and flexible mounting capabilities make it perfectly suited for machine control panels such as panelboard and switchboard mains and feeders, low voltage metal-enclosed switchgear feeders, motor control centers, and especially for individual load monitoring. The base module can be display mounted, panel mounted, DIN rail mounted or side mounted. The display fits into a standard 1/4 DIN cutout, and for retrofit applications, a 100 mm ANSI collar is available.

One IQ 230 provides an alternative to an assortment of individually wired and mounted ammeters, voltmeters, ammeter and voltmeter switches, wattmeters, VAR-meters, power factor meters, frequency meters, watthour and demand meters.

ANSI C12 Class 10 revenue metering accuracy makes the IQ 230 an ideal choice for submetering and sub-billing applications.

The IQ 230 can be easily programmed and monitored from the faceplate keypad that features a 4 line x 20 character LED backlit LCD display. Opting for the compatible PowerNet system allows the user to program and monitor the meter remotely from a PC.

Retrofit Opportunities

- Retrofit of existing electrical distribution systems with the IQ 230 for load and energy monitoring
- Five mounting options makes installation easier

Ratings

- Application to 200 kV, no PTs to 600V
- CT ratios selectable 5 to 8000A
- Single-phase two- or three-wire; three-phase three- or four-wire

MP-3000 Motor Protection

MP-3000 Motor Protection

General Description

Eaton's MP-3000 motor protection relay is a multi-functional microprocessor-based protective relay for the protection of three-phase AC motors. Though it may be applied to any size motor at any voltage level, it is most commonly applied on medium voltage or larger motors. The MP-3000 relay is a current only device that provides complete and reliable motor protection, monitoring and starting control functions.

The MP-3000 motor protection relay is available in either a fixed mount, semi-flush case or in a semi-flush quick release drawout case. Both housings are compact and fit a standard IQ cutout.

The optional quick release drawout case features two-stage contact disconnects and self-shorting CT circuit terminal blocks. A spare self-shorting terminal pair is available for use as relay removal alarm or for continuous motor operation (non-failsafe mode) on relay removal. The optional communication module is externally mounted on the fixed mount case and internally mounted in the drawout case.

The MP-3000 motor protection relay has three phase and one ground current inputs. Both a 5A and 1A version are available. The ground protection and metering functions can be used with either a zero sequence ground CT or from the residual connection of the phase CTs. The zero sequence ground CT provides greater ground fault sensitivity than the residual connection. The unit is user-programmable for 60 Hz or 50 Hz operation.

The MP-3000 motor protection relay provides adaptive overload trip characteristics based on motor temperature when motor RTDs are connected through an optional URTD module. Metering of RTD inputs (individual winding, motor bearing, load and auxiliary temperatures) is also provided.

The MP-3000 motor protection relay has two discrete inputs, four Form C (1NO and 1NC) contacts and one 4 to 20 mA analog output. The relay provides maximum user flexibility to configure the I/O. All inputs and outputs (except for the trip output) are user-programmable. In addition, the relay has 10 LEDs for the indication of protection on, program mode, monitor mode, view setting mode, history mode, log mode, trip, alarm, auxiliary 1 and auxiliary 2 operation. A test page in the program mode provides display indication of the discrete input states and testing of the output relays, target LEDs and analog circuit.

A user-friendly operator interface and display provides quick access to the settings, monitored values, motor history and operational logs. Large LED alphanumeric character display provides easy viewing from any angle in any light. Simple keypad operation provides quick and easy navigation through all settings and stored data. The program mode and emergency override buttons are access restricted via sealing provisions and latched cover. An integrated help function provides an online description display of functions, abbreviations and operations.

Optimum Motor Protection

The MP-3000 motor protection relay has been designed for maximum motor operation and protection. It permits running the motor as close to its design limits while protecting it against excessive heating and damaging overload conditions. The MP-3000 field-proven protection algorithms were developed based on motor designs and operating parameters for optimum operation and protection while minimizing nuisance tripping.

The MP-3000 motor protection relay uses a protection algorithm and measurement technique based on proven positive and negative (unbalance) sequence current sampling and true rms calculations.

FP-5000 Feeder Protection

Feeder Protection FP-5000

General Description

- Microprocessor-based protection with monitoring and control for medium voltage main and feeder applications
- Current, voltage, frequency and power protection for electric power distribution systems
- Complete metering of voltage, currents, power, energy, minimum/maximum and demand functions
- Programmable logic control functions for main-tie-main transfer schemes
- Trip logs, event logs and waveform capture for better fault analysis and system restoration
- Data Logger to provide energy usage profiles for better planning, utilization and energy usage
- Compact, drawout case design
- Meets ANSI, UL and cUL® standards
- Multiple setting groups
- ANSI, IEC and thermal protection curves for greater flexibility

Application Description

Eaton’s FP-5000 feeder protection relay provides complete three-phase and ground overcurrent and voltage protection plus metering in a single, compact drawout case. It may be used as primary protection on feeders, mains and tie circuit breaker applications, and as backup protection for transformers, high voltage lines and differential protection. The relay is most commonly used on medium voltage switchgear applications.

The FP-5000 takes full advantage of its microprocessor technology providing the user new freedoms and a wealth of data-gathering features. The relay performs self-checking of all major hardware and firmware protection elements to ensure their operation in the event of a system or component electrical failure or fault. Protection functions are well suited for main and distribution feeder circuit applications. Programmable logic control functions make the FP-5000 relay ideally suited for main-tie-main and main 1/main 2 transfer schemes.

The multiple settings groups can be used for arc flash mitigation when an alternative setting group, set to have instantaneous elements only is activated using a selector switch and the programmable I/O in the FP-5000.

Features and Benefits

The zone interlocking feature can be used for bus protection instead of an expensive and complicated bus differential (87B) scheme. The FP-5000 works directly with the Eaton Digitrip 3000 and Digitrip MV relays. Breaker failure logic provides faster remote backup clearing times for stuck breaker operation.

The FP-5000 provides trip and close circuit monitoring and alarming features. It continually monitors the complete trip and close circuits for continuity and readiness to trip. Open and close pushbuttons are conveniently located on the front of the relay for local breaker operation.

Loss-of-vacuum monitoring is activated when the breaker is open. Residual current is monitored and alarmed if detected.

When an electrical fault or disturbance occurs, the FP-5000 begins to store the following in non-volatile memory:

- Voltage and current sampled data
- Calculated values
- Status of internal protection functions, logic, contact inputs and outputs

Retrieval and viewing of the data is easy, aiding in the quick analysis and restoration of your electric power system.

When the FP-5000 isn’t responding to disturbances in the power system, it’s providing valuable metering information at the relay and remotely. It provides energy usage and demand reading, and can alarm when usage reaches a set value. Power factor measurements can be used for capacitor bank switching to control cover demand. Inboard data trending can provide load profiles for up to 40 days.

FP-5000 Feeder Protection

Digitrip 3000 (DT-3000)

DT-3000

General Description

- Microprocessor-based, three-phase and ground overcurrent relay
- Independent phase and ground measuring circuits and operation
- ANSI, IEC and thermal protection curves
- Fixed mount or drawout design
- Dual-source power supply option for AC control power applications

Eaton’s Digitrip 3000 trip unit (DT-3000) is a multifunction, microprocessor-based overcurrent trip unit designed for both ANSI and IEC applications. The DT-3000 design provides true rms sensing design of each phase and ground current.

It can be power from either AC or DC control power. The DT-3000 can be used for any application where instantaneous and/or time overcurrent protection is required.

The DT-3000 may be applied as the transformer primary protection or as backup to the differential protection. The DT-3000 also has zone selective interlocking to minimize equipment damage resulting from a phase or ground fault in an area where long time and/or short time delay is in use.

DT-3000 drawout case protective relay	DT3001
DT-3000 Chicago version drawout case protective relay	DT3101
DT-3030 drawout case protective relay (24–48 Vdc CE Mark version)	DT3031
DT-3000 protective relay with 120 Vac dual-source power supply	DT3010
DT-3000 protective relay with 240 Vac dual-source power supply	DT3020

The integral Dual-Source Power Supply allows the DT-3000 to operate solely from the main CTs during a fault if the normally connected AC voltage is not available, i.e., an electromechanical or electronic “self powered” relay.

Electrical Power System Protection

The DT-3000 provides phase and ground protection for most types of medium voltage electrical power distribution systems.

Protection curves are similar to those on low voltage power circuit breaker trip units, and provide close coordination with downstream devices, as well as upstream fuse and/or electromagnetic relays. Just one DT-3000 replaces the normal complement of three or four conventional electromagnetic overcurrent relays, an ammeter, a demand ammeter, an ammeter switch and, in some situations, a lockout relay switch (device 86).

IQ Flange

IQ Flange

For applications where extra door-mounting space is required, a flange-mounting unit is available. Eaton's IQ Flange provides an extra 2.50 inches (63.5 mm) of clearance for the device.

Product Selection

IQ Flange

Description	Catalog Number
IQ Flange option, to provide extra clearance when mounting	IQFLANGE

Panel Mounting Adapter Kit for IQ 100/200 Series and PXM 2000 Meters

Panel Mounting Adapter Kit

The flange adapter plate can be installed as follows:

1. Remove the old meter from the panel or door. Many IQ metering products use the typical IQ drilling pattern shown in for mounting.
2. Install the flange adapter plate. Mount it from the rear using the six screws provided in the kit. The flange adapter plate screw hole pattern should match the typical IQ drilling pattern. If not, perform the next step.
3. Drill six holes in the panel or the door to mount the flange adapter plate. Follow the typical IQ drilling pattern. You need only the top, center and bottom sets of holes.
4. Install the new IQ 100/200 Series or PXM 2000 meter in the flange adapter plate. Secure it from behind with four flat washers, lock washers and nuts provided with the meter.

IQ DC Power Supply

IQ DC Power Supply

The IQ DC Power Supply is a DC to AC inverter module intended for use where DC power is available, but some AC is required. The unit will operate an MP-3000 or other AC powered IQ devices requiring no more than 75 VA of power at any power factor.

Product Selection

IQ DC Power Supply

Description	Catalog Number
IQ DC power supply	IQDCPS

IQ Cable

IQ Cable

For applications where remote mounting of the power supply is required, an extension cable is available.

Two types of cable are available. The first (catalog number **IQCABLE**) is for the obsolete IQ Data, Generator, and Data Plus II. The second (catalog number **IQA45CABLE**) is for the IQ Analyzer and IQ DP-4000.

Product Selection

IQ Cable

Description	Catalog Number

IQ Floor-Mounted Enclosure

Two 10-Inch Wide Enclosures (Shown with Optional 10-Inch High Bus Compartment)

Type 1

Standard AMPGARD structure construction, painted ASA-61. To be used as a lineup extension for mounting IQ products. Each 10.00-inch (254.0 mm) wide section comes with (two) doors with “works-in-a-drawer” drawout panel. Each door has three standard IQ cutouts with device panels, and can be supplied with or without IQ devices.

Power Modules

Eaton and Westinghouse have produced a number of different meters dating back to the 1980s. Many of these meters used and continue to use power modules to provide voltage sensing isolation and control power to the meter.

Power modules are available to power the meter directly from the voltage source being sensed or for separate control power input. Renewal part power modules are available for the meters shown in the table below.

Current Transformers (CTs)

Current Transformers (CTs)

General Description

Eaton's low voltage current transformers are available in both solid core and split core designs. Engineered for electronic metering applications, all solid core designs and selected split core designs offer ANSI metering quality accuracy. The solid core designs also meet ANSI C57.13 relay accuracy requirements including over-ranging capabilities. The current transformer offering has a 5 ampere secondary at the rated primary current.

Split core CTs are specifically designed to be installed around primary conductors without disconnecting wires or breaking the circuit to be monitored. These current transformers are perfect solutions for energy management applications and are manufactured for installation ease.

Clamp-On Current Transformers

IQ Accessories—Clamp-On CTs

General Description

Eaton's optional Clamp-on Current Transformers (CTs) are designed to be used in cases where there are no existing CTs or the existing CTs cannot be accessed, these clamp-on CTs can be used.

These clamp-on CTs are packaged individually. Most applications will require at least three clamp-on CTs, one for each phase.

IQ 2000

IQ 2000 Model A

IQ 2000 Model B

Recommended Replacement

Production of IQ 2000 devices has been discontinued. The IQ 2000 can be replaced with the MP-3000 electronic motor protective relay and the IQ DP-4000 electronic meter. The MP-3000 provides motor current protective relaying, while the IQ DP-4000 provides complete electrical metering and voltage protective alarming functions. For specific application consideration, contact your local Eaton Field Sales office.

IQ Analyzer 6000/6200

IQ Analyzer 6000/6200

Eaton’s Cutler-Hammer IQ Analyzer 6000/6200 is a complete solution for users who want to monitor all aspects of their electrical distribution system. It provides extensive metering, power quality analysis, remote input monitoring, control relaying, analog input/outputs and communications capability. All programming can be done through the faceplate or through the communications option. Its online Help Pushbutton feature displays information on device operation, programming and troubleshooting.

Features and Benefits

- All information accessible through communications port
- Quality true rms readings through 50th harmonic
- Meets ANSI C12.16 Class 10 revenue metering spec
- Accurate readings for non-sinusoidal waveforms with up to 3.0 crest factor
- Screens display auto ranging units, kilo units, mega units as needed
- 10-digit energy readings
- Displays multiple parameters at the same time
- Programmable custom screens. The IQ Analyzer Model 6200 with waveform display at the device and sub-cycle voltage disturbance capture provides the capability to monitor a wide range of harmonic parameters. These include harmonic voltage, current magnitudes and phase angles, as well as system disturbances such as transient voltage disturbances and sub-cycle voltage interruptions. This unit is also available in a portable version.

Recommended Replacement

Eaton’s IQ Analyzer 6400/6600

RTD Modules

Universal RTD Module

Recommended Replacement

The RTD Modules for the IQ 2000 have been discontinued. Now available is the new Universal RTD Module that replaces all of the RTD modules for the Model A and B IQ 2000 units, as well as the IQ 1000, IQ 1000 II and all current IQ metering and protection products.

IQ Data Plus and IQ Data Plus II

IQ Data Plus II

Eaton’s Cutler-Hammer IQ Data Plus was discontinued in 1989 and was replaced by the IQ Data Plus II. The IQ Data Plus II was discontinued in 1998.

Recommended Replacement

IQ DP-4000

IQ 1000 and IQ 1000 II

IQ 1000 II

Recommended Replacement

Both the IQ 1000 and the IQ 1000 II have been discontinued and replaced by the MP-3000 for complete motor protection. A detailed application note (MP3K01R4.PDF) describing replacement of the IQ 1000 II with an MP-3000 is available at www.eaton.com.

IQ Data

IQ Data

Eaton’s Cutler-Hammer IQ Data provides simultaneous current and voltage metering. In one compact, standard package, this device provides an alternative to individually mounted and wired ammeters, voltmeters, and ammeter and voltmeter switches.

Features and Benefits

- Space savings in structure—replaces ammeter, voltmeter, selector switches and frequency meter (IQ Generator)
- Standardization of design—one door-mounted device
- Direct voltage input up to 600V—no additional potential transformers (PTs) required
- User-friendly—field-settable DIP switches
- Standard model derives power from separate source 120/240 Vac supply
- Only two style numbers
- No need to stock multiple units for different current transformers (CT) and PT ratios
- Interface capability to computer network for data collection, storage and/or printout via IMPACC
- Membrane faceplate, designed and tested to perform in a harsh industrial environment (Type 3R, 12)

- Retains preset parameters through power failure with use of field-settable DIP switches (no batteries)

IQ Generator

IQ Generator

Eaton’s Cutler-Hammer IQ Generator provides simultaneous current and voltage metering. In addition, the IQ Generator monitors frequency. This device provides an alternative to individually mounted and wired ammeters, voltmeters, ammeter and voltmeter switches, and frequency meters.

Features and Benefits

- Space savings in structure—replaces ammeter, voltmeter, selector switches and frequency meter (IQ Generator)
- Standardization of design—one door-mounted device
- Direct voltage input up to 600V—no additional PTs required
- User-friendly—field-settable DIP switches
- Standard model derives power from separate source 120/240 Vac supply
- Only two style numbers
- No need to stock multiple units for different CT and PT ratios
- Interface capability to computer network for data collection, storage and/or printout via IMPACC

IQ 300

IQ 300

Eaton’s Cutler-Hammer IQ 300’s thin display and flexible mounting capabilities make it perfectly suited for any application where an accurate, multifunction meter is desired, such as panelboard and switchboard mains and feeders, motor control centers, and both low voltage and high voltage metal-enclosed switchgear.

Features and Benefits

- Bright display with eight large numeric digits along with a 10-character description of the measured value makes the IQ 300 ideal for switchgear mounting
- Base unit can be display mounted for simple, one-hole installation
- Base unit can be mounted up to 10 feet (3m) away from display and has three mounting options

IQ 210/220

IQ 210/220

General Description

Eaton’s IQ 210/220 compact size and flexible mounting capabilities make it perfectly suited for machine control panels such as panelboard and switchboard mains and feeders, low voltage metal-enclosed switchgear feeders, motor control centers, and especially for individual load monitoring. The base module can be display mounted, panel mounted, DIN rail mounted or side mounted. The display fits into a standard 1/4 DIN cutout, and for retrofit applications, a 100 mm ANSI collar is available.

One IQ 210/220 provides an alternative to an assortment of individually wired and mounted ammeters, voltmeters, ammeter and voltmeter switches, wattmeters, VAR-meters, power factor meters, frequency meters, watthour and demand meters.

ANSI C12 Class 10 revenue metering accuracy makes the IQ 200 an ideal choice for submetering and sub-billing applications.

The IQ 200 can be easily programmed and monitored from the faceplate keypad that features a 4 line x 20 character LED backlit LCD display. Opting for the compatible PowerNet system allows the user to program and monitor the meter remotely from a PC.

Retrofit Opportunities

- Retrofit of existing electrical distribution systems with the IQ 210/220 for load and energy monitoring
- Five mounting options makes installation easier

Ratings

- Application to 200 kV, no PTs to 600V
- CT ratios selectable 5 to 8000A
- Single-phase two- or three-wire; three-phase three- or four-wire

IQ 110/115 Electronic Power Meters

IQ 110 Electronic Power Meter

General Description

The IQ 100 Meter family provides capabilities you would not normally expect in affordable, compact meters, such as fast sampling rate and accurate metering for a full range of power attributes. Providing the first line of defense against costly power problems, Eaton’s IQ 100 series electronic power meters can perform the work of an entire wall of legacy metering equipment utilizing today’s technology.

When space is at a premium, yet you need ANSI C12.20 accuracy, the IQ 100 series fit the bill. These meters are ideal for electrical equipment assemblies, machine control panels, such as panelboard and switchboard mains and feeders, low voltage metal-enclosed switchgear feeders and motor control centers. Requiring far less space than other meters with similar functionality, IQ 100 series fit into a standard ANSI or IEC cutout on a panelboard or other electrical equipment, and therefore fit easily into retrofit applications.

Features and Benefits

- Measure and display real-time information about critical power parameters with a sampling rate of 400 samples per cycle
- Monitor power utilization and quality with ANSI C12.20 accuracy (0.5%)
- Verify meter accuracy with KYZ test pulse self-certification capabilities
- Optional Modbus RTU communications
- Available as transducer only or with display
- Designed to accommodate upgrades
- Integrate into Eaton’s Power Xpert Architecture for a holistic system-level view

IQ Power Sentinel

IQ Power Sentinel

General Description

Like the IQ Energy Sentinel, the IQ Power Sentinel is a highly accurate microprocessor-based submeter designed to monitor power and energy. In addition to watts, watthour and watt-demand, the IQ power sentinel monitors current, voltage, reactive power (VARs), apparent power (VA), power factor and frequency. The IQ Power Sentinel offers an accurate and economic alternative to separate meters and transducers.

The IQ Power Sentinel is only available in the universal mount with internal CTs up to 400 amperes.

Features and Benefits

Features

- Monitors (accuracy stated full scale)
 - AC line current (each phase) $\pm 0.5\%$
 - AC line-to-line voltage $\pm 0.5\%$
 - AC line-to-neutral voltages $\pm 0.5\%$
 - Watts (each phase and total) $\pm 1.0\%$
 - VARs (each phase and total) $\pm 1.0\%$
 - VA (each phase and total) $\pm 1.0\%$
 - Apparent Power Factor (each phase and total) $\pm 0.5\%$
 - Displacement Power Factor (each phase and total) $\pm 0.5\%$
 - Demand (total watts) $\pm 1.0\%$
 - Frequency $\pm 0.5\%$
 - Watthours $\pm 1.0\%$

- Built-in CTs version up to 400 amperes
- Panel or DIN rail mounted
- Powered directly off the line
- Built-in communication capability
 - Address set by DIP switches
 - Communication at 9600 baud
 - Noise immune INCOM protocol
- Choice of operator interfaces
 - Subnetwork Master Local Display
 - Breaker Interface Module
 - Power Management Energy Billing software
 - Power Management Software
- UL and CSA listed
- CE mark

Benefits

- One device replaces multiple meters and/or transducers
- Improved system accuracy
- Savings in product cost
- Savings in space
- Savings in installation cost
- No external power source is needed
- Permits remote monitoring and interconnection with programmable logic controllers and building management systems. For further information see section on Power Management Software Systems
- Designed to interface directly with Power Management Software Energy Billing software
- Flexibility—displays what is needed where it is needed
- Power Management Software

IQ Multipoint Energy Submeter II

IQ Multipoint Energy Submeter II

General Description

Eaton's IQ Multipoint Energy Submeter II is a revenue class electronic submetering device that can be mounted in panelboards or switchboards. When mounted in a panelboard or switchboard, the IQ Multipoint Energy Submeter II provides customers with an integrated power distribution and energy metering solution that saves space, reduces installation labor and lowers total cost.

Features and Benefits

The IQ Multipoint Energy Submeter II offers low-cost metering of kW and kWh for multiple tenants of residential and commercial office buildings for one- to three-phase voltage loads not exceeding 347/600 volts. The IQ Multipoint Energy Submeter II contains INCOM networking to chain together multiple meters in locations throughout the facility. See above for a typical apartment building layout.

- Multipoint electrical energy metering
- Built-in communication interface

- Flexible metering configuration
- Monitors single-phase and three-phase loads from 120 Vac to 600 Vac in three voltage ranges
- Monitors power in watts and energy in watthours for up to 16 Current Sensors
- Very low profile design, less than 1.50 inches (38.1 mm) in height
- Energy values stored in non-volatile memory
- Stores extensive energy profile data for each metering point. Can be used to identify coincidental peak demand contribution
- Space-saving stacking design allows two units to be mounted together
- Supports Time-of-Use energy monitoring
- Demand interval adjustable from 5 to 60 minutes
- Measures bus voltage
- Front panel LEDs provide status of unit and communication activity
- Meets rigid ANSI C12.1 and IEC 61036 accuracy specifications for revenue meters
- Can be directly mounted in a UL-approved panelboard or switchboard

PowerNet Software

Integrated PowerNet Support

PowerNet™ (available on the Power Xpert® Software DVD). Updates to the PowerNet system are available; however, the recommended update path is to upgrade to Power Xpert Software. See **Page V12-T11-4** for details on Power Xpert Software.

General Description

The features of Eaton's PowerNet software suite are available as a standard part of Power Xpert Software. PowerNet is a family of software applications, client/server configuration, that help provide a window into an electrical distribution system. Existing PowerNet systems can be easily integrated with Power Xpert Software.

PowerNet Features

- Connectivity bundle
 - Communication to 1000 INCOM™ devices
 - Auto learn of all INCOM connected devices for maximum usability
 - Security configuration
 - Trending/logging configurations
 - Device set point editing/printing/viewing
 - MSDE/SQL data storage
 - Dynamic Data Exchange (DDE) server
 - OLE for Process Control (OPC) server
 - Modbus RTU Gateway to data from Eaton INCOM communicating devices
- Power quality bundle
 - Viewing of captured waveforms
 - Up to eight cycles of actual waveform
 - Zoomed-in view of high-speed waveform samples
 - Spectrum chart showing frequency content and magnitude (Fourier analysis)
 - CBEMA/ITIC representation of events
 - Top down access to specific Waveform events from event lists and CBEMA/ITIC curves
 - Trip curve display for coordination and selectivity needs
 - Log-log coordination curve plotted on-screen for trip units and motor protective relays with the click of a button
- Online modification of trip curve pickups and time delays; instant verification of coordination with an updated trip curve
- Automatic scale adjustment based on device pickup level
- Addition or removal of trip curves directly from the display screen
- Color-coded curves tied to the device description for added clarity
- Overlay multiple curves
- View motor start profiles next to motor protection relay trip curve

PowerNet Digitrip Screen Viewed in Power Xpert Software

Eaton's Electrical Services & Systems

PowerNet Software

Supplementing the hardware and software, Eaton's Electrical Services & Systems can provide local startup and integration services to customize the PowerNet system to your specific business needs. Basic field startup, integration of PowerNet into other plant systems, and remote

monitoring of the plant with industry experts in energy and power quality are all services provided by our local field representatives. These services will ensure that you get maximum return on all of your system investments.

Note: PowerNet systems do not consist of exclusively Cutler-Hammer® (Eaton) products. Hundreds of drivers exist to communicate with many third-party meters, protective relays and PLCs.

Flexible Network Architecture

A PowerNet network can be built in a variety of configurations. Systems can be built using existing Ethernet networks as the backbone, as well as on a dedicated

twisted shielded pair running throughout a facility. Telephone, radio and fiber modems can be used to create networks where it is cost prohibitive to run dedicated cables. The most flexible, highest performance network architecture includes a dedicated twisted shielded pair network within the switchboard or equipment room connecting into a high speed Ethernet backbone. For a layout of a typical facility network, refer to the *15th Edition of the Consulting Application Guide*.

Ethernet Backbone

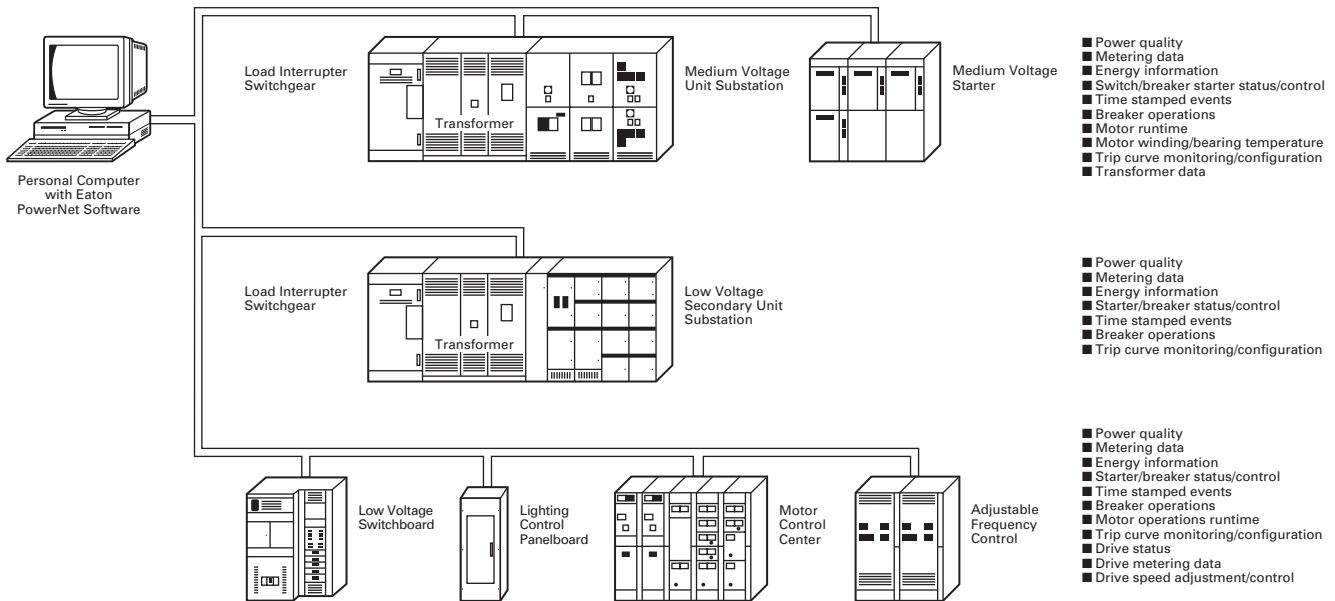

TCP/IP Ethernet networks have become the worldwide standard for moving information. Industry has recognized Ethernet as a high

speed, flexible, low-cost network that is not vendor dependent. The PowerNet network uses a standard TCP/IP Ethernet as the high speed backbone for carrying information to clients across the plant or across the world.

Dedicated Twisted Shielded Pair

Customers who desire to run a dedicated network for the power monitoring network have a choice between a dedicated Ethernet network or running a twisted shielded pair. A network of 1000 devices running up to 10,000 feet can be networked through one twisted shielded pair of wire.

Eaton PowerNet System

Power Xpert Software

General Description

Power Xpert Software aggregates the information arriving from different types of device families via various communication methods. Its unique Web-based design, alarm bubble-up and advanced trend and waveform analysis tools help you to quickly turn your attention to the most important events and to identify reliability issues and cost-saving opportunities. The standard custom graphic package, the Layout Manager, with an icon library and standard vertical templates, allows you to import and mimic your physical environment and gauges. Open protocol support makes Power Xpert Software compatible with most newer generation third-party equipment. Older legacy, proprietary protocols are supported by Power Xpert Gateways (see **Page V12-T11-13**), and custom software drop-in drivers made available by Eaton. Power Xpert Software is the first power system software of this caliber to put all these powerful features at your fingertips.

Product Selection Guide

Power Xpert Software Professional Edition

- Geared toward end users, with built-in support for Eaton power distribution products such as switchgear, UPSs, breakers, PDUs, RPPs, meters, relays, VFDs and MCCs, among others
- Eaton products connect with the software directly via an Ethernet connection, while legacy devices use a Power Xpert Gateway to Web-enable their communications
- A subset of third-party meters and devices are supported as standard via the gateway connection

Power Xpert Software Enterprise Edition

- Geared toward advanced power users, system integrators and enterprises with heterogeneous device spectrum and system developers who can take advantage of the included SNMP and Modbus integration development utilities
- Extensive support for third-party devices via standard SNMP and Modbus TCP protocols
- Large variety of ready made, optional third-party drop in drivers available

Key Features

- Connects to your existing network
- Data trending and graphing for detailed information for troubleshooting, problem prevention and costs savings
- Web-based views that allow access to critical information from any location via a Web browser
- A modular, scalable architecture that allows the addition of capabilities and devices as the power system expands
- Alarm conditions bubble up through the system to allow personnel to identify which device is in alarm and where it is located
- All the functionality of Eaton's PowerNet software suite
- Connectivity to a wide range of Eaton and third-party devices. For a full list of compatible devices, refer to the hardware compatibility list found at www.eaton.com/pxs

Power Xpert Software Layout Manager

The Power Xpert Software Layout Manager module provides the user a library of powerful design tools and standard templates for the creation of custom Human-Machine Interface (HMI) graphical layouts. Objects can be easily animated, various gauges can be selected, and custom bitmaps can be imported with little effort.

For detailed information regarding Power Xpert Software modules, system requirements, supported devices and more, please see www.eaton.com/pxs or the *Consulting Application Guide*, CA08104001E, Tab 2.

Power Xpert Software General Features

Features

General

Web browser user interface
 Web-based monitoring capabilities
 Downloadable software version updates

Event Notification

Event notification via e-mail notification
 Event notification via pagers, text message or third-party interfaces
 Alarm state management
 Event indicator displayed without Web page active
 Alarm/event searching and filtering
 Waveform attached to applicable power event
 Web browser based waveform viewing
 Alarm capabilities based on device driven events

Analysis and Trending

Graphic trend viewer
 Chart or data option selection
 Multiple trends display
 Multiple axis support
 View multiple variables (i.e., Ia, Ib, Ic, Vab, Vbc, etc.) for a single waveform
 Standard COMTRADE file format support
 Customizable trend viewer look and feel
 Fixed or custom time frames
 Trend analysis capabilities
 Data export

Custom Graphics and Layouts

Custom graphics development via Web browser
 Four user view example templates included as standard
 iFrame capability
 Browser portal widget support
 Streaming media support
 Graphic object library included as standard
 ISO standard electrical picture objects available
 Graphic files import capability
 Graphic object animation capability
 Gauge object library support
 External Web Links support
 Alarm bubble-up support through several page layers

Features

UPS Shutdown

File saving during shutdown
 Automatic, orderly and sequential shutdown
 Parallel redundant UPS shutdown capability

Security and Administration

Windows authentication security
 Two tier secure system access support
 SSL
 Secure Web browser access (support for HTTPS)
 Trend object support

Time Synchronization

Time synchronization support for connected devices with 1 millisecond time resolution

Export and Integration

Extended Excel® spreadsheet support
 SQL database query support

Power Xpert Reporting

Power Xpert Reporting Architectural Overview

Power Xpert Reporting brings the power system information together to compare and contrast. Power Xpert Reporting provides a standard set of reports, including:

- **Data Center Efficiency Report:** A summary of data center infrastructure efficiency and power usage effectiveness, including such information as temperature and humidity, and energy consumption

Data Center Efficiency Report

- **Greenhouse Gas Report:** Captures the six offensive greenhouse gasses: carbon dioxide, sulfur dioxide, nitrogen oxide, mercury, methane and nitrous oxide broken down by selected locations within a facility

Greenhouse Gas Report

- **Utilities Report:** Captures consumption of water, air, gas, electricity and steam (WAGES)

Utilities Report

- **Capacity Summary Report:** The summary of top- and bottom-loaded circuits, as well as loading details for each circuit according to user-defined date/time range and facility hierarchy location

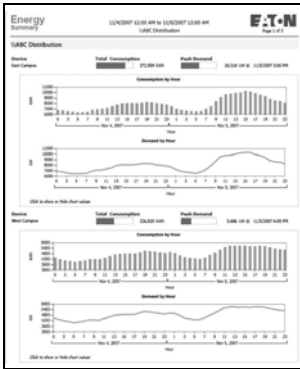

Capacity Summary Report

- **Branch Circuit Monitoring Report:** Determine branch circuit loading levels at a glance with color-coded graphics indicating loading status against capacity. Redundant sources can be reviewed, as well as single source loads

Branch Circuit Monitoring Report

- Energy Summary Report:** The summary of consumption (kWh) and demand (kW) for a user-defined date/time range and facility hierarchy location

Energy Summary Report

- Energy Cost Allocation Report:** The total energy bill dollar value or a cost per kWh across a facility hierarchy for a user-defined date/time range

Energy Cost Allocation Report

- Power Quality Report:** The distribution and trend for amps, volts and THD according to user-defined date/time ranges and facility hierarchy location

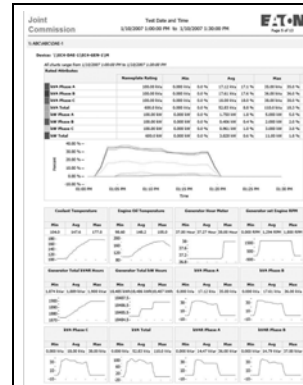

Power Quality Report

- Event Summary Report:** Provides a Pareto chart of events according to user-defined date/time ranges and facility hierarchy location

Event Summary Report

- Joint Commission Report:** Standard Joint Commission Compliant Report supports hospital power test requirements. It checks events, key metrics of generators and automatic transfer switches (ATS) during generator testing at user-defined date/time ranges and facility hierarchy location

Joint Commission Report

Service Offerings
Available Power Xpert Startup Service Packs

At Eaton, we want to make it as easy and non-disruptive as possible to implement our Power Xpert products. Eaton offers several startup service packs from partial help to full turnkey solution implementation.

All services are performed by authorized Eaton's Electrical Services & Systems group personnel.

Startup Service Packs Include the Following Services

- Startup Scope Determination:** Eaton services will help you to evaluate your service needs and check that the service pack you have selected has appropriate coverage for your circumstances
- Pre-Installation Checklist:** Eaton services will contact you to go through the pre-installation checklist, which ensures efficient, prime quality installation and configuration services
- Installation and Configuration:** Eaton services will install Power Xpert Software and configure it for operation according to startup scope determination. Configuration may also include creating custom graphic layouts if necessary and if required
- System Test:** Eaton services will test the Power Xpert Software for operability and will validate communications with key components
- Optional Hands-On Training:** If required, Eaton services can provide hands-on training for Power Xpert Software, using the software on-site or using simulated demo systems

Selecting the Appropriate Service Pack ①

Startup Service Product	Number of Eaton Devices to be Integrated				Non-Eaton Devices ③
	<15 ②	15-30 ②	31-75 ②	>75 ②	
Power Xpert 1 Day	■				
Power Xpert 2 Day		■			
Power Xpert 5 Day			■		
Customer Fixed Price Quote ④				■	■

Notes

- ① Available and valid in continental United States only.
- ② Typical number of Eaton devices that can be configured in the Power Xpert Software during the course of the selected Startup Service Pack.
- ③ We strongly recommend a review of the latest Hardware Capability List at www.eaton.com/pxs.
- ④ Please call the Technical Resource Center for custom Startup Service at 800-809-2772, option 4, 1, for a price quote.

The number of devices that can be configured during the course of a selected Start Pack can vary depending on the devices' installation readiness levels. Maximum numbers indicated require full configuration readiness levels defined in the Power Xpert Startup Services Checklist document in the service's brochure at www.eaton.com/pxs.

Technology Upgrades

The INCOM network consists of a twisted shielded pair of conductors that interface to one of the following hardware devices:

- Master INCOM Network Translator II (MINT II) attached to the COM port of computer
- Power Xpert Gateway (PXG 200E, PXG 400E, PXG 600E, PXG 800E)

When updating the software at an existing installation, careful consideration should be administered and all new PowerNet interface hardware options considered when constructing the update bill of material.

In some instances, the computer running the Series III software is an industrial computer that has no monitor, keyboard or mouse, and is installed as a part of a larger system solution. This device is referred to as the Power Xpert Gateway, catalog numbers PXG 200E, PXG 400E, PXG 600E and PXG 800E. In these situations, there is, typically, a main system computer that uses additional software solutions to integrate the system. The Power Xpert Gateway is used as a way of using the infrastructure of the currently installed Local Area Network (LAN) as a means of collecting data from remote substations. This is not the only item that will require updating if existing in the system.

Series III system solutions, in some cases, incorporated a lot of non-standard equipment to meet various connectivity needs. In some instances, where multiple COM ports are required, port splitters were used to expand one COM port into 8, or even 16, equivalent COM ports for communications with remote or local MINT II devices (DIGIBOARD). These various system configuration requirements will have to be ascertained and accounted for before updating.

Update Path

Note: When updating the computer for the new system software, ISA slots may not be available. In these instances, PXG-E products are typically employed.

- MINT II devices are compatible with PowerNet and will not require updating
- NetLink products should be replaced with PXG 600E or PXG 800E hardware
- mMINT

For those unique applications that may have Ethernet and Modbus® on the same gateway node. For Ethernet, use the correct PXG-E model, and for Modbus serial, use the mMINT.

In all other instances where custom third-party equipment was used to achieve connectivity solutions, third-party vendors should be consulted for appropriate update paths and careful consideration of compatibility with the new PowerNet software to ensure a smooth update path.

Inventory Existing Series III Software

Series III software consists of the main Series III package that includes the engine communicating to the devices through the MINT II hardware. Series III came in various packages supporting 20, 200 and/or 1000 devices. The Series III software included most functionality in a single operator interface. It included, but was not limited to, the following features:

- Monitoring of all real-time parameters from the configured devices
- Access to change or to view the set points of those devices that support this functionality
- Logging of selected parameters to ASCII Comma Separated Variable (CSV) files
- Device Alarming notification and confirmation viewable via user interface and historically captured in ASCII CSV files
- Built-in Dynamic Data Exchange (DDE) server capabilities

In addition to the basic Series III software package, add-on applications were available that expanded the basic functionality of the monitoring software including, but not limited to, the following features:

- Energy billing and cost allocation
- Waveform display
- Trip curve display
- Modbus Gateway capabilities

Master PC Requirements

When planning to update a Series III system, replacement of the personal computer will be required. Due to the operating system as well as memory requirements, the Series III computer will not meet the requirements for a PowerNet computer.

Update Path

The PC requirements may change with later versions of the PowerNet software applications. Please refer to the Eaton website for updated information on PC requirements: www.eaton.com.

Modbus (Series III Computer as Modbus Gateway)

Used in conjunction with Building Management Systems, Distributed Control Systems, or even PLCs where the Modbus master equipment is connected to the communication serial port of the Series III computer. The Modbus add-on to Series III enables the COM port of the computer to be configured as a Modbus slave, providing the customer the ability to configure input and holding registers.

Update Path

NPMODBUS: Client application that turns the COM port of the computer into a Modbus server application. Client can be located on any computer with appropriate operating system and on the same network as the rest of the PowerNet system software.

NPCOREMOD: Turns the COM port of the computer running the PowerNet software core into a Modbus server. This can only be located where the Core software application is located.

Modbus (Industrial PC as Modbus Gateway)

Used in conjunction with Building Management Systems, Distributed Control Systems or even PLCs where the Modbus master equipment is connected to the communication serial port of the Series III computer. Available for sale was an industrial computer (no monitor, keyboard or mouse) with a Modbus server software application installed. The functionality of the software installed on the industrial PC focuses on Modbus register configuration and availability. Other monitor, DDE and trending features common to Series III are not available.

Update Path

Power Xpert Gateway

RS-232 (MINT II with Custom Driver in Master System)

Used in conjunction with Building Management Systems, Distributed Control Systems or even PLCs. In this case, the customer has written or contracted to have written a custom driver that communicates directly to the installed INCOM devices via the MINT II RS-232 interface.

Update Path

Series III software is not a part of this configuration. There is no update path; the MINT II is still a viable solution. For those applications that connect with the Johnson Controls® Metasys® System via the MINT II and Metasys Integrator, the JMI should be used.

RS-232 (Series III PC COM Port Gateway, Custom Driver in Master System)

Used in conjunction with Building Management Systems, Distributed Control Systems or even PLCs. Most common applications include BMS software such as Johnson Controls Metasys System integration. Where customers implemented this solution, the need for the functionality of the Series III is apparent but the sharing of data is required. When updating to PowerNet, customers must pay close attention to this need.

Update Path

Series III had the ability to configure the COM port of the computer into a gateway, which made the COM port look like a MINT II to the master communicating software application. This functionality is not included in the PowerNet software suite of applications. Connectivity is left to DDE, OPC or Modbus communications. Before updating, the master software suite vendor should be consulted as to which of the above protocols is supported and the appropriate steps for integration taken.

Communications Hardware

mMINT

mMINT Module

Product Description

The mMINT (Modbus Master INCOM Network Translator) Module is an Eaton accessory product that will provide communication between a Modbus RTU network and an INCOM (Industrial Communications) network (see the mMINT in a Communications Network figure). This module is transparent to the Modbus network. It communicates to a master on the Modbus network using the Modbus RTU (Remote Terminal Unit) protocol. It communicates to slave devices on the INCOM network using the IMPACC (Integrated Monitoring, Protection, and Control Communication) protocol. The catalog number of this product is mMINT.

Features

The mMINT module is a slave device on the Modbus network and as such requires a master that will exchange register objects with the mMINT module.

- Handles generic pass-through commands (Modbus/INCOM/Modbus)
- Capable of passing Modbus register objects from Eaton's existing products and newer PnP (Plug-'n-Play) products to a Modbus RTU master
- Data in IEEE® Floating Point format and fixed point
- Modbus RTU communications data transfer rates of 1200, 9600 or 19,200 baud with one start bit, eight data bits, no parity, and either one or two stop bits
- Up to 32 products connected to INCOM network port (246 unique addresses maximum)
- Flashing Status LED to indicate an active module
- LED indicators for INCOM transmit and receive communications exchanges
- LED indicators for Modbus RS-485 transmit and receive communications exchanges
- Input power for the module from either 120 Vac or 24–125 Vdc
- DIN rail mount package
- 0° to 60°C ambient operation

Module Mounting

When mounting the mMINT, verify that an 11 mm H x 28 mm W DIN rail is used and that it is within an enclosed space.

Simplified Wiring Rules

INCOM Network

The following simplified rules apply to a given system consisting of a single daisy-chained main cable link between master and slave devices (see figure below). For more complex considerations including star configurations, please refer to the IMPACC wiring specification T.D. 17513.

mMINT in a Communications Network

- Recommended INCOM cable styles are Belden 9463 or C-H style 2A957805G01
- The maximum system capacity is 10,000 feet of communications cable and 32 slave devices on the INCOM network under the mMINT
- Non-terminated taps, up to 200 feet in length, off the main link are permitted, but add to the total cable length
- Make sure that there is twisted-pair wire that is recommended for IMPACC network use. Use shielded twisted-pair wire to connect each slave to the INCOM network, daisy-chain style. The polarity of the twisted pair is not important

Modbus RS-485 Network

The following simplified rules apply to a given system consisting of a cable link between master and slave devices (see figure below). For more complex configurations, please refer to standard Modbus RTU wiring specification rules for the RS-485 network.

- The recommended Modbus cable has twisted-pair wires (24 AWG stranded 7x32 conductors with PVC insulation) having an aluminum/mylar foil shield with drain wire
- The maximum system capacity is 4000 feet of communications cable and 247 devices on the Modbus RTU network
- Make sure that there is twisted-pair wire that is recommended for Modbus RTU network use. Use shielded twisted-pair wire to connect each slave to the Modbus RTU network, daisy-chain style. The polarity of the twisted pair is critically important

mMINT Module Dimensions

Burden

- 24 Vac/Vdc, 3 VA

Safety Standards

- UL®
- CSA®
- CE mark

Communications Speed

- INCOM: 1200, 9600 baud
- N2 bus: 9600 baud

Power Xpert Gateway 200E

Power Xpert Gateway 200E

Product Description

The Power Xpert Gateway 200E (PXG 200E) is designed to provide a Web-enabled gateway to serially communicating energy meters via a standard Web browser. These can be new or existing meters. The PXG 200E supports revenue grade single and multipoint energy meters via Modbus RTU and INCOM. This product provides a cost-effective, retrofit hardware solution for better energy management without the need for software.

The PXG 200E allows you to:

- Monitor energy usage patterns and reveal opportunities for efficiency improvements using existing communicating meters
- Remotely monitor real-time conditions and profile 5-minute interval trend logs, and export data in csv, without a software implementation
- Allocate energy costs to departments or processes
- Reduce peak demand surcharges
- Reduce power factor penalties
- Identify billing discrepancies
- Allows user to daisy-chain multiple Ethernet compatible downstream devices via RJ-45 port (for specifics, see **Page V12-T11-15, PXG-E Daisy Chain Application**)
- Connect to downstream devices via a Web browser, Modbus master or SNMP client separately or concurrently

Fixed list of supported devices (no ability to add new product support via EDS upload); however, new supported devices will be added during firmware updates.

- IQ 35M
- IQ Energy Sentinel
- IQ 130
- IQ 140
- IQ 150
- IQ 220/230
- IQ 220M/230M
- IQ 250
- IQ 260
- IQ MESII
- DIM KYZ (WAGES)
- EI NEXUS 1200 Series
- PM710

For detailed technical specifications, please reference the Technical Data Sheet for this product at www.eaton.com/pxg, then the Power Xpert Gateway 200E link.

Power Xpert Gateway 200E

PXG-E Daisy Chain Application

The PXG-E allows for units to be connected together through two RJ-45 10/100 connectors on the front of the PXG-E series of products. This arrangement is a pass-through of Ethernet communications allowing a single network drop to

connect up to five Ethernet communicating devices. The maximum length of a copper cable run should not exceed 295 ft (90m) total.

Note: In this configuration, if any of the PXG-E units go offline or lose power, the communication to the downstream Ethernet devices will lose connection to the LAN.

PXG-E Daisy Chain Application

Power Xpert Gateway 400E/600E/800E

Power Xpert Gateways 400E,
600E and 800E

Power Xpert Gateways 400E, 600E and 800E are typically installed in an electrical assembly—a motor control center, low/medium voltage switchgear or switchboard to consolidate data available from components such as trip units, meters, motor controllers and protective relays. It can be installed later to provide the same valuable information.

Product Description

Power Xpert Gateways 400E, 600E and 800E (PXG 400E/600E/800E) provide a cost-effective method to easily Web-enable Eaton and third-party products.

The PXG 400E/600E/800E series offers improved performance over the previously offered series, including logging in the PXG 600E/800E, daisy chaining capabilities (Page V12-T11-19, Figure PXG-E Daisy Chain Application) and design enhancements including a new processor and additional RAM and Flash memory.

The gateway consists of an embedded Web server that allows the user to connect to installed Eaton products such as breakers, meters and relays found in MCCs, LV and MV switchgear and switchboards—to name a few—that communicate via Eaton protocols INCOM and QCPort, in addition to third-party products that communicate via Modbus RTU. The Gateway provides the central connection point for the power metering/monitoring/protective devices, allowing their parameters to be monitored via the Web.

The PXG 400E/600E/800E provide data communications to Eaton's Power Xpert Software and other third-party systems to facilitate centralizing and gathering data for long-term data archival, analysis and trending features.

The PXG 400E/600E/800E are compatible with and facilitate integration with many third-party building and factory automation systems via Modbus TCP and Web services.

Note: Enclosed solution available. Contact your Eaton sales office for more details.

The PXG 600E/800E allow you to enable pre-selected parameters to be trended for each supported device. Selecting the trend symbol will generate a real-time graph for that parameter and can be viewed for the past 24 hours, seven days, 30 days or all past history.

The PXG 600E/800E also offer direct e-mail notifications to up to 10 users. Select from event notifications, data logs, interval log, event logs and heartbeat e-mails.

The PXG 800E brings this communication hardware-only solution closer to those requirements that have previously only been met by a software package. The PXG 800E includes all the functionality of the PXG 600E. Additional features include:

- Creation of custom summary Web pages on the user interface
- Ability to create custom events from existing device parameters or events
- Ability to communicate wirelessly with the SAM3Z submetering system

In the PXG 400E/600E/800E, information is presented in organized, user-friendly Web pages and includes, but is not limited to, the following:

- Device status
- Comm status
- Voltage
- Current
- Power
- Power factor
- Energy
- Power quality
- Temperature
- I/O states

Power Xpert Gateway Screenshots

Downstream devices on the Power Xpert Gateways often report key operating status information that warrants immediate attention. The PXG identifies a set of key status values for each device and generates "Events" in response to changes in these status values. An example of a device event is an overcurrent trip on a circuit breaker.

In addition to displaying events on its home page, the PXG reports events to monitoring software such as Power Xpert Software. These events will then be integrated with those from across the power system, providing unified enterprise level event management.

Power Xpert Gateway 400E/600E/800E

Product Operated Network Interface (PONI) Devices

PONI Family

The Product Operated Network Interface (PONI) cards attach to Cutler-Hammer/Eaton devices to enable communications. These cards serve various functions from Ethernet-type applications, to non-Ethernet-type applications, ultimately playing a key role in facilitating the access to information that each of the Cutler-Hammer/Eaton devices offer.

The IPONI enables communications over a twisted shielded pair INCOM device network. Each PONI attaches to its associated product. The PONI modules obtain power from the host product. PONI modules can be used as solutions for various applications.

The non-Ethernet product offerings include the IPONI and the MPONI. These devices are typically applied where there are more than one device connected in a network of devices by a dedicated twisted shielded pair of conductors (Ref. IMPCABLE).

The communications medium is formatted to enable clean noise-immune communications even when routed around areas of high noise and typical electrical communication disrupting equipment. The IPONI and MPONI daisy chain are in the same format as that used in devices that have built-in communications such as the Digitrip trip units and can be used in series with these communication network wiring. To Ethernet enable IPONI and MPONI products, use the PXG-E series Power Xpert Gateways.

The PXG-E with IPONI or MPONI product offering puts a Cutler-Hammer/Eaton metering product on the Web. No other software is required when specifying a PXG-E. All software needed to enable any internet browser program such as Microsoft Internet Explorer or Mozilla Firefox is packed into the PXG-E. The data can then be viewed directly in any Internet Web browser window. The WEBPONI provides live updating data for the meter being monitored, as well as waveform display capabilities and e-mail direct from the device to defined key e-mail addresses that need to know when an event occurs.

IPONI/MPONI

With the addition of the IPONI or the MPONI card, a Cutler-Hammer/Eaton device or series of devices can communicate with the PowerNet software via a master unit such as a MINT II and the PXG-E. The PONIs can be easily mounted to the appropriate Cutler-Hammer/Eaton device and daisy chain together to form a robust deterministic communication network of devices in a system solution. Systems employing the IPONI/MPONI type communications medium provide deterministic communication performance relied on by those critical solution applications, where this is of the utmost importance.

MINT II

Master INCOM Network Translator (MINT II)

The MINT II interfaces the IMPACC network to a master control unit with an RS-232 port, such as a personal computer serial port, a programmable controller RS-232 "smart card," building management system interface card, etc. (Some software will have to be written in the master control unit to request and receive messages. The MINT II protocol is 10-character, ASCII coded hex.)

The MINT II can be used to interface multiple IMPACC devices to Broadband LANs, telephone modem or short haul modem. It can also be used to allow additional branches of the INCOM data line (five additional branches per MINT II). The MINT II can be either table or panel mounted and requires a 120 Vac, 60 Hz supply. Selectable communication rate of 1200 or 9600 baud is available. The burden for the MINT II is 7 VA.

Addressable Relay II (ARII)

Addressable Relay II

The Addressable Relay II is designed for use where information or control of non-communicating devices is required remotely. The relays communicate on the PowerNet system. Devices are assigned a three-digit address to uniquely identify them on the daisy-chained twisted shielded pair network.

The ARII has a Form C relay on board with two status indicating circuit inputs. The output relay can be activated and monitored remotely. Input status 1 and 2 can be monitored remotely.

IMPCABLE

The IMPCABLE was designed to be run in switchgear where codes require a 600V insulation rating. Typical “blue hose” cables are rated at 300V. The IMPCABLE is an 18 AWG cable with a 100 ohm impedance at 100 kHz tuned to work optimally with the FSK signal from Cutler-Hammer/Eaton devices. The cable has been designed with characteristics that allow up to 1000 devices or distances up to 10,000 feet from the master.

Programmable Logic Controllers

Product Description

D32LT

D32LT

Cutler-Hammer® D32LT from Eaton's electrical business handles applications that are too large for a D50 but don't quite need the power and performance of the D320. The D32LT is expandable up to 256 I/O points, capable of handling analog, digital, high speed inputs and outputs making the D32LT one of the more versatile PLCs on the market. With access to the real-time clock, 8 PID loops and two communication ports allow you to interface with multiple networks including Modbus® RTU, ASCII, binary, or interface to a RS-232 to Ethernet adapter.

D320

D320

The D320 PLC delivers superior processing power, modular flexibility, enhanced scan speed, and advanced functions and communications capabilities with a combination of 2K program memory, up to 2048 I/O expansion points, real-time clock functionality and PID loop control capability. I/O modules cover all standard control voltages and current ranges for both digital and analog signals. Special function modules provide an array of specific-purpose solutions, such as networking and remote I/O applications.

Product History

The company has offered programmable controller products since the early 1970s.

These products have been marketed under several trade names such as Numa-Logic and model names such as D100.

Westinghouse entered the solid-state logic and control business with the Numa-Logic 300 series products. The 300 series was a set of hardwired logic components that could be custom wired to perform the desired logic functions.

Westinghouse NL-500

The Numa-Logic 500 was a remote I/O system that consisted of a "master" chassis and a "slave" chassis connected by a single twisted pair cable. Signals entered into one chassis would be repeated over the twisted pair and made available as a signal at the opposite chassis.

Chronology

1975 through 1980 (largely superseded by remote I/O capabilities of PC700 and PC900).

Replacement

D320 Remote I/O PLC.

Note: NL-500 is different than PC-500.

Westinghouse PC-700

The PC-700 was a programmable controller that supported up to 256 digital and 32 analog I/O, either local or remote with up to 8K of memory.

Chronology

1980 through 1998.

Replacement

D32LT PLC.

Westinghouse PC-900

The PC-900 programmable controller supported up to 128 digital and 16 analog I/O, either local or remote with up to 3.5K of memory.

Chronology

1981 through 1998.

Replacement

D32LT PLC.

Westinghouse PC-1100/1200/1250

This family of programmable controllers featured built in LAN, PID functions and supported up to 16K memory.

Chronology

1982 through 1998.

Replacement

Direct replacement unavailable, best replacement D32LT or D320 PLC.

Westinghouse I/O Plus

Operator interface that was originally manufactured by Cincinnati ElectroSystems and brand-labeled with the Westinghouse logo for Westinghouse.

Chronology

1989 through 1992.

Replacement

No direct replacement available, but the PanelMate product family provides far more functionality.

Westinghouse PC50/55

Programmable controller manufactured by Siemens® (S5-90, S5-95 for PC50 and PC55, respectively) and brand-labeled with Westinghouse logo for Westinghouse.

Chronology

1992 through 1994.

Replacement

Siemens still offers replacement parts for this system.

Westinghouse PC-500

Programmable controller manufactured by Siemens (S5-100U, S5-102U, S5-103 for PC500, PC502 and PC503 respectively) and brand-labeled with Westinghouse logo for Westinghouse.

Chronology

1988 through 1997.

Replacement

Siemens still offers replacement parts for this system.

Westinghouse PC-2000

Programmable controller manufactured by Siemens (S5-115U) and brand-labeled with Westinghouse logo for Westinghouse.

Chronology

1988 through 1997.

Replacement

Siemens still offers replacement parts for this system.

Eaton entered the market with its first programmable control in 1977. The unit was called the D120 and was a true programmable control with no hardwiring required.

Many models have been introduced since then.

Today, three PLC product families are available: D50, D32LT and D320. One software package can program each of these platforms. Contact your local Eaton salesperson or distributor for more details.

Replacement Capabilities Discontinued Products

100/110 Series

100/110 Series

The Numa-Logic 100/110 Series, known as “the Pico,” consisted of the PC-100 and PC-110 models. Both products were “brick” style PLCs and provided a small number of digital inputs and outputs mounted in the same enclosure as the processor.

Various styles offered the ability to select the type and amount of I/O required. I/O expanders were available to expand the I/O capacity.

Chronology

The 100/110 Series PLCs were offered as current product from 1981 until 1989. In 1989 the product was discontinued.

Replacement

No direct replacement available, contact a local Eaton salesperson or distributor about upgrading to a D50, D32LT or D320 PLC.

300 Series

300 Series

The Numa-Logic 300 Series was Westinghouse’s original solid-state controls offering. The 300 Series consisted of printed circuit boards (modules) that performed specific logic functions (AND, OR, NOT, etc.). These modules could then be custom wired by the user to perform the required control functions.

All 300 Series components can be identified by catalog numbers of NL-3XX.

Chronology

The Numa-Logic 300 Series products were manufactured by Westinghouse beginning in the early 1970s and continuing until 1988. Replacement products are currently available from Instrument Specialties, Inc.

Replacement

For replacement of the 300 Series, contact:

Instrument Specialties, Inc.
248-542-5640

400 Series

The Numa-Logic 400 Series was Westinghouse's first PLC offering. After being manufactured for two years, the 400 Series was replaced by the 700 Series of products. Few, if any, 400 Series systems remain in service today.

Chronology

The 400 Series was manufactured by Westinghouse in Madison Heights, MI from 1975 until 1978. The product was no longer manufactured after 1979.

Replacement

No direct replacement available, contact a local Eaton salesperson or distributor about upgrading to a D50, D32LT or D320 PLC.

D120 Series

D120 Series

The D120 family of PLCs consisted of several I/O cards and the racks used to mount them.

The self-contained troubleshooting was identical in concept to the buzzer and jumpers common to relay controls. The D120 requires no new language. It utilizes decimal numbering and memory size is determined simply by adding all elements on the ladder diagram.

Chronology

The Cutler-Hammer D120 products were offered from 1976 through 1983.

Replacement

For replacements of the D120 products, contact:

ATS Inc.
Peoria, IL
1-800-328-7287

MPC1 Series

MPC1 Series

The MPC1 was a complete PLC system for applications up to 128 I/O. Programmed in easily understood relay ladder logic with digital and analog capabilities. Analog processor has the same functions as the discrete version and supports "intelligent" analog input and output modules.

Chronology

The Cutler-Hammer MPC1 products were offered from 1983 through 1993.

Replacement

For replacements of the MPC1 products, contact:

ICS Inc.
Decatur, IL
217-422-6700

D500 Series

D500 Series

The D500 family of PLCs consisted of several I/O cards and the racks used to mount them. The D500 was a full function programmable logic controller offering all of the capabilities of larger frame PLCs in a compact, economical, space-saving design.

Chronology

The Cutler-Hammer D500 products were offered from 1985 through 1994.

Replacement or parts are no longer available for D500 products.

Product Support Services

Technical Application Assistance

Eaton can provide technical application assistance via the Technical Resource Center. Available by telephone, Eaton personnel quickly respond to customer needs, including troubleshooting, analyzing system operation, and coordinating component repair or replacement. The Technical Resource Center can be reached at: **1-800-356-1243**

Overview

Type N Contactor

Citation Starter

Product Description

Cutler-Hammer® Starters and Contactors from Eaton's electrical business were and are designed to control functions of a connected motor by starting, stopping, reversing, regulating and protecting. When functions do not include speed regulation, this device is known as a starter rather than a controller.

Applications for starter functions are fans, pumps, constant horsepower, constant or variable torque machine tools, constant torque metalworking machinery, variable torque and horsepower fans and blowers, constant power heating, lighting, pumps and motors for all types of applications.

Product History

Freedom

The Cutler-Hammer line of contactors and starters dates back to the early 1920s in Milwaukee, WI. Changes in coil construction, making the first moisture-proof vacuum with impregnated coils, were innovations in this line of contactors and starters manufactured before the 3-Star line (now known as the Pre 3-Star). Eutectic alloy overloads were used later in this design with the design change to the 3-Star line. A few of the new features of the 3-Star line of contactors and starters were the first standard three-coil overload relays, new molding compounds, new metals and cast resin coils.

A200

The Type F magnetic contactor is the first magnetically controlled contactor in our Westinghouse® records. It was open in design, simple in construction and was state-of-the-art due to its magnetically controlled armature. The Type F contactor was replaced by the DE-ION® contactor, which featured the Westinghouse trademark DE-ION arc quenching. The DE-ION was followed by the Type DN, Type N and the Type A, today known as the A200. The Type B was developed in the late 1970s and was obsoleted two or three years later. The A200 open control is still a current offering. Prior to 1985, some of the larger sizes (5–9) were known as GCA and GCD.

The Citation line of contactors and starters was introduced in 1968 with many new features: the new CI non-wearing totally enclosed permanent air gap magnet structure; dual wound magnet coil with plug-in feature; color coded, twin break dust-safe contacts; and straight-through wiring. Although the Citation line was obsoleted in 1997, replacement contact kits, magnet coils and heater coils will continue to be available.

Today, the Freedom™ contactor, launched in 1986, is the flagship NEMA offering while **XT** is the IEC offering.

Note

① Although the number "9" is not imprinted on the coil, it must be used when ordering. For example, the proper ordering number for a 120V, 60 Hz, AC magnet coil would be 9-1887-1 (refer to the style numbers on **Page V12-T13-7**).

Sizes 4–6—Freedom

Sizes 7–8—Freedom

Adapter Plates

The adapter plates make it possible to replace a Citation starter with a Freedom starter and the same mounting holes can be used.

Notes

- ① Citation overload relays are no longer available. Replace with up-to-date starter, or contact Standard Open Control Aftermarket at **1-800-535-8992** to determine Freedom overload relay compatibility.
- ② No longer available. Replace with up-to-date overload relay or starter.
- ③ Will no longer be available once stock is depleted. If stock is out, replace with up-to-date overload relay or starter.
- ④ On Vista; no price.

Heaters

Overload relays do not include heaters. Please see table for heater element index.

Heater Selection

For Replacement in Existing Applications Only

Heaters are rated to protect 40°C rise of motors; and, open and drip-proof motors having a service factor of 1.15 where the motor and the controller are at the same ambient temperature.

For other conditions:

1. For 50°C, 55°C and 75°C (122°F, 131°F and 167°F) rise motors and enclosed motors having a service factor of 1.0, select one size smaller.
2. Ambient temperature of the starter lower than the motor by 26°C (79°F), use one size smaller.
3. Ambient temperature of the starter higher than the motor by 26°C (79°F), use one size larger.

Ultimate tripping current of heaters is approximately 1.25 times the minimum current rating listed in the tables.

Heater Selection Index

Note: Use this index to cross-reference tables on **Pages V12-T13-9 through V12-T13-21.**

Notes

- ① Model C contact kits and coils 00-4, two-, three-, four- and five-pole contactors are same as Model J. All other parts are unavailable.
- ② Use quantity two—373B331G11 (two-pole kit).
- ③ Use one each of 373B331G11 (two-pole kit) and 373B331G12 (three-pole kit).
- ④ Mounting hardware included.
- ⑤ Dual voltage coils. Use only on contactors or starters originally supplied with a dual voltage coil.

Notes

- ① Catalog No. A201/A200 Series replaces GCA/GPD Series. Renewal parts are the same.
- ② Use **477B477G06** for Silver Tungsten applications.
- ③ CT Kit replaces the single molded one CT assembly used on the old Size 6 airbrake. The kit includes a single molded three CT assembly, two busbars and hardware. This CT Kit also replaces the single molded three CT assembly used on the present Size 6 airbrake and Size 6 vacuum contactor.
- ④ Rectifier 125V **2018A40G01** (one required).
- ⑤ Rectifier 250V **2018A40G02** (one required).
- ⑥ Rectifier 600V **2018A40G03** (one required).
- ⑦ These coils require an external rectifier. If the rectifier needs to be replaced, order by the appropriate style number.

**DC Coil Conversion Kit—
Style Number 7864A29G01**

A rectifier circuit converts the AC supply to DC supply. This conversion provides quiet operation and improves pickup and dropout characteristics. All necessary parts are included in the kit.

Manual Reset, Class 20, Thermal Type B Overload Relay

Type B Overload Relay, Panel Mounted

Field-Mountable Alarm Contact

Note: Alarm contact available as factory modification of field mountable. For factory modification, add suffix B.

Application Description

The Type B overload relay is designed to protect industrial motors against overload conditions. Using modern block-type, bimetallic design, this relay will provide Class 20 operation in either single-phase or three-phase applications.

Features

- Ambient compensation standard
- Alarm contact field mountable
- Class 20—600V design
- Inverse time delay trip
- Test trip device for weld check
- High visibility up-front trip indication
- Trip-free reset mechanism

Operation

The Type B overload relay is a bimetallic actuated device. The bimetal elements are operated by precisely calibrated heaters. The heater elements connect either directly in the circuit to be measured, or through current transformers on applications NEMA Size 5 and larger.

As the bimetals are heated by motor current flow, a deflection force is produced. Upon a sustained level of abnormal current flow, the deflection becomes great enough to open the snap action output contact.

Ambient Compensation

The Type B ambient compensated design is supplied as standard on all A200 starters. This design uses a second compensating bimetal responsive to ambient air temperature in the surrounding enclosure. This feature reduces nuisance tripping in applications using compact control panels and motor control centers where internal temperature rise is significant compared to motor ambient temperature. The compensating characteristic is maintained in ambient temperatures from 40°C to 77°C.

Design Standards

UL® 508, CSA®, ANSI/NEMA ICS 2-222.

Price of overload relay does not include heaters. Select from the tables on **Pages V12-T13-30 to V12-T13-32.**

Notes

- ① Includes contactor mounting bracket, overload relay and connection straps to contactor.
- ② For replacement on B200 sizes 00, 0 and 1, use **BA23A** instead of **BA13A** and use **BN23A** instead of **BN13A**.

Auto/Manual Reset, Class 20, Thermal Type A Overload Relay

Three-Pole Panel Mounted

Single-Pole Panel Mounted

Application Description

The Type A overload relay is designed to protect industrial motors against overload conditions. Using modern block-type, bimetallic design, this relay will provide Class 20 operation in either single-phase or three-phase applications.

Features

- Field selectable manual/auto reset
- Alarm contact factory available
- Class 20—600V design
- Inverse time delay trip
- Adjustable trip rating $\pm 15\%$
- Color-coded reset rod: Compensated (gray) Non-compensated (red)

Operation

The Type A overload relay is a bimetallic actuated device. The bimetal elements are operated by precisely calibrated heaters. The heater elements connected either directly in the circuit to be measured, or through current transformers on applications NEMA Size 5 and larger.

As the bimetals are heated by motor current flow, a deflection force is produced. Upon a sustained level of abnormal current flow, the deflection becomes great enough to open the snap action output contact.

Automatic Reset

The Type A overload relay can be supplied as an option on all A200 starters to provide automatic reset operation. The overload relay is always shipped in the non-automatic mode. To set up auto operation, reposition the reset rod by loosening and re-tightening a hold-down clamp at the base of overload relay.

Design Standards

UL 508, CSA, ANSI/NEMA ICS 2-222.

Overload Relay Selection Table

For replacement in existing applications only.

Motor Full Load Amperes	Panel Mounted Catalog Number		Starter Mounted Catalog Number	
	Ambient Comp.	Non-Comp.	Ambient Comp.	Non-Comp.
Single-Pole (One NC Contact)				
0.25–26.2	AA11P	AN11P	AA11A	AN11A
26.3–45.0	AA21P	AN21P	AA21A	AN21A
19.0–90.0	AA31P	AN31P	AA31A	AN31A
19.0–135.0	AA41P	AN41P	AA41A	AN41A
Three-Pole (One NC Contact) ^①				
0.25–26.2	AA13P	AN13P	AA13A	AN13A
26.3–45.0	AA23P	AN23P	AA23A	AN23A
19.0–90.0	AA33P	AN33P	AA33A	AN33A
19.0–135.0	AA43P	AN43P	AA43A	AN43A

Heaters

Price of overload relay does not include heaters. Select from the tables on **Pages V12-T13-30 to V12-T13-32.**

Notes

- ^① Three-pole Type B Overload Relay is a suitable alternative to a three-pole Type A Overload Relay in Manual Reset Mode. For example, use **BA13JP** for **AA13P** and **BN23J** for **AN23A**, etc. (See **Page V12-T13-27.**)

Alarm contact available only as factory modification on Type A relay.

Type FT Fast Trip, Class 10 Overload Relay

Single-Pole Fast Trip, Panel Mounted

Three-Pole Fast Trip, Panel Mounted

Application Description

The Type FT overload relay is designed to protect special purpose motors having restricted thermal and locked rotor capabilities. Using modern block-type, bimetallic design, this relay will provide Class 10 operation in single-phase or three-phase applications.

Features

- Class 10—600V design
- Inverse time delay trip
- Color-coded reset rod—green
- Alarm contact factory available
- Field selectable manual/ auto reset
- Adjustable trip rating ±20%
- Ambient compensation included

Operation

The Type FT overload relay is a bimetallic actuated device. The bimetal elements are operated directly from line current, thus separate calibrating heater elements are not used. The overload relay may be wired directly in the motor circuit, or through current transformers on applications larger than 150A.

As the bimetals are heated by motor current flow, a deflection is produced. Upon a sustained level of abnormal current flow, the deflection becomes great enough to open the snap action output contact.

Overload Relay Selection Table

For replacement in existing applications only.

100–150	FT41P-150	FT43P-150	4	FT41A-150

Notes

- ① Single-pole (one NO–NC contact): Add suffix B.
 - ② Three-pole (three NO–NC contacts): Add suffix B. Example: **FT13PB-12**.
- Alarm contact available only as factory modification on FT relay.

Heaters for Thermal Types A and B Overload Relays

Product Description

Each heater is identified by a catalog number stamped on one terminal. The heater application table indicates the range of full load motor current to which a given heater may be applied.

Heaters should be selected on the basis of the actual full load current and service factor as shown on the motor nameplate or in the manufacturer's published literature.

When motor and overload relay are in the same ambient and the service factor of the motor is 1.15 to 1.25, select heaters from the heater application table. If the service factor of the motor is 1.0, or there is no service factor shown, or a maximum of 115% protection is desired, select one size smaller heater than indicated.

When motor and overload relay are in different ambients and when using non-compensated overload relays, select heaters from the tables on **Pages V12-T13-30** through **V12-T13-32** using adjusted motor currents as follows: decrease rated motor current 1% for each °C motor ambient exceeds controller ambient. Increase rated motor current 1% for each °C controller ambient exceeds motor ambient.

For temperature compensated overload relays, select heaters according to the tables on **Pages V12-T13-30** through **V12-T13-32** and selection information above regardless of ambient.

Protect the starter against short circuits by providing branch circuit protection per National Electrical Code® (NEC®).

Notes

- ① For 200A A202 Magnetically Latched Lighting Contactors, order three-pole contact kit style **672B788G07**.
- ② Model K replaces Model J, offering superior design and life characteristics. Renewal parts are different.
Use parts for proper model only.
- ③ Use quantity two—**373B331G11** (two-pole kit).
- ④ Use one each of **373B331G11** (two-pole kit) and **373B331G12** (three-pole kit).
- ⑤ Use quantity two—**626B187G12** (two-pole kit).
- ⑥ Use one each of **626B187G12** (two-pole kit) and **626B187G13** (three-pole kit).
- ⑦ Use quantity two—**626B187G16** (two-pole kit).
- ⑧ Use one each of **626B187G16** (two-pole kit) and **626B187G17** (three-pole kit).

Notes

- ① Three are required per overload relay.
- ② 125 Vdc can be directly applied to the Size 5 and 6 coil rated for 120V/60 Hz AC (cannot be applied to Size 4).
- ③ 250 Vdc can be directly applied to the Size 5 and 6 coil rated for 240V/60 Hz AC (cannot be applied to Size 4).

**Freedom Series—
NEMA and IEC**
*Originally a Cutler-Hammer
Product*

Freedom

Product Description

The Cutler-Hammer Freedom Series starters and contactors feature a compact space-saving design using state-of-the-art technology and the latest in high strength, impact and temperature-resistant insulating materials. Starters and contactors are available in two rating/configuration styles—NEMA (National Electrical Manufacturers Association) and IEC (International Electrotechnical Commission). The NEMA devices are sized based on traditional NEMA classifications and the IEC devices on international ratings. Internationally rated starters and contactors, as compared to NEMA devices, generally are physically downsized to provide higher ratings in a smaller package.

IT. Electromechanical NEMA

NEMA Full Voltage Non-reversing Starter, Size 0

Product Description

The Cutler-Hammer Intelligent Technologies® (IT.) electromechanical starter from Eaton’s electrical business consists of an IT. electromechanical contact block or contactor and an IT. electromechanical solid-state overload relay as a full voltage non-reversing (FVNR) or a full voltage reversing (FVR) device. Size 00 to Size 5 Starters are factory or field assembled.

XTIEC and NEMA Power Control

XT Family of Contactors

Product Description

Eaton’s line of **XT** Contactors and Starters includes non-reversing and reversing contactors, overload relay and a variety of related accessories. Because **XT** meets NEMA, IEC, UL, CSA, CCC and CE standards, it is the perfect product solution for applications all over the world. The compact, space saving and easy to install **XT** line of contactors and starters is the efficient and effective solution for customer applications from 7A to 2000A and NEMA 0–5.

Advantage™
Originally a Westinghouse Product

Advantage Starter

Product Description

Setting a new standard in motor control, revolutionary in design, Advantage motor starters employ state-of-the-art technology in solving motor control application problems that have existed for ages. Customer focus group input and 66,000 man-hours of engineering ingenuity have been combined to create a motor starter that dramatically extends operating life in a physical space requirement one half the size of conventional motor starters.

Product History Time Line for Advantage Contactors and Starters

Advantage / A200 Series Support and Transition to Freedom-C400 Series Power Control New Technologies

Eaton has consolidated the Advantage and Advantage+ product lines into a single offering effective July 19, 2013. This product consolidation will ensure Eaton’s ability to continue supporting the Advantage installed base.

The Advantage+ series features:

- Enhanced control board circuitry
- Same footprint as the Advantage series
- No change in accessories
- Backwards compatibility of control boards for NEMA Sizes 3–6

As a result of the consolidation, Advantage series part numbers will be replaced by the Advantage+ series.

However, please note the following:

- Replacement control boards for Advantage NEMA Sizes 1L, 1 & 2 are not interchangeable; therefore, Eaton will continue to manufacture these replacement boards
- Overload boards are no longer available. Overloads are to be replaced with a complete starter
- All other sizes will accept an Advantage+ replacement board. Please see the table below for additional details

Replacements for Control and Overload Boards

Offering	Replaced By
Advantage contactors (sizes 1L–6)	Advantage+ contactors (sizes 1L–6)
Advantage starters (sizes 1L–6)	Advantage+ starters (sizes 1L–6)
Advantage overload relays	Advantage+ starter
Replacement control boards (Sizes 1L, 1, 2)	No change: continue to order Advantage
Replacement control boards (Size 3, 4, 5, 6, 5DP, 6DP)	Advantage+ control boards
Accessories	No change

Technology Upgrades

DC Operation

These DC coils have separate pick-up and seal windings. The pick-up winding must be connected to an early break normally closed auxiliary contact block and provide the magnetic force required to close the magnet. As the magnet approaches the closed position, the early break normally closed contact is opened and the holding coil is inserted in series with the pick-up winding.

The early break contact block (C320KGD1) has to be attached to the side of the contactor, taking up one of the positions available for add-on auxiliary contact blocks.

Technology Upgrades

ECN42-ECN44 reduced voltage auto-transformer starter or *IT* solid-state reduced voltage starter.

Notes

- ① When replacing solenoid assembly series 416C160, use adapter plate style 9917D02H01—quantity one required.
- ② These styles replace coil style 296B892G_-. When ordering new style as replacement, customer must order adapter plate 9917D02H01—quantity one required.

ME and MD DC Contactors

Originally a Westinghouse Product

Single-Pole, Cat. No. MD510 with L-64 Auxiliary Contact

Product Description

The Cutler-Hammer ME and MD line of DC contactors were and are designed to control functions of a connected motor by starting, stopping, reversing and regulating. Motor protection is provided when the contactors are combined with an appropriate protective device such as an overcurrent relay.

Application Description

Typical applications for the contactor functions are as variable voltage controller disconnects, fans, pumps, conveyors, rolling mills, cranes, or anywhere a DC motor is used.

Product History

The Cutler-Hammer ME and MD line of DC contactors dates back to the early 1940s in East Pittsburgh, PA, where the development of the M contactors was begun by the Westinghouse Electric Corporation to be used in steel rolling mills and nicknamed “mill duty” devices. Added frame sizes were developed to complete the line in Buffalo in the late

1940s. These devices were primarily mounted on insulating plates and were rear connected for ease of wiring the motor current conductors. In the 1960s, front-mounted MD versions of the devices were developed to mount devices on steel panels because the insulating panels were expensive and difficult to manufacture.

In the late 1970s, rear-connected devices were rare and the ME contactor line was created for front connection, with a rear connection kit available and the M rear connected version discontinued. The MR normally closed line was also introduced as a standard at that time.

C80 Mill Type DC Contactors

Originally a Cutler-Hammer Product

Size 2—Two-Pole Contactor

NO Contactor

Product Description

These DC mill type contactors are designed for heavy industry service and are suitable for use on moving machinery. The contactors listed in this section are for surface mounting on steel panels and front-of-panel wiring. The power stud assembly is

mounted on the side of the contactor, rather than as part of a separate mounting kit.

The contactors feature forged steel armature levers and magnet frames for superior physical strength. Self-lubricating bearings eliminate the need for lubricating the contactor.

New hot-molded arc chute assemblies contain no asbestos and have better arc extinction characteristics for longer contact life. The short stroke armature results in a mechanical life of more than 20 million operations.

Notes

- ① Series resistor used with coil for voltage shown.
- ② Magnet closing coil only. If holdout coil is required, give number stamped on coil or advise Bulletin or Serial Number of controller.

511 AC and DC Brakes

Originally a Cutler-Hammer Product

Size 4-Inch Brake and Wheel

Product Description

Cutler-Hammer Type S brakes are field-proven AC/DC brakes. For applications up to 1800 rpm/50 hp. Precision holding and stopping in 4, 5.5, 7 and 10-inch wheel sizes. With 15 standard bore sizes—straight or tapered, non-asbestos linings and off-the-shelf availability, electrically released and spring applied, providing “fail-safe” operation.

The retarding torque developed is directly proportional to the spring pressure.

Typical applications include conveyors, machine tools, printing presses, small cranes, overhead doors, dumb waiters, vacuum molding machines and carnival rides.

- ② Kit contains two linings and rivets for one brake.
- ③ Part number covers one shoe only.

DPM-Contactor

DPM 1000 Vdc Contactor

Product Description

The Cutler-Hammer DPM 1000 Vdc Definite Purpose Contactor has been designed to meet severe environmental and vibration conditions found in your worst applications. The contactor is of unit construction, assembled on a molded insulated base, providing maximum performance in minimum space.

AVD-Contactor

2000 Vdc Contactor

Product Description

The AVD-Contactor is a single-pole normally open, load break, bi-directional definite purpose DC contactor. The device is rated at 1400A continuous and is capable of switching up to 2000 Vdc loads.

D-Contactor

750 Vdc Contactor

Product Description

The D-Contactor is a single-pole normally open, load break, bi-directional definite purpose DC contactor. Two devices are available rated at 1800 and 3000A at 750 Vdc.

Operating Coil Characteristics

Coil Voltage	Current Draw at Nominal Voltage (± 7.5% at 20°C)	Catalog Number
12	3.96	9-1688-15
24	2.00	9-1688-7
32	1.44	9-1688-9
48	1.00	9-1688-12
74	.97	9-2064-3
100	.45	9-1688-8
115	.37	9-1688-2
230	.20	9-1688-1

Product History

The Cutler-Hammer D-Contactor was released for sale in early 1970s. The original device included a permanent magnet blowout coil and square main contacts. The permanent magnet blowout coil device was uni-directional or the current could only flow through the device in one direction. As such, it was essential that the polarity as marked on the power terminals be maintained. The permanent magnet blowout device is no longer offered.

The device was redesigned in the early 1980s to include round main contacts and an intermittent duty blowout coil in lieu of the permanent magnet blowout. The blowout coil device is bi-directional or current can flow through the device in either direction. Although contact life is maximized if the +terminal is at the top of the device, it is not essential that polarity be maintained. The present blowout coil device is a form, fit, function replacement for the original

permanent magnet blowout device. In addition, the present contact kits with the round contacts can be used on the original devices that employed the square main contacts. Subsequent minor product enhancements have been made with the new parts being a direct replacement for the parts that they replaced.

Reversing/Assignment Contactors

1000 Vdc Contactor

Product Description

The Reversing/Assignment Contactor is a double-pole, double-throw, non-load break definite purpose DC contactor. A three-position center-off and a two-position magnetically-latched configuration is available. The device is rated for 1100A, 1000 Vdc. The Reversing Contactor includes cross-over busbars for DC motor reversing applications; the Assignment Contactor omits the cross-over busbars for motor assignment applications.

110	0.33	9-1903-6
125	0.33	9-1903-4
250	0.17	9-1903-8

Product History

The Cutler-Hammer Reversing/Assignment Contactor was released for sale in the early 1970s. The original device incorporated a leaf spring contact assembly and square contacts. The device was redesigned in the

early 1980s to incorporate a coil spring contact assembly with round contacts. The present device is a form, fit, function replacement for the original device. In addition, the original leaf spring contact assembly devices can be

upgraded to the new coil spring contact assembly with the one-time purchase of a contact upgrade kit. The standard contact kit can then be used for subsequent contact replacements.

Technology Upgrades

This product currently listed in **Volume 5—Motor Control and Protection, CA0810006E, Tab 4.**

Note

^① The 6-602-3 contact kit will upgrade the three-position, reversing/assignment device from the original design that incorporated a leaf spring contact structure to the present design that incorporates a coil spring contact structure. The 6-602 contact kit can then be used after the device has been upgraded for the subsequent contact replacement.

P- and S-Contactors

Power Contactor

Product Description

The P- and S-Contactors are single-pole normally open, load break DC contactors. Although the devices have two arc shields, they are functionally single-pole devices. The contactors typically carried a 1000 Vdc, 1000A rating and were applied in locomotive, rapid transit and high horsepower DC drive applications.

Product History

The Cutler-Hammer P-Contactor and S-Contactor were released for sale in the 1960s. These were single-pole DC contactors that used two arc chutes.

They typically carried a 1000 Vdc, 1200A rating and were discontinued in the mid 1980s. A few renewal parts are still available.

Soft Starters

S811+ and S801+ Soft Starter

Product Description

Soft starters serve to provide reduced voltage starting, protection and control for standard three-phase induction motors. They are commonly found in applications like conveyors, compressors, extruders, pumps and blowers, etc.

Reduced voltage starting is beneficial because current and torque are reduced during the motor starting process. This reduces the electrical and mechanical shock experienced during motor starting, prolonging motor and equipment life. Soft starters also provide for maximum efficiency of the motor duty cycle by electronically sensing the motor load and reducing the voltage applied to the motor when it is running at less than full load torque.

Soft starters also provide short circuit and various types of electronic protective functions. Common features include phase loss, undervoltage, current balance, phase rotation, current limit, overtemperature, etc.

Soft start controllers are similar to reduced voltage motor starters, except they include no overload or short-circuit protection. Soft start controllers are applied in series with conventional electromechanical starters to provide the benefits of reduced voltage starting at lower cost. Electromechanical starter contact life is also improved by the soft start controller.

Product History

Eaton’s present line of Cutler-Hammer soft starters is the culmination of 38 years of product development. In 1958, Vectrol Engineering began manufacturing SCR Gate Driver circuitry and progressed into their own soft starter product line, known as the Vectrol Motor Starter (VMS). In 1980, Vectrol was purchased by Westinghouse. The VMS was quickly phased out of production and the Vectrol ES (Energy Saver) solid-state reduced voltage starter was introduced. The Vectrol ES combined features of automatic power factor adjustment and reduced voltage, maximizing the efficiency of the motor duty cycle. The Vectrol ES starter was actively manufactured until 1988 when the Easy-Start Motor Starter was introduced.

Eaton entered the market in 1975 with the A415, A445 and A485 product lines. By 1983, Eaton had released the A515/A545 Model A solid-state reduced voltage starter and followed up in late 1984 with the improved Model B A515. This starter used a solid-state controller, an overload relay and a six SCR full-wave power section. In 1988, Westinghouse introduced its Easy-Start and Easy-Start Jr. product lines that also used a solid-state control circuit and a six SCR full-wave power section. In 1995, the newly formed Solid-State Motor Control Division (SSMC) of the new Eaton released the Easy-Start EA Reduced Voltage Starter, combining the voltage control of SCRs with the durability of the Advantage motor starter into a uniquely small package.

The EA, EJ and the ES product lines have been replaced by the S801+ and S811+ line of soft starters. Introduced in October of 1999, the S801+ and S811+ soft starter is compact, easy to install, easy to program and is the most advanced soft starter available anywhere.

Adjustable Frequency AC Drives

Product Description

Cutler-Hammer Adjustable Frequency Controllers (AFCs) serve to provide adjustable speed and control for standard AC induction motors. AFCs rectify the incoming AC line voltage to supply a fixed potential DC bus. An inverter section is employed to invert the DC bus voltage to an adjustable frequency output voltage. The solid-state logic section

controls the inverter and ultimately the magnitude and frequency of the output voltage to the motor. Input to the solid-state logic can be manual (from an operator type keypad) or automatic (from design features programmed into the drive logic).

The advent of microprocessor-based logic and the advancements of solid-state power technology have dramatically reduced the costs of AFCs and enhanced

their product features. This has permitted a more economical solution for adjustable speed motor applications because AFCs permit the use of standard squirrel cage induction motors instead of DC motors, which are more expensive and harder to maintain. AFCs are ideal for variable torque applications like centrifugal pumps and fans, and constant torque applications like conveyers and extruders.

Eaton's Electrical Services & Systems (EESS) has trained technicians nationwide. See **Tab 22** in this catalog for further information about EESS capabilities.

Technology Upgrades

The SVX9000 improves upon the SV9000 with modular construction and greater program capability. Clean power, 18-pulse configurations are available to meet IEEE-519 requirements for electro-magnetic compliance. The HVX9000 provides a simpler parameter set geared toward the HVAC industry, and the HVX Intellipass provides automatic bypass with 24 Vdc control. Additionally, the MVX9000 gives customers a compact, low-cost alternative to the full-featured drives of 10 hp or less. The same general controls are available, with the exception of closed-loop (encoder) control. The MVX9000 boasts a PLC-like control in the form of a step sequence program for repeated process applications. These units combine digital microprocessor control, a user-friendly keypad, IGBT technology, and a Windows®-based programmer to provide an adjustable frequency drive that can be customized to almost any application.

Note

^① The AF-1500, Accutrol 110 and Accuflow Jr. are identical units.

Synchronous—Relay or Solid-State Mark V Slipsyn for Brush and Brushless Motors

Product Description

Synchronous Motors

Polyphase synchronous motors are used primarily to obtain high pullout torques, constant operating speed, or generation of leading reactive kVA for power factor (PF) correction. To bring a motor to a constant speed, DC power is applied to a special winding in a synchronous motor. This winding is called a field coil winding and is controlled by "field control." Power (DC) for a brush type motor is usually supplied with the starter and entails using an exciter. Power (DC) for a brushless type motor is supplied by an exciter mounted on the motor.

Synchronous Motor Control

Synchronous motor "field application control" generally includes a synchronous device to apply DC power to the motor field circuit at the optimum speed. It may also include protective features such as locked rotor protection, failure to synchronize, incomplete sequence, field failure, pullout protection, etc. depending on the type of field application control selected.

Relay Type vs. Solid-State Type—Mark V

Relay Type

The relay type used the ASR synchronizing relay. Inherent in using the relay type are the problems that are associated with using contacts or mechanical closing devices such as arcing, spring and bearing deterioration and wear, dirty atmospheres, etc.

Solid-State—Mark V

The Mark V is 100% solid-state and features a "soft-turn-on" circuit that applies DC field voltage to the motor field. It enables all required functions for correct synchronization to be accomplished without the use of moving contacts or mechanical closing devices.

With the Mark V, the static exciter power supply is always supplied and is part of the "system."

Also available as a modification with the Mark V is a VAR or power factor, DC field current regulator. The regulator consists of a printed circuit board, auxiliary devices and potentiometers for adjustment.

Product History

Originally a Westinghouse Product

Synchronous Motor Control

Brush type synchronous field control was originally available in the 1940s. Motor starters for brushless synchronous motors have been offered since the late 1960s. Synchronous motors can be medium voltage (2300–7200V) or low voltage (600V and below). A synchronous motor starter includes the basic motor control PLUS the synchronous control and protection functions. Typically, the basic motor control and the field application control are mounted in separate compartments within the starter. Ratings of synchronous control are in terms of the maximum DC field amperes required by the motor. Current ratings are 45, 90, 135, 160, 200 or 270A DC, through 6000 hp at 5 kV.

Relay and Solid-State Type Control

Relay type Slipsyn was introduced in 1947 and uses the ASR synchronizing relay. Forms of solid-state type Slipsyn were introduced in the late 1950s and early 1960s, but were not completely solid-state and had some of the operation problems that the relay type control encountered. These were called Mark I and Mark II Static Slipsyn. In 1989, the Mark V Solid-State Slipsyn field control was introduced.

Medium Voltage (AMPGARD®) Starters

The AMI AMPGARD synchronous starter (1957–1970) used a 60-inch deep enclosure with the synchronous control in the low voltage section in the front bottom two thirds of the starter enclosure. The basic motor control was located in the rear bottom two thirds of the enclosure, barriered off from the low voltage section. The AMI AMPGARD for synchronous motors used the ASR relay type control.

The LF AMPGARD (1962–1988) primarily used the ASR field application relay control. Mark I and Mark II Static Slipsyn were also used during their availability periods. The LF AMPGARD for synchronous motors included the basic induction motor control (ISO® switch, contactor and starter control) in the bottom half of the structure.

Synchronous—Relay or Solid-State Mark V Slipsyn for Brush and Brushless Motors

The upper half contained the step-down static excitation transformer with current limiting fuses, the Silicon Controlled Rectifier (SCR) type static exciter and the synchronizing control and motor field protection panel.

The SJ AMPGARD (1982–2000) family of synchronous control is very similar to the LF AMPGARD. Until the availability of the Mark V solid-state synchronous control, the SJ used the ASR relay type field control. With the advent of the Mark V, most of the synchronous starters are supplied with this type of control. In both ASR and Mark V control schemes, the synchronous gear is usually mounted in the top half of the starter.

The SL AMPGARD (2000–present) is similar to the SJ AMPGARD but uses the Mark V solid-state synchronous controller, exclusively.

Low Voltage Synchronous Starters

Low voltage synchronous starters are similar in nature to high voltage synchronous starters except in two regards. High voltage starters, unlike low voltage starters, must isolate the low voltage from the high voltage. The components for the field control are the same.

The second difference lies in the primary disconnect used in the starters. Low voltage starters can be supplied with no short-circuit protection, with a non-fusible disconnect, a fusible disconnect switch or with a molded-case circuit breaker. Low voltage synchronous starters were manufactured in the late 1940s with the introduction of the ASR relay, until September of 1989. In 1991, the product was reintroduced using the Mark V solid-state field control.

Relay Slipsyn Automatic Field Application Panel

Product Description

Relay Field Panel

Shaded area denotes obsolete or discontinued products and services.

Automatic Field Application Control

The field application panel provides Slipsyn automatic field application identical to that in complete synchronous motor starters. It is designed for use in conjunction with a primary line closing device such as a circuit breaker or a linestarter. One interlock on the primary device is used to actuate the field application control. When the motor accelerates to proper speed for pull-in, the field is automatically applied.

The controller is available for floor mounting. Floor-mounted cabinets are NEMA 1 with hinged front door and removable rear plates.

Typical Schematic

Typical 14-100 Panel with Constant Static Exciter (Optional) for use with Primary Motor Starter

Note

① Not supplied with 14-100 panel or static exciter.

Shaded area denotes obsolete or discontinued products and services.

The cabinets contain the following equipment:

- 1– Polarized slip frequency field application relay type ASR (FR) with half-wave rectifier (REC).
- 1– Time relay with contacts available for unloader circuit (2TR).
- 1– Pullout relay and transformer (PO).
- 1– Field contactor, two-pole (FC).
- 1– Damper winding protective relay (SC).
- 1– Starting and field discharge resistor when size permits; otherwise, provided for separate mounting (1RES).
- 1– DC field ammeter, panel type, semi-flush mounted (DC AMM).
- 1– DC field ammeter shunt (SH).
- 1– DC field failure protection (FLA).
- 2– Auxiliary relays (2TRX), (2MX).
- 1– Incomplete sequence relay (IS).

Static Excitation Power Supply Panel

Constant Potential Type

Power conversion AC to DC units are designed for individual synchronous motor field excitation.

These units are convection cooled, solid-state and are completely assembled and wired as a self-contained package with a relay Slipsyn automatic field application control. The connections necessary to the external circuits are line leads, motor leads, field connections and control interconnection.

The static system consists of a convection-cooled silicon rectifier three-phase full-wave bridge assembly, a set of current limiting fuses in the secondary side of the transformer and a set of surge protecting devices. The transformer has secondary taps that are adjustable with four course taps that provide approximately 12% adjustment per tap, and three fine taps that provide 4% adjustment per tap.

Adjustable Potential Type

An adjustable potential exciter is similar to the constant potential exciter except that it uses SCRs and the voltage adjustment is made with a potentiometer mounted on the door.

Technology Upgrades

For Brush-Type, Relay-Panel Slipsyn (Class 14-100) Upgrades

New synchronous field controllers using the latest solid-state technology are usually available. Upgrades for primary starter and contactor components may also be available.

Information Required from Customer for Upgrade Evaluation

1. Original assembly nameplate data including general order "GO" number as well as any drawing numbers.
2. Complete motor data including horsepower, phase, voltage/Hz, RPM, FLA, LRA, full-load DC amperes, power factor, excitation voltage, induced field amperes at 95% speed and at 0% speed, recommended discharge resistor ohms and maximum time at zero speed (locked rotor).
3. Excitation control detail such as "constant-potential" or "adjustable-potential." Adjustable-potential usually requires a field rheostat (motor field-resistor).
4. Detail on the motor's function such as the application data and other service conditions such as duty-cycle, etc.

Slipsyn Automatic Field Application Panel with Static Exciter

Product Description

Mark V Field Controller

Automatic Field Application Control

The Slipsyn panel provides automatic field application identical to that in complete synchronous motor starters. It is designed for use in conjunction with a primary line closing device, such as a circuit breaker or a linestarter. When the motor accelerates to proper speed for pull-in, the field is automatically applied.

The solid-state Mark V Slipsyn controller will provide the following protective functions:

- A. Locked rotor protection.
- B. Incomplete sequence.
- C. Failure to synchronize.
- D. Fuse failure (Mark V).
- E. Pullout protection.
- F. DC current failure protection.

Also the application of the DC power to the motor field windings is accomplished without mechanically moving parts, and the device features a “soft-turn-on” circuit when applying DC voltage to the motor field.

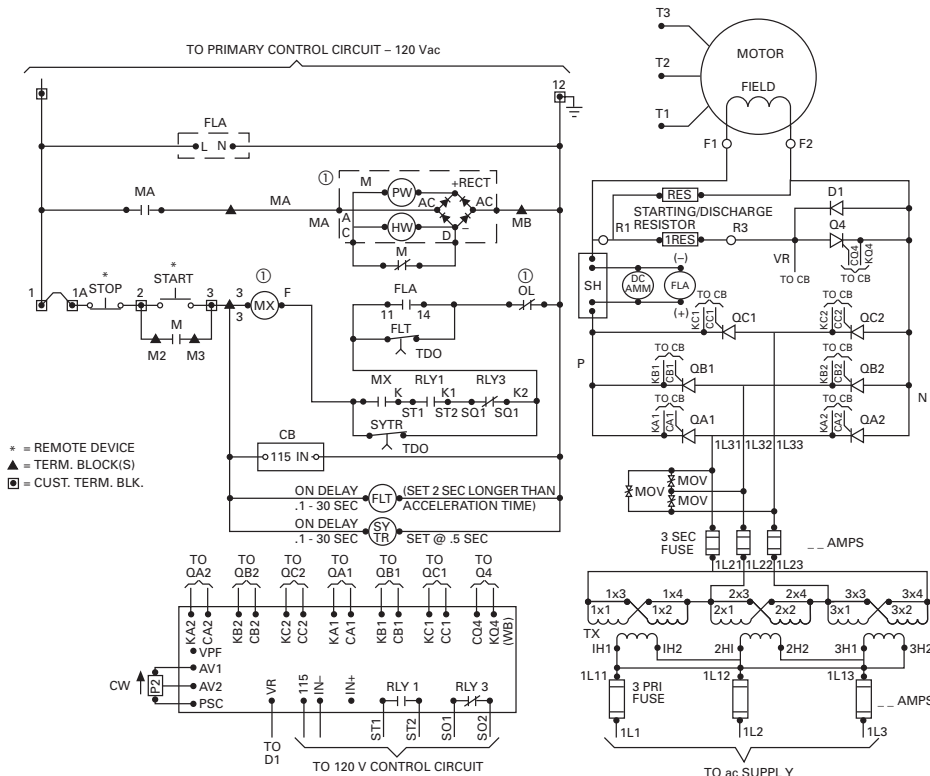

Depending on the size of the solid-state application panel, the controller is available in a NEMA 1 floor-mounted enclosure or an AMPGARD type cell construction.

In both designs, a hinged front door with externally ventilated heat sinks will be provided.

The cabinets will contain the following equipment:

- 1 – Step-down exciter transformer—three-phase (TX).
- 3 – Primary fuses (3 PRI).
- 3 – Secondary fuses (3 SEC).
- 1 – “SCR” power supply panel.
- 1 – Synchronous control board (CB).
- 1 – DC ammeter—panel type (DC AMM).
- 3 – “MOV” for surge protection (MOV).
- 1 – Starting and field discharge resistor (when size permits; otherwise provided for separate mounting).
- 1 – Field failure relay (FLA).
- 1 – Incomplete SEQ Timer (FLT).
- 1 – Start timer (SYTR).
- 1 – Potentiometer (P2).

Synchronous—Brush Type Mark V Solid-State Slipsyn Class 14-200 LV Motor Starter

600V, NEMA Size 8, Synchronous Starter

Product Description

Slipsyn magnetic starters provide reliable, automatic starting of synchronous motors. Automatic synchronization is provided by the Mark V Solid-State Field Panel, which ensures application of the field at proper motor speed, and at a favorable angular position of stator and rotor poles. As a result, line disturbance resulting from synchronization is reduced and effective motor pull-in torque is increased. Application of DC power to motor field windings is accomplished without mechanically moving parts, and the device features a “soft-turn on” circuit when applying DC voltage to the motor field.

The solid-state Mark V Slipsyn controller will provide the following protective functions:

- A. Locked rotor protection.
- B. Incomplete sequence.
- C. Failure to synchronize.
- D. Fuse failure (Mark V).
- E. Pullout protection.
- F. DC current failure protection.

The cabinet will contain the following:

- 1 – Primary starter full voltage or reduced voltage.
- 1 – Ammeter shunt (when required).
- 1 – Auxiliary relay for main line contactor (when required) (MX).
- 1 – Starting and field discharge resistor (IRES).
- 1 – Current transformer for AC ammeter through NEMA Size 4; Sizes 5 and larger use three current transformers for overload relays and AC ammeter.
- 1 – Set control circuit terminal blocks.
- 3 – Type AN manual reset thermal overload relay and three heater elements (OL).
- 1 – Step-down exciter transformer—three-phase (TX).
- 3 – Primary fuses (3 PRI).
- 3 – Secondary fuses (3 SEC).
- 1 – SCR power supply panel.
- 1 – Synchronous control board (CB).
- 3 – MOV for surge protection (MOV).
- 1 – Starting and field discharge resistor (when size permits; otherwise provided for separate mounting).
- 1 – AC ammeter, panel type (AM).
- 1 – DC ammeter, panel type (DC AMM).
- 1 – Exciter field potentiometer (P2).
- 1 – Field failure relay (FLA).
- 1 – Incomplete SEQ Timer (FLT).
- 1 – Start timer (SYTR).

Typical Schematic Full Voltage Starter, Class 14-200, Non-Combination Type

Technology Upgrades

For Brush-Type Mark V Solid-State Slipsyn (Class 14-200) Low Voltage Motor Starter Upgrades

New synchronous field controllers using the latest solid-state technology are usually available. Replacements and upgrades for primary starter and contactor components are also usually available.

Information Required from Customer for Upgrade Evaluation

1. Original assembly nameplate data including General Order “GO” number as well as any drawing numbers.
2. Complete motor data including horsepower, phase, voltage/Hz, RPM, FLA, LRA, full-load DC amperes, power factor, excitation voltage, induced field amperes at 95% speed and at 0% speed, recommended discharge resistor ohms and maximum time at zero speed (locked rotor).

Relay Slipsyn Automatic Field Application Panel

Brushless Field Panel

Product Description

This field application panel provides DC power to the exciter field and is designed for use in conjunction with a primary line closing device such as a contactor motor starter or a circuit breaker motor starter. A normally open electrical interlock on the primary device is used to actuate the field application control. This panel utilizes electromechanical devices to apply DC power to the motor exciter field circuit.

Note: The power rectifiers for the motor field circuit and automatic synchronizer are mounted on the synchronous motor rotor.

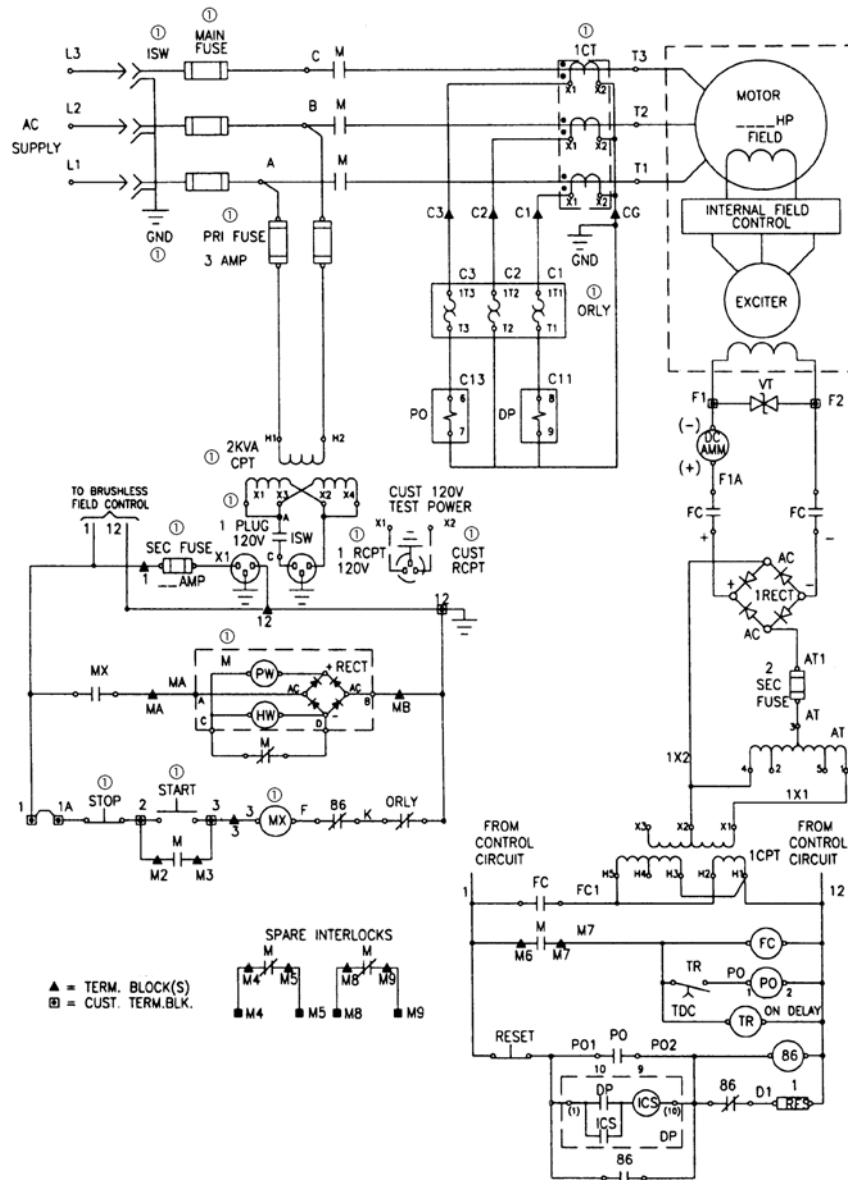

Brushless Synchronous Control

The controller can be supplied with or without enclosure. Panel mounted or open cell are suitable for mounting within other larger enclosures.

The cabinet or open panel or open cell contains the following equipment:

- 1 – Solar transformer (1 CPT).
- 1 – Power factor relay (PO).
- 1 – Auto-transformer (AT) Powerstat.
- 1 – Damper winding protection relay (DP).
- 1 – Field contactor (FC).
- 1 – Volt trap (VT).
- 1 – Rectifier (REC).
- 1 – Sequence relay (TR).
- 1 – Damper winding protection hold-in relay (DPX)—if required.
- 2 – Fuses (SEC FU), (2 SEC FU).
- 1 – DC ammeter—panel type (DC AMM).

Typical Starter Schematic

Notes

- ① Starter devices not supplied with field panel.
- Devices shown without a a constitute 14-100 panel.

Replacement Capabilities—Typical Components

4. Detail on the motor's function such as the application data and other service conditions such as duty-cycle, etc.

Synchronous—Brushless Type Mark V Solid-State Slipsyn Class 14-100 Panel

Slipsyn Automatic Field Application Panel with Static Exciter

Product Description

Automatic Field Application Control

The field application panel provides Slipsyn automatic field application identical to that in complete synchronous motor starters. It is designed for use in conjunction with a primary line closing device such as a circuit breaker or a linestarter. Automatic synchronization is provided by the Mark V solid-state field panel, which ensures application of the field at proper motor speed and at a favorable angular position of stator and rotor poles. As a result, line disturbance resulting from synchronization is reduced and effective motor pull-in torque is increased. Application of DC power to motor field windings is accomplished without mechanically moving parts, and the device features a "soft-turn-on" circuit when applying DC field voltage to the motor field.

This unit also comes standard with a VAR or power factor, DC field current regulator. The VAR regulator controls the AC reactive current flow out of the motor during varying load conditions by varying the motor field excitation. The PF regulator controls the motor power factor under varying load conditions by varying the motor field excitation. The DC field current regulator compensates for the motor field resistance as the motor field heats up by increasing the motor field voltage.

Note: Power factor regulation—cannot provide regulation below 50% of rated voltage and/or 25% of rated current. Regulation cannot be accomplished on light loads, i.e., less than 20% load.

Mark V Brushless Field Controller

The solid-state Mark V Slipsyn controller will provide the following protective functions:

- A. Locked rotor protection.
- B. Incomplete sequence.
- C. Failure to synchronize.
- D. Fuse failure (Mark V).
- E. Pullout protection.
- F. DC current failure protection.

This control is available in a NEMA 1 floor-mounted enclosure or an AMPGARD type cell construction. In both designs, a hinged front door with externally ventilated heat sinks will be provided.

The cabinets will contain the following equipment:

- 1 – Step-down exciter transformer—three-phase (TX).
- 3 – Primary fuses (3 PRI).
- 3 – Secondary fuses (3 SEC).
- 1 – SCR power supply panel.
- 1 – Synchronous control board (CB).
- 3 – MOV for surge protection (MOV).
- 1 – AC ammeter, panel type (AM).
- 1 – DC ammeter, panel type (DC AMM).
- 4 – Potentiometer (P2, P3, P4, P5).

- 1 – Field failure relay (FLA).
- 1 – Incomplete SEQ Timer (FLT).
- 1 – Start timer (SYTR).
- 1 – MP-3000 without RTD module.
- 1 – DP-4000.
- 1 – VAR/PF/DC field current board (CB1).
- 1 – Auto/manual selector switch (SSI).
- 1 – Timer (AUTO).
- 1 – Pullout relay (PO).

Approximate Dimensions in Inches

Open Cell			Floor Mounted—NEMA 1		
Height	Width	Depth	Height	Width	Depth
45	36	30	90	36	30

Technology Upgrades

For Brushless-Type Mark V Solid-State Slipsyn (Class 14-100) Upgrades

New synchronous field controllers using the latest solid-state technology are available. Replacements and upgrades for primary starter and contactor components are also available.

Information Required from Customer for Upgrade Evaluation

1. Original assembly nameplate data including general order "GO" number as well as any drawing numbers.
2. Complete motor data including horsepower, phase, voltage/Hz, RPM, FLA, LRA, full-load DC amperes, power factor, excitation voltage, induced field amperes at 95% speed and at 0% speed, and maximum time at zero speed (locked rotor).
3. Excitation control detail such as "constant-potential" or "adjustable-potential." Adjustable-potential usually requires a field rheostat (motor field-resistor).
4. Detail on the motor's function such as the application data and other service conditions such as duty-cycle, etc.

Identifying Renewal Parts

Renewal parts data for the entire history of synchronous control is contained in RPD 8855S, which provides the proper identification of standard parts that may be required under normal operation:

1. Identify the design of synchronous control (Relay, Mark I, Mark II or Mark V Slipsyn) from the synchronous panel nameplate.
2. Now that you have identified the type of the synchronous control, determine from the photographs in RPD 8855S which parts are required and identify them by style number.
3. Because many starters are supplied to meet specific customer requirements, other parts not shown in RPD 8855S might occasionally be needed. Price and availability of parts not listed may be obtained by providing a complete description of the part, along with the complete data on the starter nameplate, which is found in the low voltage area. Be sure to include the following: ratings, shop order and diagram reference.

AMPGARD

Originally a Westinghouse Product

AMPGARD Motor Control Assembly

(AMI Vintage), 5000V 200A, 2500V 200A, 2500/5000V 400A (LF-Air Vintage)

Product Description

A medium voltage starter is an assembly used to control and protect an alternating current (AC) electric motor rated at 2300, 4160 or 7200V. The controlling function is provided by a magnetically held contactor. The overload protection is provided by an overload relay of some type, and the short-circuit protection is provided by a non-load break fused disconnect switch. 400A starters are typically mounted two-high in a 90-inch high enclosure. 800A starters are mounted one-high.

Product History

The AMPGARD starter line originated in the early 1940s and has undergone two major design changes and one major evolution.

Prior to the introduction of the AMI, the AMPGARD was simply a fused motor starter in a cabinet with no disconnect switch. It was built in the early 1940s through the 1950s. There was no standard design.

The AMI AMPGARD (1950s through 1960s) was a standardized design. The AMI was one starter per structure designed to cover all ratings and incorporated a disconnect switch (ISO-Switch) in the upper compartment and either an air or oil contactor in the bottom compartment.

In the mid 1960s, a full line of starters was introduced, tailored to the horsepower requirement of the motor and using the LF air contactor. The starter incorporated the ISO-Switch and power fuses into the same cell as the air contactor. Starters were one-, two- or three-high per structure, depending on the rating required. The ratings of the LF AMPGARD were 200, 400 and 700A.

Cutler-Hammer manufactured MV motor control from 1966–1976. It was Bulletin 9950 Series, stacked two-high, with no specific trade name (such as AMPGARD).

The manufacturing facility moved from Buffalo, NY, to Asheville, NC, in 1978.

In the 1980s with the advent of vacuum technology, the LF air contactor design was discontinued. The SJ vacuum contactor was matched with a fused isolation switch. Now two current ratings are offered — 400 amperes, one- or two- high, and 800 amperes, one-high. Starters are sized per the motor horsepower and full load amperes.

AMI AMPGARD

Originally a Westinghouse Product

AMI AMPGARD Starter

Product Description

The AMI design AMPGARD starter introduced in 1957 was a complete line of starters for magnetic control of squirrel cage, wound rotor and synchronous motors. The AMI was the first front-accessible starter and was available with air break (Type H) or oil immersed (Type K) contactors. The standard AMI for full voltage starting was 30 inches deep, 38 inches wide and 90 inches high. All components were accessible from the front through three doors that opened into separate compartments. The top compartment enclosed the isolating switch and current limiting power fuses. The middle compartment enclosed the AC low voltage control panel and behind it the CTs. The bottom compartment housed the contactor.

Note: The pre-AMI design was a rear-access assembly with two compartments—current limiting fuses on the top and the contactor below.

Ratings (Maximum)

400A 1500 hp at 2500V;
2500 hp at 5000V.

Chronology

The AMI design AMPGARD was manufactured from 1957 until 1970 at the General Control Division in Buffalo, NY, and Westinghouse Manufacturing and Repair (M&R) facilities around the country. The air contactor was available through 1966. The oil contactor was available through 1970.

Replacement Capabilities

The AMI vintage is obsolete but upgrading to the latest vacuum technology with a cell-retrofill solution is available. See Technology Upgrades for further information.

Add-On Structure

New add-on vacuum structures as an extension to the AMI type structure may be connected directly to the main bus without a transition section using special bus links. Contact your local Eaton Field Sales office.

Technology Upgrades

Standard AMI 36-Inch Wide Vacuum Starter Cell-Retrofill

This kit includes a standard full-voltage non-reversing vacuum starter in a welded cell assembly with horizontal top barriers and deep flanged doors. Optional components include a new electronic motor protection relay MP-3000 and electronic meter DP-4000. It will retrofit the AMI designs that are at least 36 inches wide and 30 inches deep. The cell is 45 inches high.

Narrow AMI 30-Inch Wide Vacuum Starter Cell-Retrofill

This kit includes a standard full-voltage non-reversing vacuum starter in a welded cell assembly with horizontal top barriers and deep flanged doors. Optional components include a new electronic motor protection relay MP-3000 and electronic meter DP-4000. It will retrofit the AMI designs that are at least 30 inches wide and 30 inches deep. The cell is 58 inches high.

Note

① Upper filler cover may require field modification.

LF Air AMPGARD

Originally a Westinghouse Product

The LF Air-Break Design AMPGARD Starter

Product Description

The LF air-break design AMPGARD starter was introduced in 1962. The LF design introduced the component-to-component circuitry concept. This design greatly reduced the current-carrying connections and allowed for significant space savings.

The 25L2 and 50L2 floor-mounted NEMA 1 structures were 26 inches wide x 30 inches deep x 90 inches high. The 25L2 came in 1, 2 or 3 starters per structure. The 50L2 came in 1 or 2 starters per structure.

The 25L4 and 50L4 floor-mounted NEMA 1 starters were 36 inches wide x 30 inches deep x 90 inches high. These 400A starters could have been mounted two-high per structure.

The 25L7 and 50L7 floor-mounted NEMA 1 starters were 40 inches wide x 30 inches deep x 90 inches high. These 700A starters were mounted one per vertical structure.

Ratings (Maximum)

200, 400 and 700A 2500 hp at 2500V; 4500 hp at 5000V.

Chronology

The LF air-break design starter was introduced in 1962, first with the 2500V, 200A starter, then with the 5000V design and the 400 and 700A ratings. The starters were built in Buffalo, NY, until the operation was transferred to Asheville, NC, in 1978, where it was discontinued in the late 1980s.

Replacement Capabilities

Renewal and Replacement Parts for LF Design Starters

Refer to RPD 8855A for identifying the parts needed. Among the parts available are:

- Current and potential transformers
- Control transformers
- Fuses
- O/L relays and heaters
- Isolation switches
- Some air-break contactor parts

Technology Upgrades

Add-On Vacuum Starter Structures

New add-on vacuum structures as an extension to the LF type starter assembly may be connected directly to the main bus without a transition section.

50L4 (400A) Vacuum Replacement Contactor

For replacing an existing 400A LF air contactor with the directly interchangeable 400A vacuum contactor.

50L4 Vacuum Replacement (Front)

50L4 Vacuum Replacement (Rear)

25L2 Vacuum Replacement Contactor

25L2 Vacuum Replacement—Front View

25L2 Vacuum Replacement—Rear View

This solution uses the latest technology “SL” contactor and is designed to replace vintage 25L2, 2500V, 200A, 1962 air-break contactors.

50L2 Air-to-Vacuum Retrofit Kit

This kit replaces the out-of-production 5000V, 200A air-break contactor with an SJ vacuum contactor, for starters built after 1974 with ISO-Switch shutter mechanism mounted in the cell. The customer keeps the existing starter cell and isolation switch and modifies the cell to accept the SJ contactor that is mechanically interlocked with the isolation switch. The rating remains 200A.

50L2 Air-to-Vacuum Retrofit Kit

200A maximum	2147A95G30

Ampacity upgrade to 320A design for pre-1974 50L2 retrofit kits available.

Metering and Protective Relay Upgrades

IQ Floor-Mounted Enclosure

IQ Floor-Mounted Enclosure

This kit is for mounting IQ family products. Includes standard AMPGARD structure construction to be used as a lineup extension. Each 90-inch high x 30-inch deep section comes with two doors, each with a works-in-a-drawer drawout panel. Each door has a maximum of three standard IQ cutouts with device panels. Supplied with or without IQ and PB devices. (Photo left shows two auxiliary sections with optional bus enclosure, IQ and PB devices.)

IQ Floor-Mounted Upgrade

Description	Style Number
Auxiliary section with cutouts only. 10-inch wide x 30-inch deep x 90-inch high (does not include bus enclosure, IQ or PB devices)	2147A95G35

MP-3000 and DP-4000 upgrades used for upgrading overload-relay technology from “Type-A,” IQ 2000A, IQ 2000B or IQ 1000II to the latest technology. Also upgrades with a new, slideout, LV control panel.

The kit includes:

- Typical starter schematic
- 0.50-inch deep, flange LV door with three cut-outs for new devices
- Works-in-a-drawer slide-out panel for LV control devices

Classic AMPGARD

SL and SJ Vacuum AMPGARD

Originally a Westinghouse Product

SJ Vacuum AMPGARD Assembly

Product Description

The SJ vacuum contactor was designed and engineered specifically for use in AMPGARD starters. The contactor is a low-chop design that permits application matching of the starter to the motor for 2200–7200V and ratings of 400 and 800A. The 400A contactor is available in both slide-out and roll-out configurations. The 800A contactor is available in the roll-out design only. The SJ AMPGARD is a horsepower specific starter design that uses the component-to-component circuitry concept. The full-voltage 400A rating in a NEMA 1 enclosure is 36 inches wide x 30 inches deep x 90 inches high. These 400A starters are mounted one- or two-high per structure. The 800A rating in an enclosure is 40 inches wide x 30 inches deep x 90 inches high in a one-high construction for a full-voltage starter.

Ratings (Maximum)

400 and 800A, 3000 hp at 2500V; 5500 hp at 5000V; 8000 hp at 7200V.

Chronology

The SJ vacuum design AMPGARD starter was introduced in 1982 with the 400A rating. The 800A rating followed in 1987. With the introduction of the vacuum contactor, the air-break starter has been gradually phased out and is rarely specified in an assembly. The starters are built in Asheville, NC.

AMPGARD assemblies were made available with the new SL Contactor in late 1999. Except for the 400A frame contactor, SJ and SL AMPGARD assemblies are virtually identical.

Replacement Capabilities

Renewal and Replacement Parts for SJ Design Starters

Refer to RP.48J.01.T.E for identifying the parts needed.

Common Replacement Parts for SL Design Starters

Refer to RP02003002E for identifying the parts needed.

Add-On Vacuum Starter Structures

New add-on vacuum structures as an extension to the SJ type structure may be connected directly to the main bus without a transition section. Contact your local Eaton Field Sales office.

Replacement Vacuum Contactors

New replacement vacuum break contactors are available for all SJ model ratings.

Next Generation AMPGARD

SLB and SLS Contactors AMPGARD

*Next Generation AMPGARD Lineup—
Front View*

Product Description

Medium voltage control reaches a higher level of design with the next generation of Cutler-Hammer AMPGARD starters from Eaton. This product incorporates 60 years of experience with over 75,000 units installed worldwide. The SLB and SLS contactor is a low-chop design that controls 200–8000 hp motors with ratings of 400 and 800A vacuum contactors. The contactor is available in a stab (SLS) or bolted (SLB) design within the starter cell. The two-high structure design can accommodate two 400A or one 800A contactor/starter designs. The two-high structure is 36 W x 92 H x 30 D inches (914.4 x 2336.8 x 762.0 mm), which includes a 12-inch high top-mounted main bus compartment.

Ratings (Maximum)

400 and 800A 3000 hp at 2500V; 5500 hp at 5000V; 8000 hp at 7200V.

Chronology

The SLB and SLS vacuum design AMPGARD starter was introduced in 2005 with both 400 and 800A ratings to be incorporated into the next generation of AMPGARD assembly. The starters are built in Asheville, NC. The new SLS and SLB contactors will not be interchangeable with the existing SJ or SL contactors.

Replacement Capabilities

For further information, contact the Asheville plant at **1-800-523-3775**.

SL and SJ Vacuum AMPGARD Starters (Medium Voltage)

AMPGARD IT. Soft Start Components

The Cutler-Hammer AMPGARD **IT**. Soft Start components are now available for upgrading existing full-voltage and reduced-voltage starters. The requirements to convert starters into AMPGARD **IT**. Soft Start will depend on specific configurations of the existing starter. Space will be required for two 36-inch wide, 45-inch high cells that are ideally mounted in the same vertical structure. The upper compartment contains the 'M' Contactor Cell and the lower compartment contains the SCR Truck Cell. The new door provided with the SCR Truck Cell includes the MV801 control module and is made to interlock with the door on the upper compartment.

If the targeted upgrade is for a FVNR AMPGARD starter presently located in the upper compartment, then the conversion is simplified by using the existing FVNR starter as the 'M' contactor cell and converting the bottom compartment into the SCR truck cell. The 'M' contactor load terminals are connected to the SCR truck cell terminals using three copper bus connectors. Available SCR truck ratings include 200A and 400A. See **Page V12-T13-98** for a description of other existing starter configurations. The advanced diagnostics included in the MV801 control module include:

- Phase loss
- Phase imbalance
- Jam
- Stall
- Over/undervoltage
- Motor overload

F2100

Product Description

Nearly 50 years ago, Eaton's electrical business and Westinghouse® introduced the low voltage motor control center (MCC) assembly, enabling the group mounting of low voltage (600V class) electrical controls. This allowed for supervision and safe operation of motor starter units, feeder tap units and auxiliary equipment in a flexible structure arrangement at a centralized location.

The foundation for today's MCCs is a modular plug-in combination motor controller

assembly with components of proven electrical and mechanical integrity. These assemblies are enclosed in metal structures that prevent accidental contact with live electrical parts.

Eaton's Cutler-Hammer® MCC structure consists of structural steel, horizontal and vertical wireways for conduit and load cable entry and exit, and vertical and horizontal bus systems for distributing power throughout the MCC. The starter unit consists of a rugged steel shell (wrapper) for mounting the unit components, a combination motor starter with factory wired control, a handle mechanism for ON/OFF operation and a rigid unit door.

Product History

Group-mounted motor control was originally developed by Westinghouse in 1935. What came to be known as motor control centers were built in 14 manufacturing and repair shops around the country, including a plant in Chicago, IL, that opened in 1941. In 1963, Chicago became the primary MCC manufacturing plant. The Fayetteville, NC, operation was opened in 1980 to relieve some of Chicago's volume. The Fayetteville plant was expanded in 1984 and the Chicago operation was closed. Motor control centers

are currently manufactured in Fayetteville and in eight service centers around the country.

The Westinghouse plug-in starter design for group-mounted control (called motor control centers) was first introduced in 1935, and in 1950 became known as the Type 11-300 motor control center and used the 11-200 motor starter. The Type W MCC replaced the 11-300 in 1965, first using the 11-200 starter and then moving to the A200 starter. The 5 Star was introduced in 1975 to replace the Type W. It, too, used the A200 motor starter. The Series 2100 updated the 5 Star design in 1987, but is mechanically compatible with the 5 Star. The Advantage MCC was introduced as a sister product to the Series 2100 in 1992 with the introduction of the Advantage starter. It was also mechanically compatible with the 5 Star. With the merger of Eaton's electrical Cutler-Hammer business unit and Westinghouse's Distribution and Control Business Unit (DCBU) in 1994, a new hybrid motor control center line was introduced. It was called the F2100 MCC and featured the Freedom™ starter.

The Cutler-Hammer plug-in starter design motor control center was introduced in the late 1950s as the 9800 Series

Unitrol. These motor control centers used the 3-Star type motor starter. In 1968, the Citation line of starters replaced the 3-Star type in the 9800 MCC. The motor control center was totally redesigned around the Citation starter in 1972 and was called the F10 Unitrol. The next generation of MCC was introduced in 1988, using the Freedom line of starters called the Freedom Unitrol. Freedom Unitrol was discontinued in 1994 and replaced with the Cutler-Hammer F2100 motor control center.

Cutler-Hammer motor control centers were originally built in Milwaukee, WI. In 1962, manufacturing moved out of Milwaukee to plants in Atlanta, GA; Bethlehem, PA; Chicago, IL; Los Angeles, CA; Dallas, TX; San Francisco, CA; and Cleveland, TN. In 1972, these plants consolidated to Atlanta, Bethlehem, Chicago, Dallas and Los Angeles. In 1984, another consolidation left manufacturing in only Atlanta and Los Angeles. With the introduction of the Freedom starter in 1989, all manufacturing was moved to Atlanta. After the merger, all motor control center manufacturing moved to the Fayetteville, NC, location.

IT-EM Handles

Freedom Unitrol

F10 Unitrol Slider

9800 Unitrol (Obsolete)

11-300

Type W

11-300

Originally a Westinghouse Product

Unit with A200 Starter

Product Description

Introduced in 1937, Westinghouse manufactured the 11-300 MCC through 1965 and it was available as match and lineup until 1974. It used standard structures each 20.00 inches wide, 90.38 inches high, and either 20.25 inches or 12.00 inches deep for front mounted and 20.25 inches for back-to-back mounting. Vertical sections could be bolted together to form a single lineup with continuous horizontal bus and open horizontal wireways.

Unit height was measured in either 9.33-inch or 14.00-inch increments up to a maximum of 70.00 inches of usable vertical space. ANSI 61 light gray enamel was used on all structural parts. The unit door hinged on the right and covered the entire width of the structure.

The 11-300 starter unit was most easily recognized by the rotary type of handle mechanism. Bus and support systems were typically braced to withstand fault currents of 25,000A.

Maximum Ratings

Three-phase, 600V, 600 hp, 2500A bus.

20.00-Inch Wide/Single 11-300 MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL® labeled
- Series C disconnect device
- A200 standard—*IT*, Freedom or Advantage starter optional
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with IT-EM Starter

Add-on MCCs

New *IT*, F2100 or Advantage can be added to an existing lineup. **Cable connected only.**

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers and fusible switches through 400A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

11-300 Dual Feeder

9800

Originally a Cutler-Hammer Product

Unit with Citation Starter

Product Description

Introduced in 1956, the Cutler-Hammer 9800 was the initial offering in the motor control center product grouping. The door of the unit measured 19.38 inches wide and the bucket width measured 16.13 inches. Unit height was measured in 9.33-inch and 14.00-inch increments. The MCC did not use a wireway.

ANSI 49 was applied to the units, structural framework, roof, side sheets and all exterior doors.

9800 starter units were originally supplied with a 3-Star starter and a rotary handle mechanism. Replacements today use the newer Freedom starter, and a slider handle mechanism and a new door. The rotary handle mechanism is no longer available. Bus and bus systems were typically braced to withstand fault currents of 25,000A.

Maximum Ratings

Three-phase, 600V, 100 hp, 2500A bus.

20.00-Inch Wide/Single 9800 MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Sizes 1–4 starter units
- UL labeled
- Series C disconnect device
- Freedom standard—**IT**, A200 or Advantage starter optional
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with IT-EM Starter

Note: Replacement 9800 units will be supplied with slider handle mechanism as shown.

Add-on MCCs

New **IT**, F2100 or Advantage can be added to an existing lineup. **Cable connected only.**

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers and fusible switches through 400A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

9800 Feeder Unit

Note: Handle mechanism pictured above is also used with F10 Unitrol units.

Type W

Originally a Westinghouse Product

Unit with A200 Starter

Product Description

Manufactured from 1965 to 1975, this Westinghouse MCC used standard structures each 19.00 inches wide, 90.00 inches high, and either 15.00 inches or 20.00 inches deep for front mounted or 20.00 inches deep for back-to-back mounting. Vertical sections were bolted together forming a single lineup with continuous horizontal bus. Unit height is measured in 6.00-inch increments up to a maximum of 72.00 inches of usable vertical space. Starter units are 13.50 inches wide.

A two-tone light/dark enamel paint system was used with an ANSI 70 off-white applied to the structural framework and cover plates. A dark gray was used for unit and wireway doors.

The Type W starter units are easily recognized by their sliding handle mechanism, the MC motor control type. Bus and bus support systems were typically braced to withstand fault currents of 22,000A.

Maximum Ratings

Three-phase, 600V, 400 hp, 2500A bus.

20.00-Inch Wide Type W MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL labeled
- Series C disconnect device
- A200 standard—*IT*, Freedom or Advantage starter optional
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with IT-EM Starter

Add-on MCCs

New *IT*, F2100 or Advantage MCCs can be added to an existing lineup through a 10.00-inch bus transition section.

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers and fusible switches through 400A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Type W Dual Feeder

F10

**Originally a
Cutler-Hammer Product**

Unit with Citation Starter

Product Description

Introduced in 1972, this Cutler-Hammer MCC was available in both 16.00 inches wide (with wireway) and 20.00 inches wide (without wireway). Bucket width is 14.00 inches and replacement units are available with both designs. Unit height is measured in 6.00-inch increments.

ANSI 40 was applied to the units, structural framework, roof, side sheets and all exterior doors.

The F10 MCC used the Citation starter and was identified by the slider type handle mechanism. Bus and bus support systems were typically braced to withstand fault currents of 42,000A.

Maximum Ratings

Three-phase, 600V, 150 hp, 2000A bus.

20.00-Inch Wide F10 MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL labeled
- Series C disconnect device
- Freedom standard—*IT*, A200 or Advantage starter optional
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with Advantage Starter

Add-on MCCs

New *IT*, F2100 or Advantage MCCs can be added to an existing lineup through a bus splice kit and channel sills.

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers 600A and fusible switches 400A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

F10 Feeder Unit

Freedom Unitrol

*Originally a
Cutler-Hammer Product*

Unit with Freedom Starter

Product Description

Introduced in 1989, this Cutler-Hammer MCC had vertical structures that measured 20.00 inches wide, 91.50 inches high, and either 15.00 inches or 20.00 inches deep. It allowed a 6.00-inch Size 1 unit design.

ANSI 49 was applied to the units, structural framework, roof, side sheets and all exterior doors.

The Freedom Unitrol used the Freedom starter and was identified by the slider type handle mechanism. Bus and bus support systems were typically braced to withstand fault currents of 42,000A with the option to increase to 65,000A.

Maximum Ratings

Three-phase, 600V, 400 hp, 2500A bus.

*20.00-Inch Wide Freedom
Unitrol MCC Structure*

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL labeled
- Series C disconnect device

- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Freedom Unitrol Feeder Unit

5 Star/Series 2100

Originally a Westinghouse Product

Unit with A200 Starter

Product Description

The 5 Star MCC was introduced by Westinghouse in 1975. The structure design was the basis for the Series 2100, Advantage and F2100 products later. The Series 2100 updated the 5 Star design in 1987 with higher ratings and newer components.

The vertical structures are normally 20.00 inches wide, 90.00 inches high, and 16.00 inches or 21.00 inches deep. Vertical sections may be bolted together forming a single lineup with continuous horizontal bus and open horizontal wireways. Unit height is measured in 6.00-inch increments up to a maximum of 72.00 inches of usable vertical space.

A two-tone light/dark enamel paint system is used for this design. ANSI 61 gray is applied to the roof and side sheets and all exterior doors. Starter units are 13.75 inches wide.

The 5 Star/Series 2100 starter unit's handle mechanism is a gray toggle type handle with a black exterior mounting panel and is used on the Advantage and F2100 designs. Bus and bus support systems are typically braced to withstand fault currents of 42,000A on the 5 Star and 65,000A on the Series 2100.

Maximum Ratings

Three-phase, 600V, 600 hp, 2500A bus.

20.00-Inch Wide 5-Star MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL labeled
- Series C disconnect device
- A200 starter standard—*IT*, starter optional
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with A200 Starter

Add-on MCCs

New *IT*, F2100 or Advantage MCCs can be added to an existing lineup through a bus splice kit.

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers and fusible switches through 600A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

5 Star/Series 2100 Feeder Unit

Advantage

Originally a Westinghouse Product

Unit with Advantage Starter

Product Description

Introduced in 1991 as a sister to the Westinghouse Series 2100 MCC, the Advantage starter design revolutionized the industry. It uses state-of-the-art technology to solve motor control application problems, such as coil burnout and contact chatter/welding.

The vertical structures are normally 20.00 inches wide, 90.00 inches high, and 16.00 inches or 21.00 inches deep. Vertical sections may be bolted together forming a single lineup with continuous horizontal bus and open horizontal wireways. Unit height is measured in 6.00-inch increments up to a maximum of 72.00 inches of usable vertical space.

A two-tone light/dark enamel paint system is used for this design. ANSI 61 gray is applied to all exterior back sheets, side sheets and doors. Starter units are 13.75 inches wide and are interchangeable with the 5 Star and Series 2100 design.

The Advantage starter unit's handle mechanism is a gray toggle type handle with a black exterior mounting panel and is used on the 5 Star/ Series 2100 and Freedom 2100 designs. Bus and bus support systems were typically braced to withstand fault currents of 65,000A.

Maximum Ratings

Three-phase, 600V, 1100 hp, 3200A bus.

20.00-Inch Wide Advantage MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL labeled
- Series C disconnect device
- Advantage starter
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with Advantage Starter

Device Panel Upgrade

While incorporating Advantage starters, increase the information shown on the unit device panel with one or two of the Advantage control modules (ACMs) available. These units fit into the standard device panel cutout and provide pushbutton, pilot light and metering functions with reduced wiring costs.

The device panel is hinged on a horizontal rod extending across the front of the unit. With the unit door open, loosening two captive retaining screws at the top of the panel and sliding it a 0.50-inch left permits it to swing down. This provides ready access to the rear of the panel and increased accessibility to the unit interior.

Advantage Device Panel with ACM and Metering Module

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers and fusible switches through 600A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Advantage Feeder Unit

F2100

The Cutler-Hammer F2100 was introduced in 1995

Unit with Freedom Starter

Product Description

The structure is based on the 5 Star, Series 2100 and Advantage MCC design. Vertical structures are normally 20.00 inches wide, 90.00 inches high, and 16.00 inches or 21.00 inches deep. Vertical sections may be bolted together forming a single lineup with continuous horizontal bus and open horizontal wireways. Unit height is measured in 6.00-inch increments up to a maximum of 72.00 inches of usable vertical space.

A two-tone paint system is used for this design. ANSI 61 gray is applied to the exterior and doors. Starter units are 13.75 inches wide with 4.63-inch wireways.

The Freedom starter is used in this design along with the HMCP motor circuit protector.

The F2100 starter unit's handle mechanism is a gray toggle type handle with a black exterior mounting panel and is used on the Advantage and 5 Star/Series 2100 designs. Bus and bus support systems are typically braced to withstand fault currents of 65,000A.

Maximum Ratings

Three-phase, 600V, 1100 hp, 3200A bus.

20.00-Inch Wide F2100 MCC Structure

Replacement Capabilities

Replacement Starter Units

Replacement starter cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Size 1–5 starter units
- UL labeled
- Series C disconnect device
- Freedom starter standard—*IT* starter optional
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

Unit with Freedom Starter

Replacement Feeder Units

Replacement feeder cell units are available for all plug-in MCC designs. A complete unit for adding to an existing MCC includes a unit door, a divider pan and all the necessary mounting hardware. Features of the replacement unit include:

- Feeder breakers and fusible switches through 600A
- UL labeled
- Series C disconnect device
- New tin-plated copper stab assembly
- New door, handle mechanism and hardware

F2100 Feeder Unit

Replacement Capabilities

Replacement Parts

In addition to replacement units, a large number of replacement parts are available for each vintage.

Note: For information on these and additional parts, refer to RPD listed on **Page V12-T14-19** of this catalog. For parts not listed or shown in the RPD, contact your local Eaton Field Sales office or Service Center. See **Page V12-T14-19** of this catalog.

Examples

F2100 Horizontal Wireway Door

9800 Unit Mounting Hardware Kit

Freedom Unitrol Terminal Block Mounting Kit

F10 Handle Mechanism

Series 2100 Bus Splice Kit

Type W Horizontal Busbar

Technology Upgrades

IT. Soft Start

**Intelligent Technologies (IT.)
Soft Starters**

Eaton's Cutler-Hammer Intelligent Technologies (IT) solid-state starters provide high-performance motor control in the most compact packages in the industry. The IT. Series of solid-state starters are available in retrofit units through 200 hp in all Cutler-Hammer and Westinghouse MCC vintages. Each IT. solid-state starter unit includes a disconnect, starter, a DC power supply, a 120 Vac interposing relay, and a 100 VA CPT. The IT. solid-state starter design incorporates an integral, parallel run contact that engages once the starter reaches full speed. Available soft starter options include: pump control software, line/load MOV protection and motor isolation contactor.

IQ Retrofit Kits

IQ Analyzer (The Ultimate in Monitoring)

IQ Analyzer

The Cutler-Hammer IQ Analyzer displays the most comprehensive list of metered parameters in its class. The dot-matrix, gas plasma display provides the flexibility of exhibiting large characters with high visibility and small characters for detailed descriptions. Multiple parameters (e.g., currents of phases A, B and C) are displayed simultaneously for more thorough real-time monitoring. Custom screens can also be configured. Available information includes current, voltage, power, energy, demand and an extensive array of harmonic data.

IQ 320

IQ 320

The Cutler-Hammer IQ 320 is the most cost-effective metering solution for monitoring main incoming line electrical values. Through the bright two-line LCD display, the IQ 320 provides accurate readings for voltage, amperes, watts, hertz, power factor and VA. Key features of the IQ 320 include ANSI C312.16 revenue class metering accuracy, PowerNet™ capable communications port and user intuitive four-button front panel interface.

DeviceNet Interface Module Upgrade (DN65)

DeviceNet I/O Starter Unit Upgrade

Using the DN65 Discrete DeviceNet™ I/O module, all Cutler-Hammer and Westinghouse vintage MCCs may be upgraded with the latest Freedom motor starters to provide wire savings and communications capability. The DN65 DeviceNet I/O Module adds increased functionality and intelligence in a small footprint. Standard MCC starter units accommodate the DN65 DeviceNet module and provide the ability to perform START/STOP control over an open network. Additionally, contactor, overload and breaker status may be communicated through the DN65 upstream to a host PC, PLC or DCS system.

Technology Upgrades

SPD Upgrade

F2100 SPD Unit

Surge Protective Device—MCC

The Eaton SPD Series surge protective device is a hybrid MOV filter-based suppression system that protects sensitive electronic equipment from damaging transients, lightning surges and electrical line noise. The SPD is installed in parallel to the electrical circuits in a motor control center and provides clean power to the motor starting circuits. The SPD only reacts and keeps damaging surge current and high frequency noise away from motor starting circuits when the system's nominal operating voltage is exceeded. The latest Eaton SPD Series protective devices are substantially smaller, safer and more compact than their predecessors, providing better performance and easier installation.

The new Eaton SPD Series are available in size ranges from 50 to 400 kA and can be retrofitted to all Cutler-Hammer and Westinghouse vintage MCCs. Consult the factory for further information.

SV9000 Drives

SV9000 AC Drive

Cutler-Hammer SV9000 adjustable frequency drives are available for retrofit units in a number of MCC vintages. For current vintage Freedom and Advantage MCCs, SV9000 drives are available through 1100 hp at 480V. Type W, F10, Freedom Unitrol motor control center vintage units are available with SV9000 drive in plug-in configurations through 30 hp at 480V. Each retrofit unit includes an SV9000 drive (variable or constant torque) disconnect, a CPT and a 3% input and output line reactor. SV9000 drives provide the highest performance and reliability available for flexible and smooth motor control.

IT-EM Technology

In addition to standard retrofit capabilities, every vintage of MCC can be upgraded with IT-EM motor starters. Consult factory for other manufacturer's motor control centers.

5 Star/2100

Type W

F10

Series C Retrofit Kits

Series C retrofit kits are to be used to upgrade existing Type W, 5 Star and F10 motor control center buckets by changing out the old breakers with the Series C. These kits can be applied to both starter and feeder units.

The old breakers that these kits will upgrade include, but are not limited to, the MCP, F, FA, FB, HFB, K, KA, KB, HKB, L, LA, LB and HLB breakers.

5 Star Series C Retrofit Kit

5 Star Series C Retrofit Kit

The 5 Star Series C retrofit kit includes:

- Series C device, 65 kA (either HMCP or thermal-magnetic breaker)
- Operating handle mechanism, including tripped indication and push-to-trip
- Label stating that the MCC unit has been retrofitted with Series C device suitable for 65 kA (similar to UL quality label)
- Templates for desired frame size
- Assembly instructions

Note: The upgrade interrupting rating of the breaker does not upgrade the withstand rating of the existing bus.

Type W Series C Retrofit Kit

Type W Series C Retrofit Kit

The Type W Series C retrofit kit includes:

- Series C device, 65 kA (either HMCP or thermal-magnetic breaker)
- Operating handle mechanism, including tripped indication and push-to-trip
- Label stating that the MCC unit has been retrofitted with Series C device suitable for 65 kA (similar to UL quality label)
- Templates for proper hole placement for desired frame size
- Series C breaker mounting hardware
- New door and hardware
- New stab assembly
- Assembly instructions

Note: The upgrade interrupting rating of the breaker does not upgrade the withstand rating of the existing bus.

F10 Series C Retrofit Kit

F10 Series C Retrofit Kit

The F10 Series C retrofit kit includes:

- Series C device, 65 kA (either HMCP or thermal-magnetic breaker)
- Operating handle mechanism, including tripped indication push-to-trip
- Label stating that the MCC unit has been retrofitted with Series C device suitable for 65 kA (similar to UL quality label)
- Templates for desired frame size
- Assembly instructions

Note: The upgrade interrupting rating of the breaker does not upgrade the withstand rating of the existing bus.

Catalog Numbering System

Series C Retrofits

How to Order

Step 1: Select the correct Series C device from the table in the applicable RPD

- 5 Star—RP04304003E
- Type W—RP04304006E
- F10—RP04304005E

Step 2: Create a catalog number based on the MCC type, device selected, modification, door size and device panel.

Step 3: Select price from PL04304002E.

Competitive Retrofit Upgrades

GE770 Unit Retrofitted with Advantage and HMCP

The following competitive retrofit units can be obtained from the Fayetteville manufacturing plant.

- Allis-Chalmers
- Allen-Bradley®
- Arrow Hart®
- General Electric®
- Klockner-Moeller®
- Siemens®
- Other

Factory Retrofit

We replace the starter, the breaker and the handle mechanism. A new door is provided for most competitor's units. The original unit, the pan and the stabs are refurbished.

Panel Retrofit

New components are mounted on a "panel" that is easily installed into the competitor's unit. Included are a new pan, a starter, a breaker, a handle mechanism and a door if available. Requires field installation by Eaton's Electrical Services & Systems (EESS) or a qualified contractor.

Note: See **Page V12-T14-19** for most competitor retrofit units.

Note: Please consult factory for additional retrofit opportunities.

New Units

Brand new ITET 5600, GE 7700/8000 and Allen-Bradley Centerline™ replacement units include:

- New bucket
- New stabs
- All new Cutler-Hammer components
- Complete with manufacturer UL label

Note: For additional information and designs for other motor control centers, call the Aftermarket Products Center in Fayetteville, NC.

Customer Required Information

Procedure for identifying renewal parts:

1. Renewal parts listed in PL04304002E below identify those replacement parts that are most frequently ordered and that are readily available from manufacturing stock.
2. For parts not shown in *Aftermarket, Renewal Parts and Life Extension Solutions* or listed in Further Information on **Page V12-T14-19**, contact your local Eaton Field Sales office or call **1-800-OLD-UNIT**.

Assemblies and Circuit Breakers

WRI Switchboard, St. Louis Vintage with Fixed Molded-Case Breakers
Pow-R-I is of similar look)

Pow-R-M-S/F Switchboard with Fixed SPB Breakers

Distribution switchboards can be a free-standing structure(s) or close coupled as the secondary section of a power center or substation. Power distribution switchboards primarily use individually mounted, fixed or drawout devices. Service distribution switchboards primarily use main devices as individually mounted, fixed or drawout with group-mounted molded-case circuit breakers. Numerous combinations of devices can be used depending on the specification. Class III (power distribution) and Class II (service distribution) switchboards are commonly used descriptions for the class of distribution switchboards. Distribution switchboards are built in accordance with all applicable provisions of UL® 891 and NEMA® PB-2.

Product History

Distribution switchboards have been around since the 1950s. Most of the original switchboards were custom assembled with very little standardization of design.

From the mid-1970s through the 1980s, distribution boards became somewhat more

standardized and were manufactured in St. Louis, MO. These vintages included:

- WRI
- WF/WRP
- Pow-R-Gear

“WRI” used individually mounted, molded-case circuit breakers for both mains and feeders.

“WF/WRP” used group-mounted, molded-case circuit breakers or FDP fusible switches for the feeders. For the mains, this design used either DS, SPB, bolted-pressure switch (CBC-type), or MCCBs.

“Pow-R-Gear” used SPB drawout, insulated-case power circuit breakers for both mains and feeders.

Some specialty switchboards, including generator-control, were manufactured in Cincinnati, OH, until the plant was closed in 1985.

During the mid-1980s, some of the switchboard manufacturing was moved to a plant in Visalia, CA, and another plant in Sumter, SC. Those designs included WF/WRP and WRI.

During the late 1980s and early 1990s the switchboard products were relocated to two different locations:

- Asheville, NC
- Sumter, SC

The products that moved to Asheville included the “Pow-R-Gear,” which later evolved into the “Pow-R-M-S” design (the “Pow-R-M-S/F is the fixed-mounted version). Also included in the move to Asheville was the “WRI” product, which later evolved into the “Pow-R-I” design. The “Pow-R-I” design was short-lived and in 1991 it evolved into two different products—the “Pow-R-M-S/F mentioned above and the “Pow-R-Line i” mentioned in the next paragraph.

The first product that moved to Sumter, SC, was the “WF/WRP,” which evolved into the “Pow-R-Line C” design—it uses Series C® MCCBs. The second product evolved from Asheville’s “Pow-R-I” and is called the “Pow-R-Line i” design.

Product Description

Cutler-Hammer low voltage distribution switchboards from Eaton’s electrical business serve to switch power and to protect circuits in industrial and commercial distribution systems. Distribution switchboards can be classified into two categories—power distribution and service distribution. The power distribution switchboards typically use insulated-case SPB or air DS power circuit breakers as mains and individually compartmentalized feeders. The service distribution switchboards use insulated-case SPB, air DS, molded-case (all types), and fusible switches as mains and molded-case circuit breakers as feeders.

WRI Switchboard with Individually Mounted Molded-Case Breakers

Pow-R-Line *i* Switchboard with Individually Mounted Molded-Case Breakers

Product Description

This class of switchboard is commonly called a Class III switchboard. Generally speaking, this means individually mounted main and feeder devices.

The WRI switchboard that was built by Westinghouse in St. Louis, MO consisted of rear- and front-accessible enclosures with all sections flush front to rear. The WRI board was designed for mounting away from the wall.

Main devices could be DS, SPB, SCB-II or molded-case circuit breakers and (CBC) bolted pressure or FDP fusible switches. Individually mounted feeders could be either FDP fusible switches or molded-case circuit breakers. The WRI design moved to Asheville, NC, as the Pow-R-I design with little change, except fusible was not offered with Pow-R-I. Some different structural and bussing methods were used on the Pow-R-I also.

The Pow-R-I product was split in 1991. Switchboards requiring main and individually mounted feeders using SPB breakers and the RD Series C breaker were incorporated in the Pow-R-M-S/F design using the same design as the drawout Pow-R-M-S switchboard except fixed devices. The smaller current individually mounted devices were incorporated into the Pow-R-Line *i* design introduced in 1991 at Sumter, SC.

Replacement Capabilities

Parts for WRI Switchboard

New Circuit Breakers

New SPB, DS and RD molded-case circuit breakers are available for replacement provisions or to fill existing cells. All breakers are newly manufactured.

Circuit Breaker Cell Provisions

These are used to convert blank cell compartments into breaker cell compartments. Provisions are no longer available for WRI dated 1967 or earlier but might be available for newer versions. Cell provisions are no longer available for Pow-R-I and Pow-R-M-S/F (fix-mounted). Provisions are sometimes available for the Pow-R-Line *i* design. In all cases, care must be taken to properly identify the original shop order before proceeding or making final determination.

Repair Service for SPB Breakers

Factory authorized non-warranty repair for all SPB breaker frames.

Class 1 Reconditioning for DS Breakers

Repairs are available for DS circuit breakers. This service includes trip unit replacements.

Circuit Breaker Parts

An extensive inventory of newly manufactured breaker renewal parts are available for SPB, DS and RD molded-case circuit breakers.

Technology Upgrades

IQ and PowerNet™ Communications Retrofits

Cutler-Hammer IQ products replace existing analog meters, instruments and protective relays with microprocessor-based solid-state true rms sensing devices. IQ products can be furnished as components for field installation on the switchgear. The IQ products include the IQ Analyzer, IQ DP-4000, IQ 200 and IQ 300. Communications can then be tied to the Cutler-Hammer PowerNet system.

Digitrip™ Trip Unit Retrofit Kits

Trip unit retrofit kits are available for all SPB and DS breaker frames. Refer to **Tab 17, Pages V12-T17-33 to V12-T17-36.**

SPD Series Surge Protective Devices

Refer to **Page V12-T15-6** of this publication.

Pow-R-Gear, Pow-R-M-S and SPB

Pow-R-Gear Switchboard, St. Louis Vintage with Drawout SPB Breakers

Pow-R-M-S Switchboard, Current Asheville Design with Drawout SPB Breakers

Product Description

Pow-R-Gear, and now Pow-R-M-S, switchboards were/are designed exclusively for the systems Pow-R breaker line of encased power circuit breakers. These switchboards were/are designed for high current applications and include the following features: drawout breaker elements, individual breaker compartmentalization, in-gear breaker contact inspection and minimum floor space design. Both versions were/are manufactured in accordance with all applicable provisions of UL 891 and NEMA PB-2 covering low voltage distribution switchboards.

The primary differences between the original Pow-R-Gear and its successor Pow-R-M-S are: structural (frame design), trip units (Pow-R-Gear used the Pow-R-Trip 7; Pow-R-M-S uses the Digitrip RMS sensing trip family), bus design (Pow-R-Gear used aluminum of varying heights;

Pow-R-M-S uses bolted copper of full height) and vertical spacing (Pow-R-Gear accommodated six-high 800A breakers, Pow-R-M-S accommodates four-high 800A breakers).

Chronology

Pow-R-Gear was built by Westinghouse in St. Louis, MO, from 1977 to 1990. Pow-R-M-S was built by Westinghouse, and later Cutler-Hammer in Asheville, NC, from 1990 to 2003.

Replacement Capabilities

Systems Pow-R Breaker Type SPB-65 with Pow-R-Trip 7 Trip Unit

Factory Repair Service for SPB Breakers

These repair services apply to breakers that have exceeded the original factory warranty and are now referred to as non-warranty repairs. The Systems Pow-R Breaker family consists of fixed breakers, either front connected or rear connected, and drawout breakers, either behind-the-door or through-the-door design. Four-pole breakers are only available in the fixed design front or rear connected.

The Cutler-Hammer SPB factory authorized non-warranty repair service features:

- Quality SPB repair specified and audited by factory engineers according to procedures
- Only genuine new Cutler-Hammer replacement parts are used
- Original factory specifications and design drawings are used by factory trained technicians

New SPB Circuit Breakers

New SPB breakers are available for replacement or to fill existing vacant cells. All breakers are newly manufactured and are mechanically and electrically the same as the breakers originally specified and supplied.

SPB Breaker Cell Provisions

These are used to convert blank cell compartments into breaker cell compartments. Provisions are usually available for Pow-R-M-S drawout designs. However, provisions are not available for Pow-R-M-S/F fixed designs or for the Pow-R-Gear design. In all cases, care must be taken to properly identify the original shop order before proceeding or making final determination.

SPB Circuit Breaker Parts

An extensive inventory of newly manufactured breaker renewal parts is available for SPB circuit breakers.

Technology Upgrades

Pow-R-Trip 7 Trip Unit Upgrades

Pow-R-Trip 7 was the solid-state trip unit used on Pow-R-Gear switchboards. An upgrade from the Pow-R-Trip 7 trip unit is also available. Modification to the breaker and existing switchboard is required. Refer to **Tab 17, Pages V12-T17-35 to V12-T17-36.**

Digitrip Trip Unit Retrofit Kits

Trip unit retrofit kits are available for all SPB breaker frames. Refer to **Tab 17, Pages V12-T17-35 to V12-T17-36.**

IQ and PowerNet Communications Retrofits

Cutler-Hammer IQ products replace existing analog meters, instruments, and protective relays with microprocessor-based solid-state true rms sensing devices. IQ products can be furnished as components for field installation on the switchgear. The IQ products include the IQ Analyzer, IQ DP-4000, IQ 200 and IQ 300. Communications can then be tied to the Cutler-Hammer PowerNet system.

WF/WRP, ES and Pow-R-Line C

WRP Switchboard, Rear Access with Panel-Mounted Molded-Case Breakers

Pow-R-Line C Switchboard, Front Access with Panel-Mounted Molded-Case Breakers

Product Description

This class of switchboard is commonly called a Class II switchboard. Generally speaking, this means individually or panel-mounted main and panel-mounted feeder devices.

The WF/WRP switchboard that was built by Westinghouse in St. Louis, MO, consisted of front- or rear-accessible enclosures with various depths depending on the devices within the structure. In the front access design, Type WF, the rear of the switchboard was flush for all structures; the rear access design, Type WRP, was flush in the front and rear.

The WF/WRP switchboard design accommodated the use of DS, SPB, bolted pressure switch (CBC), molded-case circuit breaker or FDP fusible switches as main devices. Panel-mounted feeder devices could be either molded-case circuit breakers or FDP fusible switches. The WF/WRP design was moved to Sumter, SC, and Visalia, CA, and consequently enhanced with the introduction of the Series C breaker and some structural and busing changes.

In 1962, Eaton entered the switchboard market with the purchase of Mullenbach. Soon after the Mullenbach acquisition, Eaton entered into an agreement with Westinghouse to supply breakers and fusible devices for panelboards and switchboards. This led to the introduction of the ES switchboard using exclusively Westinghouse molded-case circuit breakers.

In the late 1980s, Westinghouse introduced a new and improved version of the WF/WRP switchboard using the Series C breaker. This new switchboard line, Pow-R-Line C, designates a family of service distribution switchboards incorporating new design concepts that fit the ever increasing need for applications on high short-circuit systems, while retaining maximum standardization, safety and convenience throughout the line.

Chronology

WF/WRP was introduced by Westinghouse in St. Louis, MO, in 1955. In 1988, the design was transferred to Sumter, SC, and Visalia, CA, as Pow-R-Line C switchboards. Consequently, the Cutler-Hammer Type ES switchboard version was later introduced in 1991 as a replacement for their version of the WF/WRP switchboard.

Replacement Capabilities

Eaton offers an extensive amount of products to support WF/WRP, ES and Pow-R-Line C switchboards.

Pow-R-Line C Match and Lineup Cubicles

Newly manufactured Pow-R-Line C switchboard structures to match and line up to existing WF/WRP switchboards. New Pow-R-Line C structures can also connect to existing switchboards (Type ES) with a transition section.

New Circuit Breakers

New SPB, DS and RD molded-case circuit breakers are available for replacement or to fill existing vacant cells. All breakers are newly manufactured and are mechanically and electrically the same as the breakers originally specified and supplied.

Circuit Breaker Provisions/Connector

Breaker provisions are required in switchboards when there is an existing space in a structure that is to be filled with a breaker. Provisions/connectors are available for most ratings of the WF/WRP design. Provisions are available for all ratings of the Pow-R-Line C designs including all parts required to complete the cell in accordance with the switchboard as originally supplied.

Factory Repair Service for SPB Breakers

Factory authorized non-warranty repair for all SPB breaker frames. Refer to **Page V12-T15-4** of this publication.

Circuit Breaker Parts

An extensive inventory of newly manufactured breaker renewal parts are available for SPB, DS and RD molded-case circuit breakers.

Switchboard Structure Parts

Switchboard parts are available for most designs. Newly manufactured replacement parts (such as doors, breaker provisions, lift trucks, metering, etc.) are available.

Technology Upgrades**Digitrip Trip Unit Retrofit Kits**

Trip unit retrofit kits are available for all SPB and DS breaker frames. Refer to **Tab 17, Pages V12-T17-33 to V12-T17-36**.

SPD Series Surge Protective Devices

Surge Protective Device

Product Description

Eaton SPD series of surge protective devices ensures that equipment is protected with the safest, most reliable and most advanced UL 1449 3rd Edition certified protectors. The array of features, options and configurations ensures that there is a unit for all electrical applications. The SPD family protects equipment from the damaging effects of surges and electrical line noise. Field installation is required.

Benefits

- SPD Series can be externally mounted to existing distribution equipment
- Surge ratings: 50, 80, 100, 120, 160, 200, 250, 300 and 400 kA
- Standard NEMA 1 enclosure, optional NEMA 4 and NEMA 4X enclosures.
- Surface or flush mounting
- Full range of diagnostic and monitoring options
- Remote mountable display panel

For more information about the Eaton family of surge products, contact your local Eaton Field Sales office.

IQ and PowerNet Communications Retrofits

Cutler-Hammer IQ products replace existing analog meters, instruments and protective relays with microprocessor-based solid-state true rms sensing devices. IQ products can be furnished as components for field installation on the switchboard or can be provided as new replacement front panels. The new replacement front panels available for switchboard assemblies include the IQ devices mounted and wired. The IQ products can be matched in numerous combinations to include the IQ Analyzer, IQ DP-4000, IQ 200 and IQ 300. Communications can then be tied to the Cutler-Hammer PowerNet System.

Type C-HRG (Low Voltage)

Originally a Westinghouse Product

Wall-Mounted C-HRG (resistors not shown)

Free-Standing C-HRG

Product Description

Cutler-Hammer® Type C-HRG from Eaton's electrical business is designed to improve the continuity of electrical service to critical processes. Systems designers sometimes use ungrounded distribution systems to avoid interrupting service during a ground fault. However, ungrounded systems have a significant disadvantage—the distribution system is subject to the harmful effects of ground faults, like high transient overvoltages. The Type C-HRG helps customers add the benefits of a grounded system to their ungrounded system.

Product History

High resistance grounding technology has been offered as an integral system within Eaton low voltage switchgear and switchboard products since the early 1970s. In 1994, Eaton adopted the technology into the C-HRG, which is a standalone or wall-mounted product ideal for adapting to the existing electrical system.

Product History Time Line

Product	1994	2000	Present
C-HRG Low Voltage			

General Information

Overview

Where continuity of service is a high priority, high resistance grounding can add the safety of a grounded system while minimizing the risk of service interruptions due to grounds. The concept is a simple one: provide a path for ground current via a resistance that limits the current magnitude, and monitor to determine when an abnormal condition exists.

The ground current path is provided at the point where the service begins by placing resistance in the connection from system neutral-to-ground. Control equipment continuously measures ground current; a relay detects when the current exceeds a predetermined level. An alarm alerts building personnel that a ground exists. The system has built-in fault tracing means to assist in finding the source of the ground. An integral transformer provides control power from the primary source.

Minimum Criteria for Use

High resistance grounding systems can be applied to either grounded or ungrounded three-wire distribution systems. Per NEC® 1996, 250.5(b) exception No. 5, the following criteria must be met before using the C-HRG:

- The conditions of maintenance and supervision ensure that only qualified persons will service the installation
- Continuity of power is required
- Ground detectors are installed on the system
- Line-to-neutral loads are not served

Wye or Delta System

Adding the Type C-HRG to a wye connected system requires only that the resistors supplied be connected in series with the neutral-to-ground connection of the power source. Adding the Type C-HRG to an ungrounded delta system requires the creation of a neutral point. Transformers are supplied for that purpose in the enclosure. The resistors supplied are then connected at that point. In both cases, the components supplied are chosen to limit the ground current to a maximum value of 5A.

Typical C-HRG Application

Ground Fault Detection

When one phase of a system becomes grounded, additional current will flow. As all ground current must flow through the grounding resistor assembly, a current sensing relay is placed in this circuit, allowing detection when a ground fault occurs. If chosen, a voltage-sensing relay can be provided to accomplish the same function.

Pulser Circuit

The pulser circuit offers a convenient means to locate the faulted feeder and to trace the fault to its origin. The pulser is available any time a fault has been detected. The "pulse" light flashes on and off, corresponding to the ON-OFF cycles of the pulsing contactor. The pulser contactor switches a bank of resistors on and off, allowing a momentary increase in the ground current.

Ground Fault Location

The current pulses can be noted with a clamp-on ammeter when the ammeter is placed around the cables or the conduit feeding the fault. The operation tests each conduit or set of cables until the pulsing current is noted. By moving the ammeter along the conduit, the fault can be traced to its origin. The fault may be located at the point where the pulsing current drops off or stops. If little or no change in the pulsing current is noted along the entire length of a conduit, then the fault may be in the connected load.

Sequence of Operations

Normal

- Green "normal" light on
- Red "ground fault" light off
- White "pulse" light off
- System control switch in "normal" position
- Reset control switch in either "auto" or "manual"

Test

- Turn and hold the system control switch in the "test" position. Phase B will be grounded via the test resistor
- The ground current will activate the sensing circuit, causing the green "normal" light to turn off and the red "ground fault" light to turn on. The pulser will be activated as well
- The white "pulse" light will turn on and off as the pulser contactor closes and opens
- The ground current ammeter will display the total ground current, including the incremental pulse current
- When ready, return the system control switch to "normal." The pulser will stop. If the reset control is in the "manual" position, turn it to "reset" to reset the fault sensing circuit
- The red "ground fault" light will turn off, and the green "normal" light will turn on
- Test mode is not available if the system is detecting a ground. The sensing circuit will disable the test circuit.

Ground Fault

- When the sensing circuit detects a fault, the green "normal" light will turn off and the red "ground fault" light will turn on
- The ground current ammeter will indicate the total ground current
- To use the pulser, turn the system control switch to "pulse." The pulser contactor will cycle on and off as controlled by the recycle timer relay
- Use the clamp-on ammeter to locate the faulted feeder. Open the feeder and clear the fault
- If the reset control switch is in the "manual" position, turn it to "reset" to reset the sensing circuit

Note: If reset control is in "auto," it will reset itself.

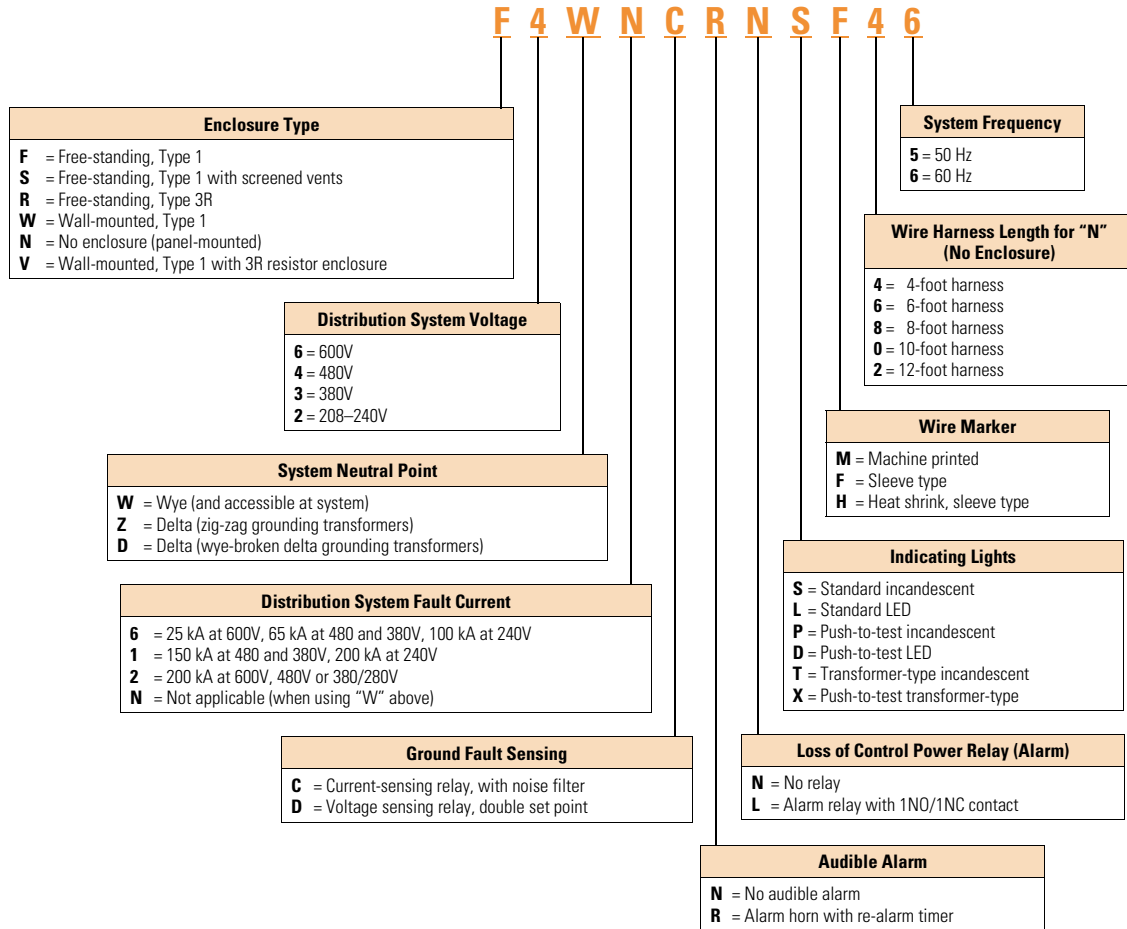

- When ready to restore service to the load, close the feeder
- Return the system control to "normal"

Note

① Phase-to-neutral loads cannot be fed from the same system transformer to which the C-HRG is connected. These loads must be fed from a downstream, delta-wye transformer with a solidly grounded neutral on the secondary.

Type C-HRG (Medium Voltage)

Free-Standing C-HRG

Product Description

The Type C-HRG is designed to improve the continuity of electrical service to critical processes. Systems designers sometimes use ungrounded distribution systems to avoid interrupting service during a ground fault. However, ungrounded systems have a significant disadvantage—the distribution system is subject to the harmful effects of ground faults, like high transient overvoltages. The Type C-HRG helps customers add the benefits of a grounded system to their ungrounded system.

Product History

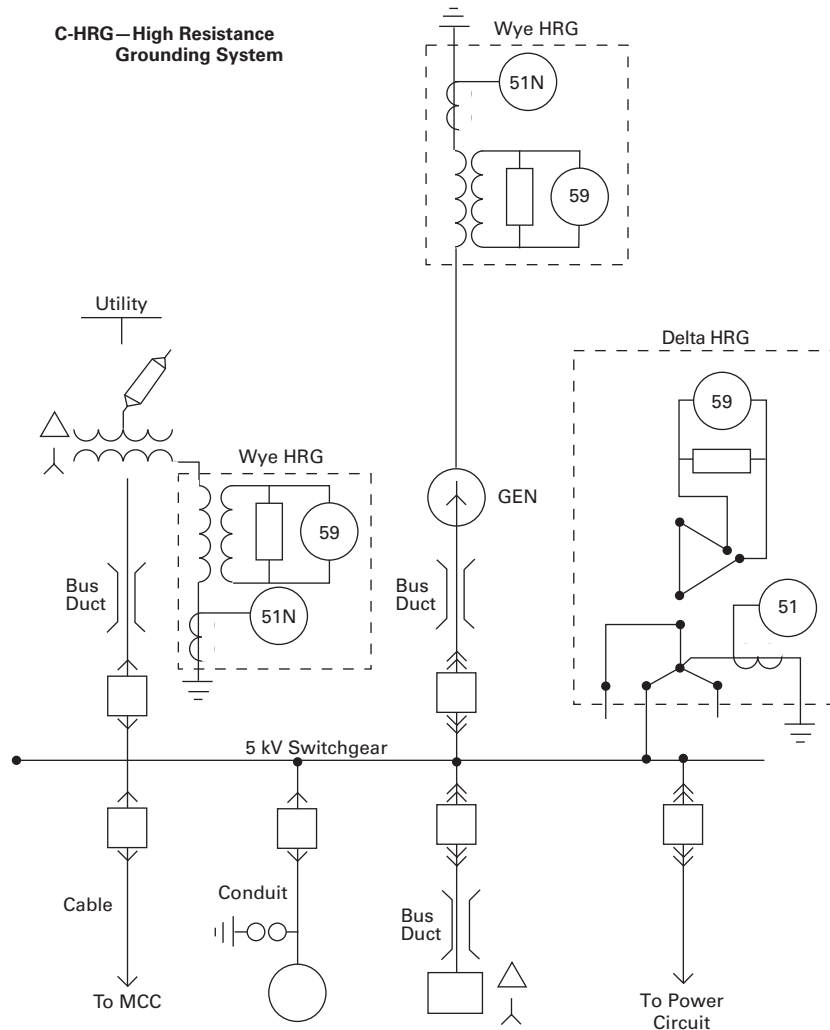

High resistance grounding technology has been offered as an integral system within medium voltage switchgear for many years. In 1996, Eaton adopted the technology into the C-HRG, which is a stand-alone product ideal for adapting to the existing electrical system.

Product History Time Line

Product	1995	2000	Present
C-HRG Low Voltage			

General Information

High Resistance Grounding System

Overview

Where continuity of service is a high priority, high resistance grounding can add the safety of a grounded system while minimizing the risk of service interruptions due to grounds. The concept is a simple one: provide a path for ground current via a grounding transformer (with adjustable resistance across its secondary) that limits the current magnitude and a monitor to determine when an abnormal condition exists.

The ground current path is provided at the point where the service begins, by placing a predominantly resistive impedance in the connection from system neutral to ground. Control equipment continuously measures ground current; a relay detects when the current exceeds a predetermined level. An alarm alerts building personnel that a ground exists. The system has built-in fault tracing means to assist in finding the source of the ground. A 120 Vac supply (remote) is required for control power for the system.

Minimum Criteria for Use

The C-HRG MV is offered at the 5 kV class rating. It can be applied to delta or wye ungrounded three-wire distribution systems. Standard dimensions are 36.00 W x 40.00 D x 92.00 H inches (914.4 W x 1016.0 D x 2336.8 H mm).

Wye or Delta System

To add high resistance grounding to a wye-connected system, resistors are placed across the secondary of a grounding transformer whose primary is placed in series with the neutral-to-ground connection of the power source. To add high resistance grounding to an ungrounded delta-connected system, a neutral point must be created. Three single-phase transformers can be interconnected in a wye-broken delta configuration to provide such a neutral point.

Ground Fault Detection

When one phase becomes grounded, additional current above the charging level will flow. As all ground current must flow through the grounding resistor/grounding transformer assembly, an ammeter in this circuit will read the total amount of ground current. By placing a current-sensing relay in series with the ammeter, the current relay can be adjusted to pick up at a level in excess of the capacitive charging current, thus indicating the abnormal condition. Alternatively, an optional voltmeter relay can be connected across the grounding resistors, to accomplish the same function.

Pulser Circuit

The pulser circuit offers a convenient means to locate the faulted feeder and to trace the fault to its origin. The pulser is available any time a fault has been detected. The pulse intervals are controlled by an adjustable recycle timer. The "pulse" light flashes on and off, corresponding to the ON-OFF cycles of the pulser contactor. The pulser contactor switches a bank of resistors on and off, thus allowing a momentary increase in the ground current.

Ground Fault Location

The current pulses can be noted with a clamp-on ammeter when the ammeter is placed around the cables or the conduit feeding the fault. The operator tests each conduit or set of cables until the pulsing current is noted. By moving the ammeter along the conduit, or checking the conduit periodically along its length, the fault can be traced to its origin. The fault may be located at the point where the pulsing current drops off or stops. If little or no change in the pulsing current is noted along the entire length of a conduit, then the fault may be in the connected load.

Standard Features

- Current sensing ground fault detection (2–10A pickup/0.5–20 second delay)
- Ground current transformer (10/10 ratio)
- Control circuit pull fuseblock
- Ground current ammeter (0–10A, 1% accuracy)
- Indicating lights Red (ground fault), Green (normal), White (pulse)
- Adjustable pulsing timer (0–10 seconds)
- Tapped resistors (limits primary current to 3–6A)
- Three-position selector switch (normal, pulse, test)
- Control switch for manual or automatic reset
- Ground fault contacts (1NO/1NC)
- Shorting terminal block for ground current CT
- UL® label
- Wiremarkers

Sequence of Operations**Normal**

- Green "normal" light on
- Red "ground fault" light off
- White "pulse" light off
- System control switch in "normal" position
- Reset control switch in either "auto" or "manual"

Test

- Turn and hold the system control switch in the "test" position
- This mode will test the control circuitry only. It will bypass the sensing circuit and cause the green "normal" light to turn off and the red "ground fault" light to turn on. The pulser will be activated as well
- The white "pulse" light will turn on and off as the pulser contactor closes and opens. However, the ground current ammeter will not display the total ground current, including the incremental pulse current
- When ready, return the system control switch to "normal." The pulser will stop. If the reset control is in the "manual" position, turn it to "reset" to reset the fault sensing circuit
- The red "ground fault" light will turn off, and the green "normal" light will turn on
- Test mode is not available if the system is detecting a ground. The sensing circuit will disable the test circuit

Ground Fault

- When the sensing circuit detects a fault, the green "normal" light will turn off and the red "ground fault" light will turn on
- The ground current ammeter will indicate the total ground current
- To use the pulser, turn the system control switch to "pulse." The pulser contactor will cycle on and off as controlled by the recycle timer relay
- Use the clamp-on ammeter to locate the faulted feeder. Open the feeder and clear the fault
- If the reset control switch is in the "manual" position, turn it to "reset" to reset the sensing circuit

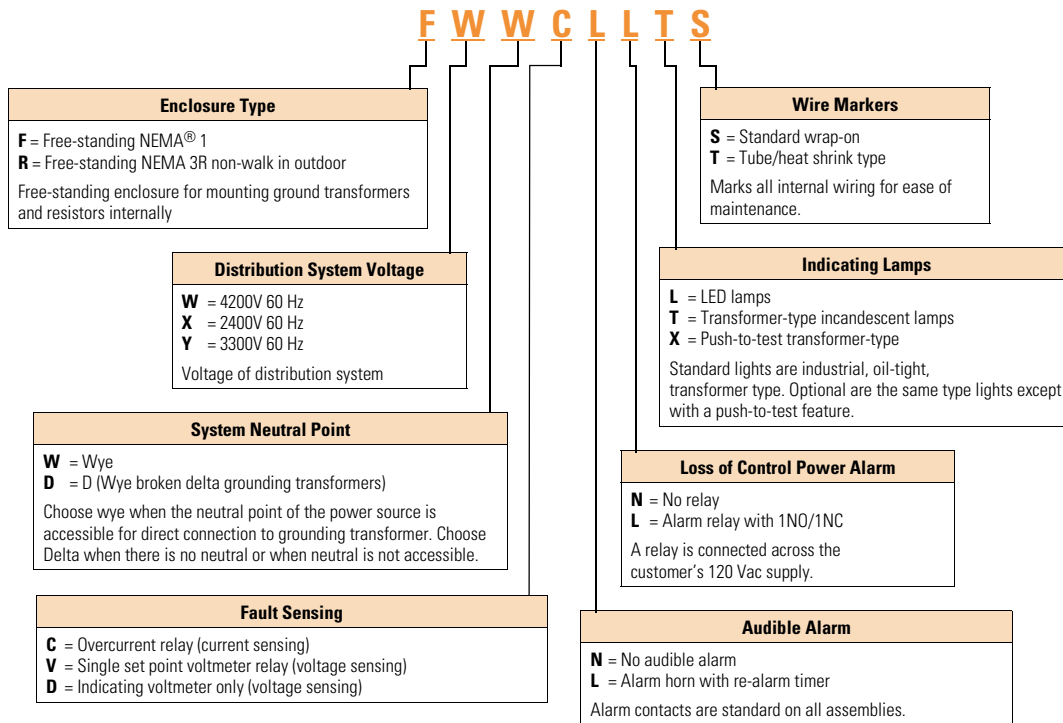

Note: If reset control is in "auto," it will reset itself.

- When ready to restore service to the load, close the feeder
- Return the system control to "normal"

Catalog Numbering System

Customer Required Information

A C-HRG High Resistance Grounding Assembly can be completely described by an 8-digit catalog number: MVRG-_____

Example: MVRG-FWWCLLTS defines a free-standing Type 1 enclosure, 4200 V/60 Hz, Wye-connected system, current-sensing control scheme, alarm horn with re-alarm timer, alarm relay with 1NO and 1NC, transformer type incandescent lights, wrap-on wiremarkers.

Assemblies and Power Circuit Breakers

DS Switchgear

DSII Switchgear Assembly

Magnum DS Switchgear

Product Description

Cutler-Hammer® low voltage switchgear assemblies from Eaton’s electrical business are metal enclosures that typically contain power circuit breakers, control/measuring devices such as relays and meters, and the power bus work. The rated maximum voltage is 600V, for AC power systems. Low voltage switchgear is used to protect, control and monitor the electrical power system. Present design low voltage switchgear conforms to the following standards: ANSI C37.20.1, C37.51, UL® 1558, NEMA® SG3, NEMA SG5 and CSA®.

Perhaps the most unique benefit of switchgear is the power circuit breakers within—they have a “withstand rating” and more flexible trip units, all which provide better coordination of downstream

circuit breakers. It is also common to find this switchgear coupled to a power distribution transformer, making the entire assembly called a secondary unit substation.

Product History

It is very uncommon to find any more installed-base of the Westinghouse® DA or DK vintage switchgear—both vintages preceded the Westinghouse DB switchgear design dated 1950.

It is very common to find DB switchgear with hundreds of thousands of DB circuit breakers still in operation.

In 1967, Westinghouse introduced DS switchgear along with the DS and DSL circuit breakers. The first DS breakers used the original solid-state trip unit called the Amptector®. The Amptector was later replaced by the microprocessor-based, true rms sensing, Digitrip™ trip unit models 500, 600, 700 and 800.

In 1994, the DS breaker became available in the new DSII switchgear assembly. DSII switchgear is designed to be much easier to install and to maintain. It also uses new “U” shape vertical bus design. Perhaps the most noticeable external difference

is the removable control circuit terminal block tray, which is charcoal-gray and located above each breaker door. Upon its arrival in 1996, the DSII breaker became the standard offering in DSII switchgear assemblies. The DSII breaker was the first breaker to use the newer family of Digitrip trip unit models 510, 610, 810, 910, OPTIM™ 750 and 1050. DSII breakers also provide genuine standardization of breaker wiring, particularly the secondary contact points, without reducing features and options.

In 1998, the Magnum™ DS switchgear along with the new Magnum DS breaker was introduced. One major advantage of the Magnum DS design is higher ratings in less space. Perhaps the most visible difference with Magnum is the “through-the-door” design, permitting visibility of the breaker’s trip unit without opening the door. Another new feature of the Magnum design is the secondary contact block location at the top-front of each cell, rather than in the rear as with previous designs. Magnum DS switchgear assemblies also have an isolated secondary control wireway, uniquely located at the side of each structure.

DB Assemblies and Power Circuit Breakers

DB Switchgear with DB Air Circuit Breakers

Product Description

DB switchgear should be found only with the Westinghouse logo and nameplates. The last assembly shipped about 15 years before the acquisition by Eaton.

Many breakers were originally shipped with electromechanical trip units, but it is common to find many of them retrofitted with Amptector or Digitrip trip units.

One characteristic of this switchgear is the viewable, through-the-door breaker handle, which could be operated without opening the door.

DB assemblies were offered with either “Fixed-Mounted” breakers or “Drawout (three-position) type. Fixed breakers have no test position.

The breakers in this switchgear design include:

- DB15, DB25, DB50, DB75, DB100 (standard)
- DBL15, DBL25, DBL50 (current limiting)

Special application breakers include:

- DBF6, DBF16, DBF40 (DC field discharge)
- DBW15, DBW25, DBW50 (resistance welding)

The DB switchgear structures were approximately 90 3/8-inch high construction with a universal frame that accommodated breaker compartment widths of 18.00, 26.00, 30.00 and 36.00 inches. All main bus joints and tap connections are silver plated and tightly clamped with through-bolts to ensure maximum conductivity. The outdoor switchgear was a walk-in type with rear hinged doors for easy access to connections.

Ratings

- DB switchgear bus 800–4000A
- DB breaker 15–4000A
- Voltage 208–600V
- Interrupting capacity 15–150 kA

Chronology

This switchgear was manufactured in East Pittsburgh, PA, from 1950 to 1980.

Replacement Capabilities

DB-AR Replacement Breakers

DB25-AR600NM—Front View

DB25-AR600NM—Rear View

The DB-AR breakers are brand new air replacements (AR-Series) designed to replace the original DB breaker. This solution is available for most three-position drawout DB breakers within original Westinghouse switchgear. The new AR-Series breaker permits DB switchgear modernization by using state-of-the-art Eaton Magnum breaker technology. The DB-AR is designed, manufactured and tested to applicable IEEE/ANSI standards.

Class 1 Reconditioning

Reconditioning Service is available for most frame sizes of the DB breaker. Class 1 Reconditioning is Eaton’s process of maintaining low voltage power breakers to their fullest capability. We disassemble each breaker, clean and test each part using component-specific methods, then reassemble and perform final testing to ensure that each breaker is restored to operating condition—all using the original manufacturer’s instructions and parts. New trip units can also be retrofitted during this process.

DB Breaker Parts

DB breaker replacement parts are available built from the original drawings and design specifications. Among the items stocked are asbestos-free arc chutes, complete pole units, contacts, primary disconnects and coils.

DB Air Circuit Breakers

New factory manufactured breakers are available in three-position drawout configurations only for the DB15, DBF6 and DBF16. Fix-mounted and single-position configuration breakers are available for the DB15, DB25, DBL25, DB50 or DBL50.

Technology Upgrades

Digitrip Trip Unit Retrofit Kits

Available for all DB breaker frame sizes. Please see the switchgear trip unit retrofit kits on **V12-T17-17** through **V12-T17-51** for more detail.

DB-VSR (Vacuum Starter Retrofits)

For FVNR, motor-starting applications ONLY—this solution significantly lengthens the life-span of the “motor starter” and provides better motor overload protection. The DB25-LV-VSR contains the V201 vacuum contactor and the C440 motor overload relay.

DB25-LV-VSR

DS Switchgear Assemblies General Information

Description	Ratings	Chronology
DS Switchgear Vintage I and II, 1969–1984 at East Pittsburgh, PA		
<p>The first vintage of DS switchgear was the first switchgear that incorporated the DS breaker with a solid-state trip unit (Amptector). During this time, the DS532 breaker was used. The DS532 breaker was a 3000A frame breaker with an interrupting rating of 50,000 symmetrical amperes. The structures themselves were of a stepped roof design that incorporated a standard bolted copper or flash welded aluminum bus design. Other characteristics of this switchgear include the following: rear frame height was 87.50 inches, flat roof sheets, ventilated front doors, wire ducts, removable instrument modules and a welded frame design. The breaker compartments were also different with fuse trucks stacked above the mains, the DS840, DS532 and the newly developed DS632. The outdoor design incorporated the use of a walk-in type side door entry.</p> <p>The second vintage of switchgear was a new design that incorporated the use of both bolted copper and welded extruded aluminum rise bus. It is basically the same as the first vintage but with a revised bus design.</p>	800–4000A 208/600V	The first vintage was built from September of 1969 to approximately September of 1973 in East Pittsburgh, PA, using the shop order numbers with a prefix of 24Y. The second DS vintage was also built in East Pittsburgh, which used the 27Y prefix on shop orders. This vintage was built the same time as the WPA design in St. Louis, MO. The switchgear in East Pittsburgh was designed to be used for industrial applications, whereas the St. Louis design was built for commercial applications.
WPA Switchgear, 1973–1984 at St. Louis, MO		
<p>The WPA switchgear was designed for commercial applications that also used DS breakers, which was similar to the East Pittsburgh design for industrial applications. The two designs differed structurally but used the same breakers. Some characteristics of the WPA design are as follows: riser bus was tapered design, frames were bolted and not welded, height of 9.00 inches, neutral bus mounted on rear frame, did not use removable instrument compartments and outdoor design had front and rear doors. In all, the WPA design differed extensively compared to the East Pittsburgh design.</p>	800–4000A 208/600V	This vintage was built from February of 1973 to approximately October of 1984 in St. Louis. Usually the switchgear is identified by General Order and Item numbers. Shop order numbers were not used.
DS Switchgear Vintage III, 1984 at St. Louis, MO		
<p>The third generation of DS switchgear was introduced due to the change of plant locations. It is classified as a vintage because it was the beginning of the merge between two plants (St. Louis and East Pittsburgh). The engineering was completed in East Pittsburgh and the assembly was built in St. Louis, along with the Cincinnati, OH, plant to help pick up the slack until full production in St. Louis. This vintage was similar to the previous 27Y style with a few modifications. It was the first time that both DS and DSL were used in switchgear by the use of a conjunction box. The physical appearance also changed by increasing the height to 92.00 inches and adding top hat vents that protruded 4.00 inches above the switchgear. Internally the neutral bus was located in the bus compartment along with unified breaker compartments for the variety of breakers.</p>	800–4000A 208/600V	This vintage lasted from May of 1984 to approximately October of 1984 in East Pittsburgh. Usually the switchgear shop order number is defined by a prefix of 28Y.
DS Switchgear Vintage IV, 1984–1990 at St. Louis, MO		
<p>This vintage of switchgear was a combination of the St. Louis WPA and East Pittsburgh design. The design was classified as a hybrid between the two that consisted of the East Pittsburgh design in the front compartments that held the DS breaker, and the St. Louis design in the rear compartment that housed the bus. The rear compartment still used the tapered riser bus (a characteristic of the St. Louis design), which was used right up until the DS switchgear moved to Asheville, NC. The design was very similar to the design today except for the different riser bus along with the height being 92.00 inches.</p>	800–4000A 208/600V	This vintage was built from October of 1984 to approximately May of 1990 in St. Louis. Usually the switchgear is identified by general order and item numbers. 28Y shop order numbers started in 1987 and continued into the Asheville design.
DS Switchgear Vintage V, 1990–1996 at Asheville, NC		
<p>The vintage was built from May of 1990 to the end of 1996 in Asheville. The switchgear is identified by shop order number 28Y. The switchgear incorporates both designs with the option for the variety of IQ products. The riser bus went back to a full rated type that is bolted copper only. Aluminum bus work was initially done only on special orders at customer request. The switchgear also has many improvements such as the design of an instrument panel door that was able to accommodate three device panels across DS632 in the C and D compartments and a variety of communication capabilities with IMPACC. The outdoor design changed with the concept of a side walk-in enclosure.</p>	800–4000A 208/600V	This vintage was built from May of 1990 to the end of 1996 in Asheville. The switchgear is identified by shop order number 28Y.

DS Assemblies and Power Circuit Breakers

*DS Switchgear Assembly
Typical Design, 1991*

Product Description

DS switchgear was introduced in 1969 and would be found mostly with the Westinghouse logo and nameplates. However, some assemblies shipped after the 1994 acquisition by Eaton could likely have product labels with both Westinghouse and Cutler-Hammer product names.

DS switchgear uses the drawout version of the DS and DSL low voltage power breakers. Each breaker is located within an individual compartment. Each compartment has extension rails for supporting the breaker while removing it from the compartment. The breaker can be in either of the following positions with the door closed:

- Connect
- Test
- Disconnect
- Remove

The original DS breaker contained the original solid-state trip unit—Amptector. The Amptector was later replaced by the original family of microprocessor-based, true rms sensing, Digitrip trip unit models 500, 600, 700 and 800. In the late 1990s, DS breakers started shipping with Digitrip models 510, 610, 810 or 910.

The breakers in this design included:

- DS206, 206H, 206E, 416, 416H, 416C, 420, 532, 632 or 840
- DSL206, 416, 420, 632 or 840

DS metal-enclosed switchgear was designed to meet the following standards:

- ANSI C37.20.1
- UL 1558
- NEMA SG5

DS low voltage power air circuit breakers (LVPACB) were designed to meet the following standards:

- ANSI C37.13, C37.16, C37.50 and C37.51
- UL 1066
- NEMA SG3

Chronology

There are five vintages of DS switchgear. Please see General Information on **Page V12-T17-4** for more detail.

Replacement Capabilities

DS206H—Front

DS206H—Rear

DS Cell Provisions

New DS Air Circuit Breakers

New DS circuit breakers are available for replacement or to fill existing vacant cells. All breakers are newly manufactured and are mechanically and electrically the same as the breakers as originally specified and supplied.

DS Circuit Breaker Cell Provisions

Breaker provisions are required in switchgear when there is an existing space in a structure that is to be filled with a breaker. Provisions are available for all ratings and include all parts required to complete the cell in accordance with the switchgear as originally supplied in vintages IV and V only.

DS Breaker Parts

An extensive inventory of newly manufactured renewal parts for DS and DSL power circuit breakers are available.

DS Switchgear Structure Parts

DS switchgear parts are available for most DS designs. Newly manufactured replacement parts (such as doors, breaker provisions, lift trucks, metering, etc.) are available.

Class 1 Reconditioning

Reconditioning Service is available for the entire family of DS breakers. Class 1 Reconditioning is Eaton's process of maintaining low voltage power breakers to their fullest capability. We disassemble each breaker, clean and test each part using component-specific methods, then reassemble and perform final testing to ensure that each breaker is restored to operating condition—all using the original manufacturer's instructions and parts. New trip units can also be retrofitted during this process.

Technology Upgrades

IQ and PowerNet™ Communications

Digital IQ-type products can be used to upgrade existing analog devices such as meters. The new IQ-type products can be furnished as loose, individual components for field retrofitting or can be furnished on new replacement doors, such as in the photo to the left. The new instrument compartment door will fit all vintages of DS assemblies from 1968 to the present. Please see IQ products **Tab 10** for further details on the latest offerings.

Digitrip Trip Unit Retrofit Kits

Retrofit kits are available for all DS breaker frame sizes. Please see the switchgear trip unit retrofit kits on **Pages V12-T17-17–V12-T17-51** for more detail.

DSII Assemblies and Power Circuit Breakers

DSII Switchgear Assembly

Product Description

The DSII low voltage switchgear design was first introduced in 1994 but was originally available with only the DS or DSL breakers. Upon its arrival in 1996, the DSII breaker became the standard offering in DSII switchgear assemblies.

The DSII switchgear design uses only the drawout version of the power breakers. Each breaker is located within an individual compartment. Each compartment has extension rails for supporting the breaker while removing it from the compartment. The breaker can be in either of the following positions with the door closed:

- Connect
- Test
- Disconnect
- Remove

The DSII switchgear is basically designed for easier installation and maintenance. Control circuit terminal blocks are mounted in a completely removable tray located at the front of the assembly above each circuit breaker—helping customers perform routine inspection of control wires. This tray is charcoal-gray and is perhaps the most noticeable external difference between the DSII and the DS designs.

The DSII breaker is very similar to the DS. In fact, the DSII breaker uses most of the same internal components—renewal parts can often be shared. The DSII breaker was the first to include the newer family of Digitrip RMS trip units: model 510, 610, 810, 910, and OPTIM 750 or 1050. Unlike the DS breaker, however, the DSII breaker provides genuine standardization of breaker wiring, including secondary contact points—without reducing features and options. This is achieved with a larger secondary contact block. The DSII breaker has up to four 12-point, white secondary contact blocks whereas the DS breaker, has up to four 8-point, black secondary contact blocks. DSII breakers therefore cannot be installed into a DS breaker cell.

DSII metal-enclosed switchgear was designed to meet the following standards:

- ANSI C37.20.1
- UL 1558
- NEMA SG5

DSII low voltage power air circuit breakers (LVPACB) were designed to meet the following standards:

- ANSI C37.13, C37.16, C37.50 and C37.51
- UL 1066
- NEMA SG3
- CSA

Ratings of DSII Switchgear

- 2000–5000A vertical and cross bus
- 6000A cross bus option
- 600V maximum
- 100,000A bus bracing standard
- 200,000A bus bracing optional

DSII Switchgear Assemblies Dated 1994–Present with Shop Order Numbers Ranging from 82Y1000 to 82Y3000

- Built from April of 1994 to the present, these assemblies contain the following DS breakers:
 - DS-206, DS-206H, DS-206E, DS-416, DS-416H, DS-420, DS-632 or DS-840
 - DSL-206, DSL-416, DSL-420, DSL-632 (with fuse truck) or DSL-840 (with fuse truck)
 - DSII switchgear assemblies dated 1996–present with shop order numbers 82Y3001 and larger

DSII Switchgear Assemblies Dated 1994–Present with Shop Order Numbers 82Y3001 and Larger

- Built from April of 1996 to the present, these assemblies contain the following DSII breakers:
 - DSII-308, DSII-508, DSII-608, DSII-516, DSII-616, DSII-620, DSII-632, DSII-840 or DSII-850
 - DSLII-308, DSLII-516, DSLII-620, DSLII-632 (with fuse truck) or DSLII-840 (with fuse truck)

DSII Low Voltage Assemblies and Power Circuit Breakers

Replacement Capabilities*DSII308—Front**DSII308—Rear**DSII Cell Provisions***New DSII Air Circuit Breakers**

DSII Switchgear Structure Parts

DSII switchgear parts are available for most DS designs. Newly manufactured replacement parts (such as doors, breaker provisions, lift trucks, metering, etc.) are available.

Technology Upgrades*DSII-VSR—Front***DSII-VSR (Vacuum Starter Replacement)**

For FVNR, motor-starting applications ONLY—this solution might be available to significantly lengthen the life-span of the "motor starter" as well as to provide better motor overload protection. The DSII-VSR is manufactured as a new assembly and is designed to rack into the same switchgear cells that a DSII breaker is removed from. It will physically fit into any of the "quarter-high" cells ranging from the DSII-308 to the DSII-620. However, the maximum FLA rating is currently 425A. The current design DS-VSR contains the V201 vacuum contactor and appropriate overload protection.

Digitrip Trip Unit Retrofit Kits

Retrofit kits are available for all DSII breaker frame sizes. Please see the switchgear trip unit retrofit kits on **Pages V12-T17-17–V12-T17-51** for more detail.

Magnum DS Assemblies and Power Circuit Breakers

Magnum DS Switchgear

Product Description

Cutler-Hammer Magnum DS switchgear started shipping in 1998. Perhaps the most distinctive feature when compared to the original DS vintage is the “through-the-door” design.

The following functions may be performed without opening the circuit breaker door: levering the breaker between positions; operating manual charging system, including viewing of the spring charge status flag; closing and opening the breaker; viewing/adjusting the trip unit and reading the breaker rating nameplate.

The breakers are four-position drawout design—connected, test, disconnected or removed.

The breakers can also be equipped with ARMs technologies, which will reduce arc flash energy available at downstream devices during maintenance periods.

A unique vertical and cross bus configuration provides an optional industry-leading short-circuit withstand rating of 200,000A without the need for upstream current-limiting fuses.

Vertical and cross bus ratings are based on a UL and ANSI standard temperature rise of 65°C above a maximum ambient air temperature of 40°C.

Magnum DS switchgear and breakers conform to the following standards:

- ANSI C37.20.1, C37.51
- UL 1558, UL 1066
- NEMA SG5, SG3
- CSA

The assemblies have undergone an extensive seismic qualification program. The test program used ANSI standard C37.81, the Uniform Building Code (UBC®) and the California Building Code (CBC) as a basis for the test program. The assemblies have been tested and qualified to exceed these requirements.

Magnum DS Switchgear Ratings

- Cross bus ampacity
 - 2000, 3200, 4000, 5000, 6000
- Vertical bus ampacity
 - 2000, 3200, 4000, 5000
- Bus bracing
 - 100, 150 or 200 kA

Magnum DS Without Current Limiters

Replacement Capabilities

800–3200A Drawout Breaker

New Magnum DS Breakers

New breakers are readily available for all frame sizes and interruption ratings.

Renewal Parts and Accessories

New breaker parts and accessories are readily available for all frame sizes and interruption ratings.

Cell Provisions and Upgrades

Switchgear cell provisions are required when an existing structure blank space needs to be filled with a new Magnum DS circuit breaker. Cell upgrades are required when the provision already exists, but the need to upgrade ampacity and/or interrupting rating is necessary. Sometimes, new riser bus must also be installed with this offering.

Class 1 Reconditioning

Reconditioning service is available for the entire family of Magnum DS breakers. Class 1 reconditioning is Eaton’s process of maintaining low voltage power breakers to their fullest capability. We disassemble each breaker, clean and test each part using component-specific methods, then reassemble and perform final testing to ensure that each breaker is restored to operating condition—all using the original manufacturer’s instructions and parts.

Note

① Interrupting rating is 130 kA at 240V.

Breaker Test Kits

Test Kit Unit

Test Kit

This test kit can be used for testing DS, DSII and Magnum breakers that are equipped with either Amptector or Digitrip RMS trip units. Test kit2 includes test unit and adapter.

Note: Each kit contains the 140D481G03 basic tester (Amptector-Ready) and the adapter for the selected breaker Digitrip style.

Test Kit

Description	Catalog Number
DS/DSII Digitrip test kit	8779C02G02
Magnum Digitrip test kit	8779C02G05

Adapters

Adapter

In May of 1993, the test port changed on DS circuit breakers that have Digitrip RMS trip units. The test port was moved from the front cover to the left-hand side, as you face the front of the breaker. The port was also changed from an 11-pin banana plug to a 9-pin plug. The adapter is for using a 140D481(G02R), (G02RR) or (G03) tester to test DS breakers with Digitrip that have the side-mounted, 9-pin plug. The adapter converts the banana plugs on the tester to a 9-pin plug. DO NOT use the adapter with the old 140D481G01 or 140D481G02 tester.

On Magnum breakers, the test port is located on the front cover of the trip unit. The port is a 14-pin plug; the adapter converts the banana plugs on the tester to a 14-pin plug.

Note

① These parts are used with any breaker that was upgraded with "Digitrip Retrofit Kits."

Procedure for Identifying Renewal Parts

For all switchgear requests, include information from the list below to ensure that parts and breakers supplied will consist of correct options and settings. With the variety of switchgear vintages, the information is needed to supply the correct parts. There might be modifications needed to the breaker cell or to the bus work to accommodate the breaker that will only be recognized by the drawings.

For all requests include the following:

- Shop order number
- Front view drawing number
- General order number (GO#)
- Manufacturing date
- Item number
- Metering required
- Optional relays
- CTs
- What changes have been made since equipment was originally installed in the field?

Requests requiring additional or replacement breakers also require the following information:

- Breaker type
- Trip rating
- MO or EO
- Trip unit
- Three-wire or four-wire
- Trip settings (LSIG)
- Fixed or drawout
- Which compartment
- Any new options

Low Voltage Competitive Upgrades—AR-Series Replacement Breakers

**Competitive Upgrades—
Low Voltage Power
Air Breakers**

**AR-Series
Replacement Breakers**

The AR-Series (air-replacement) breakers are not retrofits. They are 100% new breakers used to completely replace the original drawout type power air circuit breaker. This solution uses state-of-the-art Cutler-Hammer Magnum breaker technology that provides maximum life-extension and switchgear modernization. The offering includes a new breaker, a cassette with extension rails and a standard door. No modifications are required to the original line/load power stabs or the secondary disconnect contacts.

This solution can eliminate safety problems caused by defective racking and/or operator mechanisms. Additional safety against arc flash incidents can be obtained by equipping the breaker with ARMs Technologies, thereby reducing the arc flash energy available at downstream devices during maintenance periods. Additional switchgear maintenance problems such as parts unavailability and lengthy maintenance procedures can be eliminated. This solution often provides a substantial total installed cost savings when compared to completely replacing the switchgear assembly.

In many instances, the AR-Series replacement breaker can be combined with engineering services to provide continuous current and/or interruption rating upgrades.

The AR-Series breakers are designed, manufactured and tested to modern IEEE/ANSI standards.

Designs are available for a wide variety of drawout type low voltage power air circuit breakers (LVPACB) originally manufactured by Westinghouse, Federal Pacific Electric, Allis-Chalmers, ITE and General Electric.

Pictured on this page are several examples of available designs. Contact your local Eaton sales representative for information on other breaker types.

Low Voltage Breaker Drawout Vacuum Starter Replacement

DB-25-LV-VSR Shown

Product Description

Eaton's low voltage VSR is a self-contained vacuum starter replacement for a low voltage drawout air circuit breaker used for motor starting applications.

In some cases, low voltage air circuit breakers are used for motor starting applications. Air circuit breakers are not designed to withstand the frequent switching service and the mechanical stresses associated with repetitive motor starting duty. This is due to the breaker mechanism that must be designed to close and latch against a fault. In order to meet these requirements, the mechanism must close at high speeds with a great deal of force. Frequent closing operations stress and deteriorate the breaker mechanisms.

Eaton's LV-VSR is a self-contained replacement vacuum starter for a low voltage drawout air circuit breaker. The LV-VSR is interchangeable with the drawout breaker element and requires no cell modifications.

Features

Advantages

The use of an LV-VSR vacuum starter can prolong device life and significantly reduce maintenance repair and downtime.

A low voltage air circuit breaker has an effective life of 4000 operations while an LV-VSR vacuum starter has an effective life of 1,000,000 operations. For example, a motor starting application that required two starts per hour on continuous duty would require a major rebuild of the low voltage breaker within three months. The expected life of an LV-VSR vacuum starter would be over 50 years.

The LV-VSR vacuum starter uses state-of-the-art Eaton vacuum interrupters. The interrupters employ the latest vacuum technology with long life, resistance to environmental contaminants and positive contact wear indicators.

The integral, solid-state, trip units used on the air circuit breakers are designed primarily for cable and transformer protection. Motors require more precisely set overcurrent devices that prevent motor damage as well as avoiding nuisance tripping. A solid-state relay, Eaton Type C440, provides overload protection and phase unbalance protection. This relay was exclusively designed for motor protection.

Motor Starter

The LV-VSR consists of an Eaton V201 vacuum contactor, Class J current limiting fuses, multi-function motor protective relay, three current transformers and an integral control power transformer.

Vacuum Contactor

Eaton's V201 vacuum contactor is designed for starting and controlling three-phase, 50/60 Hz AC motors. Current interruption is contained within the vacuum bottles and no arc byproducts are vented to the outside environment. Contact condition is given by wear indicators.

Series Current Limiting Fuses

Class J current limiting fuses provide short-circuit protection and allow a combination rating of 100 kA at 480 or 600V.

C440 Electronic Overload Relay

Eaton's C440 multi-function electronic, motor protection relay provides the following features:

- Overload protection, Class 10A, 10, 20 or 30
- Phase unbalance protection, selectable (ON/OFF)
- Ground fault selectable (ON/OFF)
- Remote reset
- Alarm relay output contact
- LED status indication
- Communication modules available

VSR Designs

- Westinghouse DB and DS
- GE
- ITE
- and others

Contact EESS at 877-276-9379 for more details.

Life

Exceptional electrical and mechanical life is offered by the V201 contactor—up to 1,000,000 electrical operations and 2,500,000 mechanical operations, even under harsh conditions.

Drawout Capability

The LV-VSR is mounted on a drawout frame and maintains the safety interlocking system of the low voltage switchgear.

Ease of Installation

The LV-VSR may be inserted into a standard breaker compartment without modification to the compartment. The primary and secondary contact structures and drawout mechanism are identical. The LV-VSR control scheme will interface with standard switchgear wiring with no cell modifications and remote control schemes, if existing, are maintained.

Low Voltage Breaker Drawout Vacuum Starter Replacement

Safety Features

The LV-VSR vacuum starter retains all the safety features of the low voltage switchgear including:

- Racking the LV-VSR vacuum starter is prevented while the contactor is in the closed position. Closing the LV-VSR vacuum starter is prevented while racking
- Breaker position indication is provided (connected, test, disconnect, remove)
- The LV-VSR vacuum starter is padlockable (optional) in either the connect, test or disconnect positions
- Positive ground connection is maintained
- Closed door tripping
- Closed-door control, if existing, can be maintained

LV-VSR Control Features

LV-VSR vacuum starter offers the following standard control features. Other devices can be supplied on request.

- Start–stop pushbuttons
- Eaton C440 electronic overload relay
- Provision for remote control operation
- Custom-designed wiring schemes

Ease of Maintenance

The LV-VSR control components are front-mounted for easy access.

The LV-VSR uses the same line and load finger clusters, secondary contact assemblies and drawout mechanism as the original circuit breaker. Renewal parts are readily available.

Technical Data and Specifications**Ratings**

The LV-VSR vacuum starter is rated as follows:

- Maximum continuous current—425A
- Maximum voltage rating—600V
- Short-circuit rating at 240–600V, 200 kA
- Maximum motor hp at 550/575V, 400 hp
- Maximum motor hp at 440/460V, 300 hp
- Maximum motor hp at 220/230V, 150 hp

Systems Pow-R Breaker (SPB)

SPB-100 Series—3000A

SPB-65 Series—1600A

SPB-50 Series—800A

Product Description

The Cutler-Hammer Systems Pow-R Breaker is an encased power breaker designed to provide benefits of special interest to distribution systems designers.

Systems Pow-R Breakers can be applied as individual breakers in separate enclosures or in switchboards as mains, ties or feeder breakers. They can be applied in low voltage distribution systems through 600 Vac, 50 or 60 Hz. Because they combine high interrupting capacity with short-time delay tripping, Systems Pow-R

Breakers can be applied in fully rated, selective systems while providing full selectivity through the applied breaker's short-time rating.

Both mechanical and electrically operated versions of the breaker feature a true two-step stored energy mechanism with no change in dimensions. This mechanism allows maximum five-cycle closing usually required for generator paralleling.

An interrupting capacity of 150,000A at 480V without fuses and short-time capabilities of up to 85,000A are available. Systems Pow-R Breakers are UL Listed for 100% application.

Systems Pow-R Breakers must be applied within their published ratings in accordance with UL and NEMA Standards defined as "Usual Service Conditions."

Four basic frame sizes (400/800/1200A, 1600/2000A, 2500/3000A and 4000/5000A) cover the continuous ampere range of 100 to 5000A.

The Systems Pow-R Breakers use the proven microprocessor-based trip unit technology that was pioneered by Eaton. Developments in microprocessor technology have given us the new family of Digitrip RMS electronic trip units and the even newer OPTIM programmable trip unit.

All breakers come standard with the Digitrip RMS 510 trip units that have long time and instantaneous (LI) tripping functions. Short-time delay and three- or four-wire ground fault protection can be supplied as optional tripping characteristics, thereby providing for up to nine phase and ground current settings. This provides maximum flexibility in trip curve shaping and system coordination. Any combination of these trip functions (LI, LS, LSI, LIG, LSG or LSIG) can be provided within the Digitrip family of trip units.

Optional trip units such as the Digitrip RMS 610 that has a large four-digit alphanumeric display of load currents, cause of trip and self diagnostics can also be specified. The RMS 810, which in addition to the 610 features, displays and transmits via the IMPACC/PowerNet communications network power and energy values, may also be provided. The RMS 910 also displays power quality data, power factor and phase-to-phase voltages, and transmits waveform capture information.

The most technologically advanced trip unit in the Digitrip family is the Digitrip OPTIM. The OPTIM 750 has features similar to the Digitrip 610 and the OPTIM 1050 has features similar to the Digitrip 910. Both have the additional feature of being programmable, rather than having to be set by discrete switches. This programmability allows for an almost infinite number of trip settings, which in turn provides for even closer system coordination.

All trip units use completely interchangeable rating plugs. These plugs, when applied with the appropriate sensors, give the breakers a tripping range of 100 to 5000A.

The Systems Pow-R Breaker can be supplied in either fixed or drawout mounting configurations. The drawout assembly consists of a stationary frame and a moving carriage with four positions: connected, test, disconnected and fully withdrawn. The fixed configuration can be supplied as either front or rear connected.

The Systems Pow-R Breaker has available a complete family of integrally mounted accessories. Shunt trip, spring release solenoid, undervoltage release, auxiliary switches, key interlocks, mechanical interlocks and covers for the close and/or open pushbuttons are just an example of the accessories that can be mounted on the breaker.

Product History

Since its introduction to the market in 1976, the SPB has provided long and reliable service. Tens of thousands of SPBs have been manufactured and placed into service throughout the world in switchboards, automatic transfer switches and other specialty OEM manufactured power distribution products.

Systems Pow-R Breakers can be identified using two unique numbers. One is the S.O. (shop order number). The shop order number is located either on the breaker's nameplate or on the left side of the breaker.

An example of this number is S.O. 74E2792.01.

The second number is a 30-digit feature and option number. The first 10 characters of the feature and option number are considered to be the feature or style number, the next 20 characters are the option or edge number. This number is also located on the breaker's nameplate or on the left side of the breaker.

An example of this number is:

Feature and option
8702C35G012297240000000
1000144

Feature/style 8702C35G01

Option/edge

Replacement Capabilities

Genuine new SPB replacement parts and accessories, including those listed in SPB Renewal Parts Data RP01301013E, dated February 2006, are available. Contact **1-800-222-9773** for price and availability, or check Vista.

The following parts and accessories are available:

Mechanism and Related Parts

- Charging handle
- Cover assembly
- Mechanism assembly
- Trip unit cover plate assembly

Electrical Attachments

- Shunt trip assembly
- CT ground fault
- Undervoltage release
- Remote time delay
- Auxiliary switch
- Capacitor trip device
- Secondary connectors
- Plate assembly
- T-connectors
- Pressure terminals

Spring Release Solenoid Electrical Operator Breaker Accessories

- Key interlock
- Cover accessories
- Deadfront shield
- Door escutcheon
- Fixed-mounted breakers
- Behind-the-door and through-the-door drawout breakers

Trip Units

- Digitrip 500, 600, 700, 800
- Digitrip 510
- Digitrip 610
- Digitrip 810
- Digitrip 910
- OPTIM 750
- OPTIM 1050
- Pow-R-Trip 7 rating plugs
- Digitrip rating plugs for 500, 600, 700, 800

Technology Upgrades

Upgrade solutions for SPB breakers include trip unit upgrades. These solutions focus on replacing the older technology tripping systems with the latest technology offerings. The latest technology permits significant improvements to be realized in improved coordination and protection, remote metering and monitoring, network communications and energy management information.

Is the old technology breaker still good enough?

That depends on the answers to the following questions.

Can the problem be solved with renewal parts?

Some problems can be solved quickly and simply with the installation of replacement parts and accessories. Eaton continues to manufacture new genuine replacement parts and accessories for SPBs.

Does the breaker reliably perform as expected?

If the breaker does not perform reliably even when properly maintained or serviced, the mechanism or the entire breaker should be considered for replacement.

Does the breaker trip system perform reliably?

Older SPB breakers used trip systems that are no longer being supported by Eaton. Due to changes in the typical distribution system and the addition of numerous harmonic generating loads, some early vintage electronic trip systems could experience unreliable or inaccurate trip behavior. If this is the case, the trip system should be replaced.

Is there a need for energy management?

Breakers with older technology trip systems could not support the demands of energy management. Modern trip systems provide not only improved protection, but energy monitoring, power quality measurement and communications. If any of these are desired, the trip system should be replaced.

Are the recommended maintenance intervals being followed?

There is a tendency to stretch the maintenance interval well beyond the manufacturer's recommendations. This is dangerous. Some studies have shown that if a circuit breaker is left closed for a period of five to seven years, it may not operate as expected when needed to do so.

If the answers to the above questions all indicate that the existing trip system or the circuit breaker does not need to be replaced, then the old technology breaker is still good enough, and maintenance solutions are recommended:

1. Maintain the breaker at one- to two-year intervals using original OEM parts.
2. Use factory authorized service for more extensive repair needs and mechanism replacement.

Eaton can provide loaner breakers to maintain system uptime while the maintenance or factory authorized service is being performed. If any answer to the above questions indicate that the trip system or the circuit breaker should be replaced, then the old technology breaker is no longer good enough, and **Upgrade Solutions** are recommended.

Eaton offers a choice of two upgrade solutions:

1. Trip system retrofit.
2. New SPB breaker.

In summary, how do we choose the right upgrade solution?**Does the breaker perform reliably except for the trip system?**

If “Yes,” then a Trip System Retrofit is the preferred solution.

Does the breaker perform reliably but energy management, power quality measurement or communications are desired?

If “Yes,” then a Trip System Retrofit is still the preferred solution.

Is breaker reliability an issue and will it require extensive service or repairs?

If “Yes,” then a new SPB breaker is the appropriate solution.

See **Pages V12-T17-35** and **V12-T17-36** for information on Digitrip retrofits.

Product Support Services

Factory authorized non-warranty service is available from the Breaker Service Center in Skelton, WV.

The Breaker Service Center can perform:

- All service and testing needs
- Repairs to cracked and broken cases and frames
- Repairs to damaged contact assemblies
- Mechanism replacements
- Trip unit upgrades

The Breaker Service Center also stocks a variety of loaner SPB breakers to keep your customer up and running while their breaker is being serviced.

If you have an opportunity or need further information, call Eaton’s Breaker Service Center at **1-877-275-7782**.

Field Service and Testing (Performed at Customer site):

Provided by Eaton’s Electrical Services & Systems (EESS), Field Service and Testing includes initial inspection, secondary injection testing, service to electrical operators, handles and hub assemblies, installation of most renewal parts, and trip unit upgrades to the Digitrip 510. Contact your local EESS office for more information.

Service and Testing (Performed at local EESS facility):

EESS has a variety of service options for SPB breakers including primary injection testing, mechanism replacement, replacement of key interlocks and ground fault CT, service to finger clusters and stationary contacts, and trip unit upgrades to Digitrip 610/810/910. Contact your local EESS office for more information.

Trip Unit Retrofit Kits

Application Description

Digitrip RMS trip unit retrofit kits are fully engineered, field-installable retrofit kits that enable the user to completely replace an existing tripping system. They are applicable to (600 Vac) low voltage power breakers and are designed for application on various manufacturers' power breakers.

Digitrip RMS trip unit retrofit kits provide true rms sensing, the most accurate and current state-of-the-art technology for measuring amperage loads. True rms sensing removes the possibility of false tripping due to harmonic distortion of the power waveform and enables greater accuracy in selective coordination of the power distribution system. The microprocessor-based Digitrip trip unit also allows communications for remote monitoring to a host computer or local Assemblies Electronic Monitor (AEM) via the Integrated Monitoring Protection and Control Communications (PowerNet) communication system.

Ratings

Digitrip RMS trip unit retrofit kits are available for a wide variety of various manufacturers' low voltage power breaker frames. Ratings range from 100 to 4000A. Multi-tapped CTs, interchangeable rating plugs, programmable pickup and time delay settings provide the user with flexibility.

Product History

Originally a Westinghouse Product

In the past, there have been three types of automatic control for low voltage power breakers: electromechanical trip units, solid-state peak sensing trip units and state-of-the-art true rms sensing trip units.

Electromechanical Trip Units

Electromechanical trip units were initially used in the early 1940s and phased out by all manufacturers in the mid-1970s.

Westinghouse used these trip devices on types DA and DK power circuit breakers. They were also used initially on the DB power circuit breaker. The electromechanical trip units were the conventional form of protection on all manufacturers' breakers, up until the 1970s.

Electromechanical trip units were composed of a solenoid, springs, a diaphragm, seals and air venting apertures. Three trip units were required per breaker. Due to age or harsh environments these devices would fail or lose calibration. They required a great deal of preventative maintenance.

Solid-State Peak Sensing Trip Units

In 1970, the Amptector Trip Unit was introduced as the standard trip unit on the Westinghouse type DS power circuit breaker. The Amptector solid-state trip system provided much greater accuracy and reliability, and included new features like ground fault (G) protection, mode of trip indication and the ability to perform secondary injection testing.

Electromechanical trip devices immediately became obsolete, creating a retrofit market. Amptector retrofit kits were introduced to convert the type DB breakers that had been factory equipped with the electromechanical type trip units.

In 1976, the POW-R-Trip 7 trip unit was introduced on the Westinghouse SPB insulated-case power circuit breaker. A more simplified version with only two trip functions, known as the POW-R-Trip, became available in 1978. Then in 1982, the POW-R Digitrip trip unit became available and was offered on the SPB breakers.

In 1985, RK trip units and retrofit kits were introduced to provide a solid-state trip unit small enough to retrofit General Electric breakers as well as the Westinghouse type DB breakers.

Peak sensing trip units were an improvement and provided improved reliability and accuracy. Only one trip unit was required per breaker; however, peak sensing trip units were not able to handle harmonic conditions. They caused nuisance tripping and unnecessary downtime.

True rms Sensing Trip Units

In 1987, Westinghouse introduced the Digitrip II RMS trip unit (standard version) for use on type DS and SPB power circuit breakers. Digitrip II RMS was the first microprocessor-based true rms sensing trip unit.

True rms trip units enabled the measuring of current rather than the sensing of current.

Because they are microprocessor-based digital devices, they are capable of taking discrete samples of the current waveform in each phase. By applying a mathematical algorithm, the current is accurately mapped out and measured. This method of measurement provides the ability to adapt to a changing harmonic content while providing repeatable and reliable protection.

General Information

State-of-the-Art Features

Digitrip RMS trip unit retrofit kits come in several different model types. Among these types, they provide a variety of accommodating features (see table on **Page V12-T17-20**).

True rms measurement and protection. Extremely accurate and able to compensate for harmonic content and disturbances.

Ground fault may be added to an existing power breaker. Ground fault is offered in a three-wire and a four-wire version.

Zone interlocking is available on the short time and ground fault modes of protection. This enables enhanced selectivity for high fault and ground fault coordination between the main and the feeder breakers.

Local monitoring via a display. A red light emitting diode (LED) display enables the user to step through and read currents and energy readings for each phase and ground.

Communications via the PowerNet system

allows all pertinent information, regarding static and dynamic operation of the breaker, to be remotely monitored either by a host computer or an IQ AEM. This facilitates energy management and power management. Remember, *“If you can’t measure it, you can’t manage it.”*

The Packaged Kit

Each Digitrip RMS trip unit retrofit kit includes a Digitrip trip unit, an auxiliary CT module, a direct trip actuator (DTA), quantity (three) current sensors, a rating plug, interconnecting wiring harnesses, mounting brackets, copper connectors (when required), hardware, and installation instructions. Digitrip RMS retrofit kits are complete tripping systems engineered specifically for each breaker type and frame rating. All kits are designed for field installation.

Application and Service Condition

In order to ensure that Digitrip RMS trip unit retrofit kits are successfully applied, installation must only be done by a qualified individual.

Appropriate testing must be performed to qualify the retrofitted breaker prior to placing the breaker in service. Digitrip RMS trip unit retrofit kits will provide protection based on their published time-current curves when the breaker is properly maintained and operated in accordance with the original manufacturer’s specification and instructions.

Service Life

The physical structure, the bus assemblies and control wiring of switchgear are normally in good condition. The replacement of the trip system coupled along with either refurbishment or reconditioning of the breaker will prolong the life of the switchgear and provide modern state-of-the-art protection.

Availability

Digitrip RMS trip unit retrofit kits are currently available for select breaker frames from the following manufacturers:

- Westinghouse
- General Electric
- ITE
- Allis-Chalmers
- Siemens-Allis
- Federal Pacific
- Roller-Smith
- Other manufacturers

Order Information

In order to obtain the proper kit, the following information should be provided to your authorized Eaton distributor:

- Breaker manufacturer
- Breaker frame designation
- Breaker frame rating
- Breaker continuous current rating
- Kit type (see table on **Page V12-T17-20**) (i.e., RMS 510...RMS 810)
- Modes of protection
- Sensor rating
- Rating plug rating

Definitions of Replacement and Upgrade Capabilities

Replacement Digitrip Trip Units and Rating Plugs

Replacement trip units and rating plugs are available and are used when replacing components with similar functionality and protective features. A complete listing of replacement trip units and rating plugs is found on **Pages V12-T17-21–V12-T17-27**.

Digitrip Trip Unit Upgrades

Trip unit upgrades can be used when upgrading the trip system only requires a change in trip unit with no additional hardware. This option is used to replace an obsolete Digitrip 500/600/700/800 or as outlined in the table below. Use the replacement trip unit and rating plug tables on **Pages V12-T17-21–V12-T17-27**.

Digitrip Trip Unit Upgrades

Digitrip Trip Unit	
Existing	Upgrade
500	510
600	610
700	810/910
800	810/910
810	910

For advanced upgrades requiring more than just a trip unit replacement, a trip unit retrofit kit or upgrade retrofit kit is the correct solution.

Digitrip RMS Trip Unit Retrofit Kits

Digitrip RMS trip unit retrofit kits are fully engineered, field-installable retrofit kits that enable the user to completely retrofit an existing trip system on low voltage power breakers. They are applied on breakers that do not have existing Digitrip trip systems installed. Reference **Pages V12-T17-28–V12-T17-51** for information on retrofit kits.

For breakers previously retrofitted or shipped from the factory with a Digitrip trip system, refer to trip unit and rating plug replacement, Digitrip trip unit upgrades or upgrade retrofit kits.

Upgrade Retrofit Kits

An upgrade retrofit kit is used when upgrading a breaker (previously retrofitted or supplied from the factory with a Digitrip 500/510) to an advanced Digitrip 610/810/910. These are complete kits minus the components common with a basic Digitrip 500/510 retrofit kit. A "U" in the last position of the catalog number denotes an upgrade retrofit kit. Reference **Pages V12-T17-28–V12-T17-51** for information on upgrade retrofit kits.

Arcflash Reduction Maintenance System™

NFPA® 70E-2004 defines flash hazard as: "A dangerous condition associated with the release of energy caused by an electric arc." This is primarily heat energy and may result in serious or life threatening burns.

When properly applied to a power breaker, the Arcflash Reduction Maintenance System reduces fault-clearing time and lowers the available arc flash energy at the connected downstream devices. The result is a reduction of the hazard risk category, allowing for improved personnel safety while eliminating the need for higher levels of costly personal protective equipment (PPE).

The Arcflash Reduction Maintenance System is controlled by a lockable switch that can easily activate a faster tripping time at the work location and be incorporated into a lock-out tag-out (LOTO) procedure. This switch can be applied to any low voltage power breaker by modifying the existing Digitrip trip system, or retrofitting a breaker with a Digitrip retrofit kit (see Accessories table on **Page V12-T17-28**).

For further information, contact your local Eaton's Electrical Services & Systems office (see **Tab 24**), or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Replacement Digitrip RMS Trip Units for Power Circuit Breakers

Replacement Capabilities

Digitrip RMS Trip Units for Power Circuit Breakers

Digitrip RMS Trip Unit Replacement

When a Digitrip RMS trip unit requires replacement, it can be replaced directly using the enclosed charts. Observe the following restrictions:

The group function (G) cannot be added in the field just by changing the trip unit.

Trip Functions

All Digitrip RMS retrofit kit types are available with the necessary combinations of long, short, instantaneous and ground fault (LSIG) modes of protection as depicted and deemed necessary by industry standards.

The combinations of modes of protection are:

- LI
- LSI
- LS
- LIG
- LSG
- LSIG

Rating Plug Replacement

When changing or replacing rating plugs, use the charts provided on **Pages V12-T17-25–V12-T17-27** for DS, SPB and all other retrofitted breakers.

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910. From 1989 to 1996, the standard trip units were the RMS 500/600/700/800. **These trip units are no longer in production.** Replacement orders for the 500/600/700/800 trip units will be filled by the equivalent 510/610/810/910 trip units. Remember, when replacing a 500/600/700/800 unit with a 510/610/810/910, the rating plug must also be replaced.
- ② Rating plugs for the 500/600/700/800 trip units will still be available. **These rating plugs are not interchangeable with the 510/610/810/910 trip units. Likewise, rating plugs for the 510/610/810/910 are not interchangeable with the 500/600/700/800 trip units.**
- ③ There is no direct replacement for Digitrip RMS 700. Use Digitrip RMS 810 or 910.

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910. From 1989 to 1996, the standard trip units were the RMS 500/600/700/800. **These trip units are no longer in production.** Replacement orders for the 500/600/700/800 trip units will be filled by the equivalent 510/610/810/910 trip units. Remember, when replacing a 500/600/700/800 unit with a 510/610/810/910, the rating plug must also be replaced.
- ② Rating plugs for the 500/600/700/800 trip units will still be available. **These rating plugs are not interchangeable with the 510/610/810/910 trip units. Likewise, rating plugs for the 510/610/810/910 are not interchangeable with the 500/600/700/800 trip units.**
- ③ There is no direct replacement for Digitrip RMS 700. Use Digitrip RMS 810 or 910.

Digitrip RMS Rating Plugs

Product Description

SPB Rating Plug and Details

Rating plugs for Digitrip RMS trip units determine the continuous current rating of the circuit breaker. All protection function settings on the face of the trip unit are expressed in per unit multiples of the rating plug ampere rating (I_n).

The rating plug is interlocked with the tripping mechanism to automatically “open” the breaker when the plug is removed. The breaker will remain “trip free” with the plug removed.

SPB rating plugs must be selected to match the desired continuous current rating of the breaker, as well as the frame rating and the system frequency, i.e., 50 or 60 Hz.

DS and retrofit rating plugs must be selected to match the desired continuous current rating of the breaker, the sensor tap setting and the system frequency, i.e., 50 or 60 Hz.

Rating plugs are equipped with a backup battery to maintain the mode of trip operation following a circuit breaker tripping when external power is not available. The battery is a long-life lithium type, which is accessible from the front of the trip unit, without removing the rating plug. Replacement types and instructions are provided in Application Data 33-855.

Following a trip operation and with no supplementary control power available, the battery will maintain the mode of trip LED for approximately 60 hours.

Note: At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910. From 1989 to 1996, the standard trip units were the RMS 500/600/700/800. **These trip units are no longer in production.**

Replacement orders for the 500/600/700/800 trip units will be filled by the equivalent 510/610/810/910 trip units. Remember, when replacing a 500/600/700/800 unit with a 510/610/810/910, the rating plug must also be replaced.

Note: Rating plugs for the 500/600/700/800 trip units will still be available. **These rating plugs are not interchangeable with the 510/610/810/910 trip units. Likewise, rating plugs for the 510/610/810/910 are not interchangeable with the 500/600/700/800 trip units.**

Notes

- ① Choose the rating plug to match the sensor tap selected and the continuous current rating.
- ② When ordering as part of a retrofit kit, refer to **Pages V12-T17-28** through **V12-T17-51**.
- ③ At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910. From 1989 to 1996, the standard trip units were the RMS 500/600/700/800. **These trip units are no longer in production.** Replacement orders for the 500/600/700/800 trip units will be filled by the equivalent 510/610/810/910 trip units. Remember, when replacing a 500/600/700/800 unit with a 510/610/810/910, the rating plug must also be replaced.
- ④ Rating plugs for the 500/600/700/800 trip units will still be available. **These rating plugs are not interchangeable with the 510/610/810/910 trip units. Likewise, rating plugs for the 510/610/810/910 are not interchangeable with the 500/600/700/800 trip units.**
- ⑤ 50 Hz rating plugs are available. Contact your local Eaton Field Sales office for details.
- ⑥ Rating plugs may be ordered separately by above style number or as part of a complete retrofit kit.

Customer Required Information

How to Select a Retrofit Kit

To properly select a retrofit kit, the following information is required:

- Breaker nameplate information
 - Manufacturer
 - Breaker type
 - Ampere frame size
 - Manually or electrically operated
- Drawout or fixed mounting
- Fused or non-fused
- Digitrip trip unit type required
 - 510, 610, 810, 910
- Protective functions required
 - LI, LSI, LS, LIG, LSG, LSIG
- Continuous current rating required (trip rating of breaker)
- Three- or four-wire system (determines number of sensors required)

To properly select options, the following questions need to be answered:

- Will customer supply 120 Vac control power or is breaker-mounted CPT needed?
 - Applies only to Digitrip 610, 810 and 910
- Are zone interlocks required?
- Does the application require relay outputs from the Digitrip 610, 810 or 910 for remote indication?
- Does the breaker have an existing amptector or Digitrip trip unit installed? If so, what is it?

How to Generate a Catalog Number

Refer to **Pages V12-T17-30 to V12-T17-51** to view the retrofit kit catalog numbers for specific breaker manufacturers and frames. When used in conjunction with the information obtained from this page, these pages contain all the information necessary to generate a catalog number.

How to Price a Kit

To correctly price a Low voltage Digitrip retrofit kit, refer to the *Retrofit Kit Product Guide*. This product guide includes base prices, adders and options for all low voltage Digitrip retrofit kits. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Accessories

Description	Catalog Number	Style Number
Auxiliary power module	PRTAAPM	1267C16G01
Amptector and Digitrip test set (tests for both)		8779C02G02
Amptector adapter harness		6503C53G01
Amptector two-piece adapter harness (test set half)		6503C54G01
Amptector two-piece adapter harness (breaker half)		6503C55G01
External harness (zone interlock shorting plug non-DS)		6502C83G01
Simplified cell harness 1 ft		6506C34G01
Simplified cell harness 6 ft		6506C34G02
Simplified cell harness 4 ft		6506C34G03
Arcflash Reduction Maintenance System (ARMS)		
Non-DS		9A10160G01
DS with new Digitrip kit		9A10160G02
DS for existing Digitrip system		9A10160G03

Notes

At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910. From 1989 to 1996, the standard trip units were the RMS 500/600/700/800. **These trip units are no longer in production.** Replacement orders for the 500/600/700/800 trip units will be filled by the equivalent 510/610/810/910 trip units. Remember, when replacing a 500/600/700/800 unit with a 510/610/810/910, the rating plug must also be replaced.

Rating plugs for the 500/600/700/800 trip units will still be available. **These rating plugs are not interchangeable with the 510/610/810/910 trip units. Likewise, rating plugs for the 510/610/810/910 are not interchangeable with the 500/600/700/800 trip units.**

Digitrip RMS Trip Unit Retrofit Kits for Westinghouse DA and DK Breakers

Replacement and Upgrade Capabilities

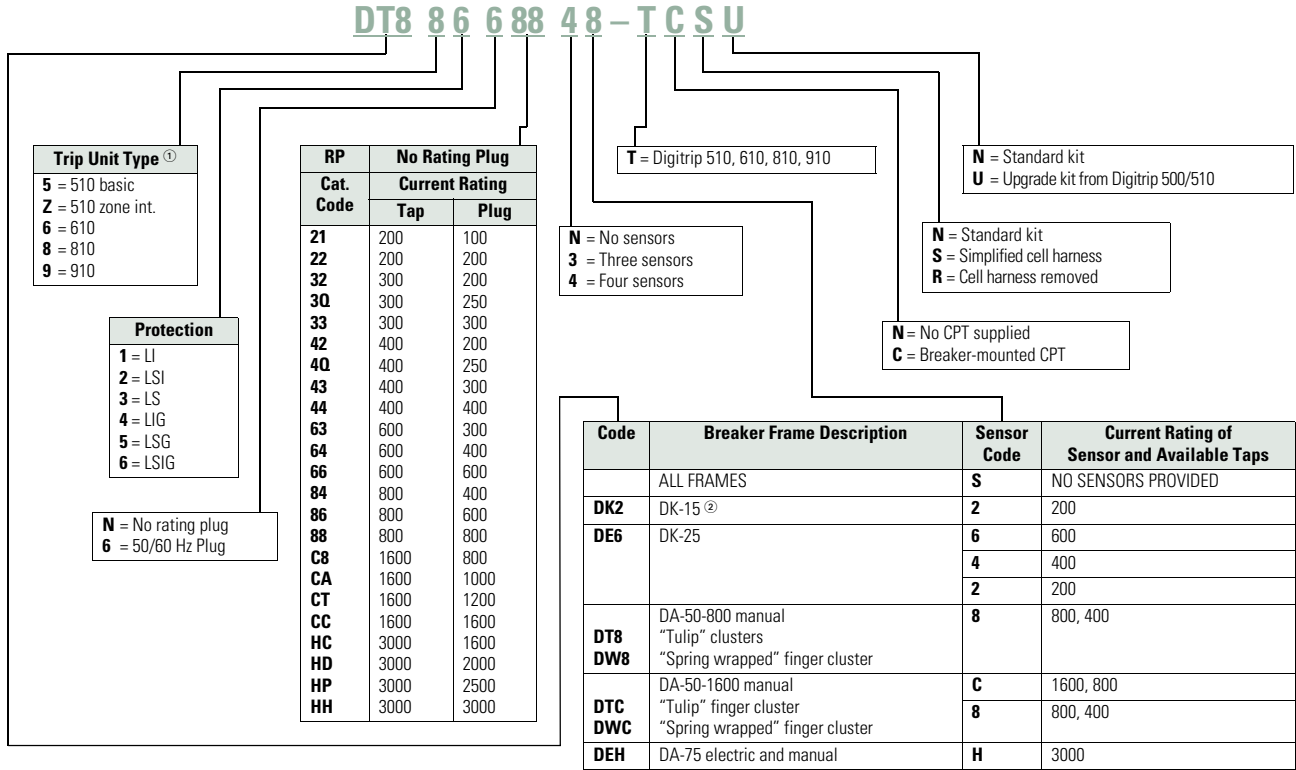

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, create the Digitrip RMS retrofit kit catalog number to match the Westinghouse DA or DK breaker type, retrofit kit type, protection function, rating plug type, current sensor type, CPT, and type of kit required for application. See the example provided on **Page V12-T17-30**.

Application Notes for DA and DK Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip retrofit kit Technical Service Center at **1-800-937-5487**.
3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose quantity four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510 Zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).

Digitrip RMS Retrofit Kits for Westinghouse DA and DK Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Maximum ampere rating is 200A.

Example shown is a Digitrip retrofit kit for a DA-50-800 manual, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 800A for a sensor tap of 800A, four sensors (for a four-wire ground system) that have a sensor tap of 800A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for Westinghouse DB Breakers

DB-25 Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for a DB-25 Power Circuit Breaker

Product Description

Digitrip RMS retrofit kits for Westinghouse DB and DBL power circuit breakers were first introduced in 1989. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on DB breakers with frame ratings from 225A (DB-15) to 4000A (DB-100) as identified below. The rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip RMS retrofit kits and replacement trip units for DB breakers became available around 1989. The Digitrip RMS 510 model is the modern day replacement for the Amptector and RK trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see

Page V12-T17-19.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, create the Digitrip RMS retrofit kit catalog number to match the Westinghouse DB breaker type, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the example provided on **Page V12-T17-32.**

Application Notes for Westinghouse DB and DBL Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.
3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.

4. Type DB-15 and DBL breaker components may have a metal baffle on the inside of the compartment door. If so, the baffle will have to be removed to accommodate the retrofitted DB breaker.
5. Contact your local Eaton office if the existing DB breaker has both an undervoltage trip device (UVTA) and a shunt trip.
6. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose a quantity of four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
7. RMS 510 Zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
8. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).
9. If the existing DB breaker has been retrofitted with an Amptector trip system, and a Digitrip RMS retrofit is desired, contact the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for details.

Digitrip RMS Retrofit Kits for Westinghouse DB Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Maximum ampere rating is 200A.

Sample shown is a Digitrip retrofit kit for a DB-25, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz Plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for Westinghouse DS Breakers

DS Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for a DS Power Circuit Breaker

Product Description

Digitrip RMS retrofit kits for Westinghouse DS and DSL power circuit breakers were first introduced in 1987. For a complete description of the Digitrip RMS Trip System and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on DS breakers with frame ratings from 800A (DS-206) to 4000A (DS-840) as identified below. The rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip RMS retrofit kits and replacement trip units for DS breakers became available around 1987. The Digitrip RMS 510 model is the modern day replacement for the Amptector trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, create the Digitrip RMS retrofit kit catalog number to match the Cutler-Hammer or Westinghouse DS breaker type, retrofit kit type, protection function, rating plug type, current sensor type, CPT, and type of kit required for application. See the example provided on **Page V12-T17-34**.

Application Notes for Cutler-Hammer or Westinghouse DS and DSL Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Eaton Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose quantity four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② If breaker has been previously retrofitted, call the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Sample shown is a Digitrip retrofit kit for a DS-206, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have a sensor tap of 400A, and there are no other features so this is a standard original kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for Westinghouse SPB Breakers

SPB-100 Series—3000A Frame
—Digitrip RMS

Rear View of Plug Adapter Box
and Digitrip RMS 510 (Typical Parts
of Retrofit Kit)

Product Description

Digitrip RMS retrofit kits for Westinghouse SPB power circuit breakers equipped with Pow-R Trip 7 or Pow-R Digitrip trip units were first introduced in 1989. Field retrofits are limited to the RMS 510 model. For a complete description of the Digitrip RMS trip system, see **Page V12-T17-20**.

Ratings

Digitrip RMS 510 retrofit kits are applied on SPB breakers with frame ratings from 400A (SPB-50) to 5000A (SPB-150) as identified on **Page V12-T17-25**. The rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip RMS retrofit kits for SPB breakers became available around 1989. The Digitrip RMS 510 model is the only model that is available. Retrofits are limited to SPB breakers equipped with a Pow-R Trip 7 or Pow-R Digitrip (also known as Digitrip 1) trip units.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, create the Digitrip RMS retrofit kit catalog number to match the Cutler-Hammer or Westinghouse SPB breaker type, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the example provided on **Page V12-T17-36**.

Application Notes for Cutler-Hammer or Westinghouse SPB Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. Only SPB breakers equipped with a Pow-R Trip 7 or Pow-R Digitrip (also known as Digitrip 1) trip units are retrofittable at this time. Breakers equipped with a Pow-R trip cannot be retrofitted.
3. SPB breakers installed in automatic transfer switches and equipped with a bell alarm contact cannot be retrofitted at this time.

4. An automatic trip relay (ATR) is a remote mounted accessory designed to provide visual trip mode indication, alarm and lockout interlocking circuitry following a breaker automatic tripping operation. SPB breakers equipped with Pow-R Trip 7 and this ATR must purchase a separate ATR adapter kit. SPB adapter kit with ground fault: 4A35718G02. SPB adapter kit without ground fault: 4A35718G01.
5. An SPB breaker with a 250A frame rating can not be retrofitted.
6. Ground fault protection cannot be added to the SPB breaker. The breaker must be originally equipped with ground fault protection, for ground fault protection to be selected. Changing the ground fault protection from three-wire to four-wire is not permitted. Interchanging between LI, LS, LSI, LIG, LSG or LSIG is not permitted.
7. SPB breakers equipped with zone interlocking for short time and/or ground fault time delays can be retrofitted, provided that the existing zone interlock configuration is not changed.
8. For Digitrip RMS trip unit replacements, see **Page V12-T17-21**. For Pow-R Trip 7 trip unit replacements, see **Page V12-T17-36**.
9. A factory retrofit is possible for applications requiring Digitrip RMS 610, 810 and 910. Call factory for more information at **1-800-222-9773**.
10. SPB breakers retrofitted with Digitrip RMS can be tested with primary injection testing and trip unit self test. Secondary injection testing is not available.

Digitrip RMS Retrofit Kits for Westinghouse SPB Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Digitrip 610, 810 and 910 are not available for SPB breaker retrofit kits. A factory upgrade program is available. Call factory for more information at **1-800-222-9773**.
- ③ SPB breakers supplied from factory without ground fault (G) cannot be retrofitted in the field to include ground fault.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for Westinghouse DB Breakers

DB-25 Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for a DB-25 Power Circuit Breaker

Product Description

Digitrip RMS retrofit kits for Westinghouse DB and DBL power circuit breakers were first introduced in 1989. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on DB breakers with frame ratings from 225A (DB-15) to 4000A (DB-100) as identified below. The rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip RMS retrofit kits and replacement trip units for DB breakers became available around 1989. The Digitrip RMS 510 model is the modern day replacement for the Amptector and RK trip systems.

Replacement and Upgrade Capabilities

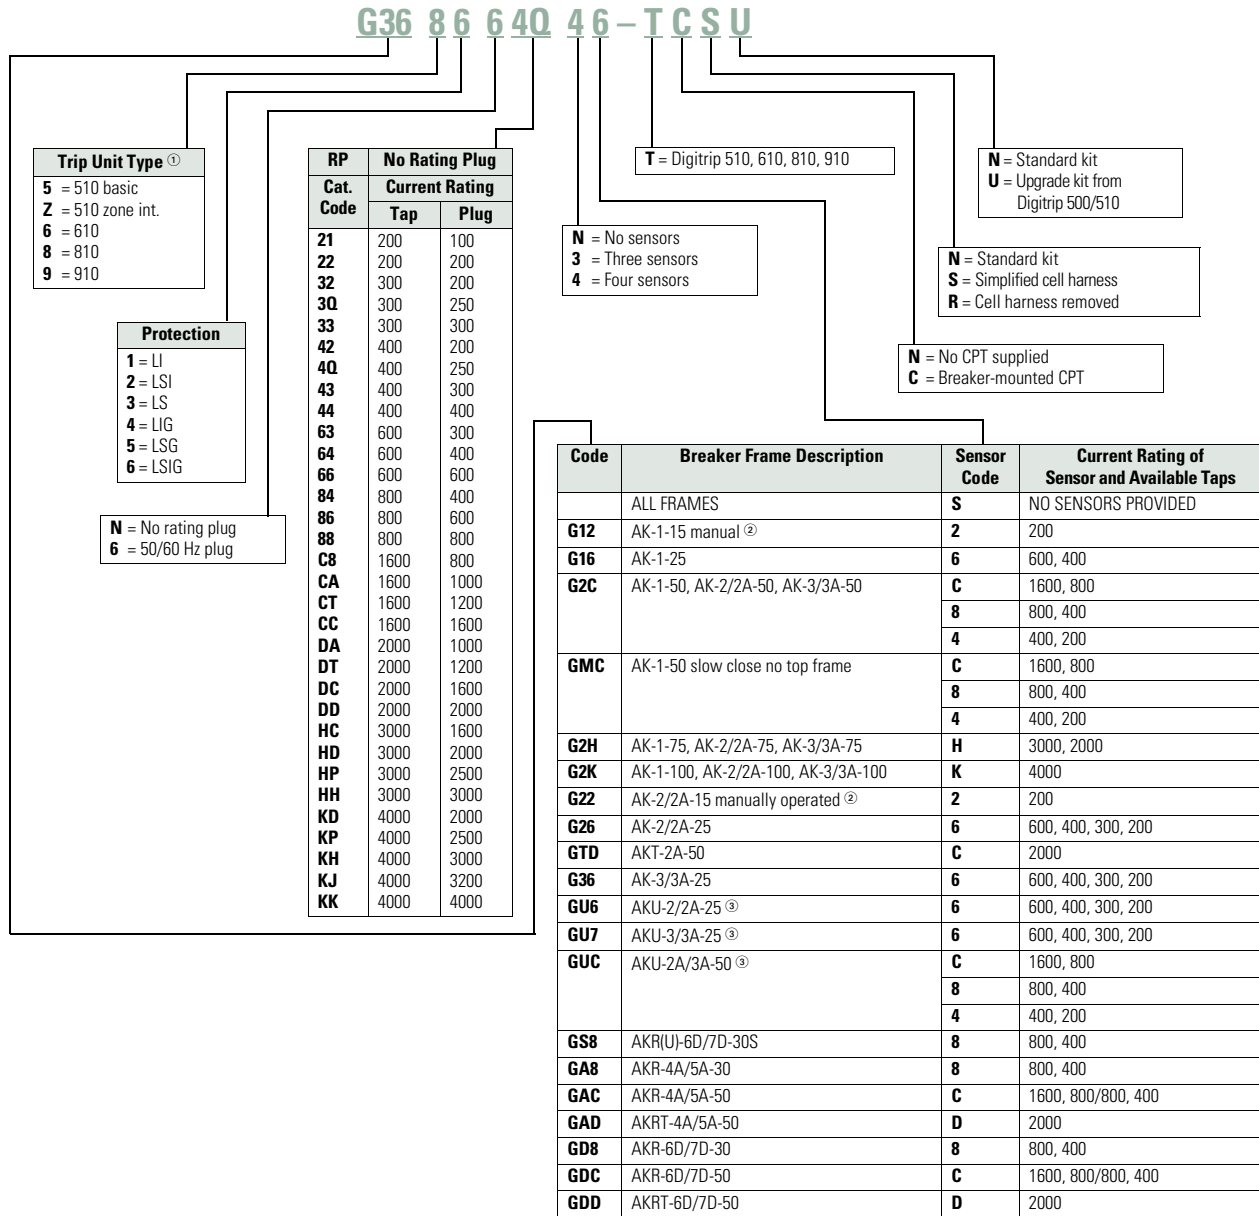

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, create the Digitrip RMS retrofit kit catalog number to match the Westinghouse DB breaker type, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the example provided on **Page V12-T17-32**.

Application Notes for Westinghouse DB and DBL Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.
3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. Type DB-15 and DBL breaker components may have a metal baffle on the inside of the compartment door. If so, the baffle will have to be removed to accommodate the retrofitted DB breaker.
5. Contact your local Eaton office if the existing DB breaker has both an undervoltage trip device (UVTA) and a shunt trip.
6. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose a quantity of four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
7. RMS 510 zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
8. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).
9. If the existing DB breaker has been retrofitted with an Amptector trip system, and a Digitrip RMS retrofit is desired, contact the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for details.

Digitrip RMS Retrofit Kits for General Electric AK Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Maximum ampere rating is 200A.
- ③ Use GU6, GU7, GUC kits only for breakers with top-mounted fuses. For breakers with bottom-mounted fuses, use standard kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

General Electric AL-2-50-75 Breakers—Trip Unit Retrofit Kits

Digitrip RMS Retrofit Kits for General Electric AL-2-50-75 Breakers Catalog Numbering System

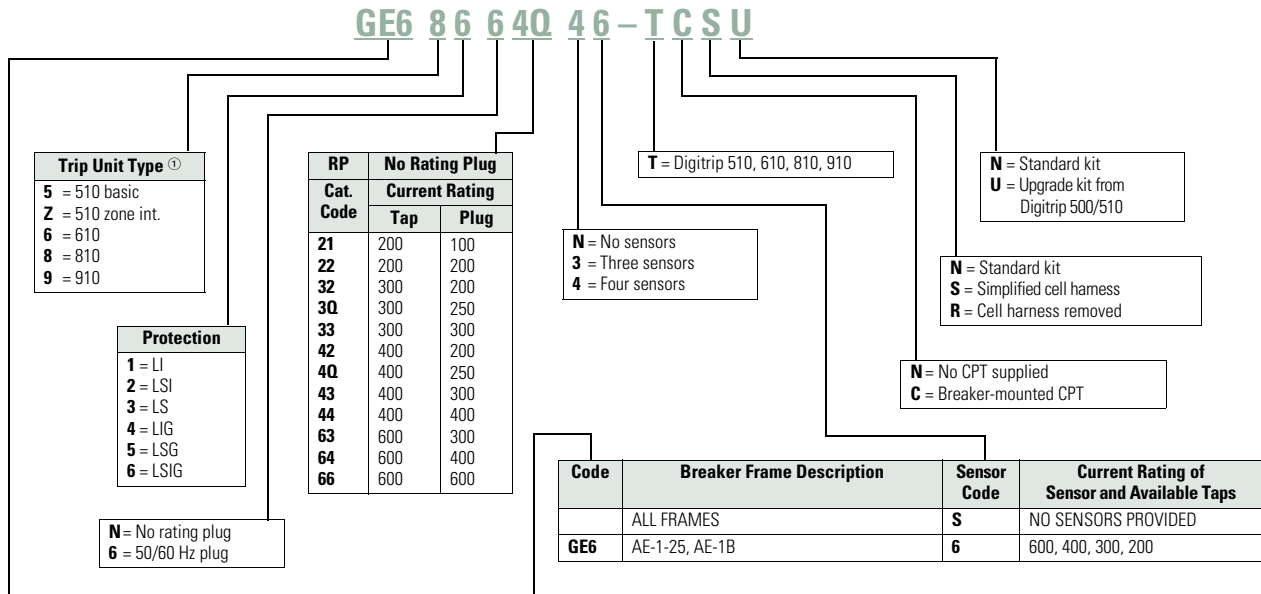

Note

① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.

Sample shown is a Digitrip retrofit kit for an AL-2-50-600 manually operated, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for Other General Electric Breakers Catalog Numbering System

Note

① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.

Sample shown is a Digitrip retrofit kit for an AE-1-25, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for Allis-Chalmers LA Breakers

**Allis-Chalmers LA 600 Gold Breaker
Retrofitted with Digitrip
RMS 810 Retrofit Kit**

**Typical RMS 810 Retrofit Kit
for Allis-Chalmers LA 600
Gold Power Circuit Breaker**

Product Description

Digitrip RMS retrofit kits for Allis-Chalmers LA power circuit breakers were first introduced in 1991. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on Allis-Chalmers breakers from 600A (LA 600) to 3000A (LA 3000). The rating plug and the current sensor act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip RMS retrofit kits and replacement trip units for Allis-Chalmers LA breakers became available in 1991. The Digitrip RMS 510 model is the modern day replacement for electromechanical trip device or peak sensing solid-state trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

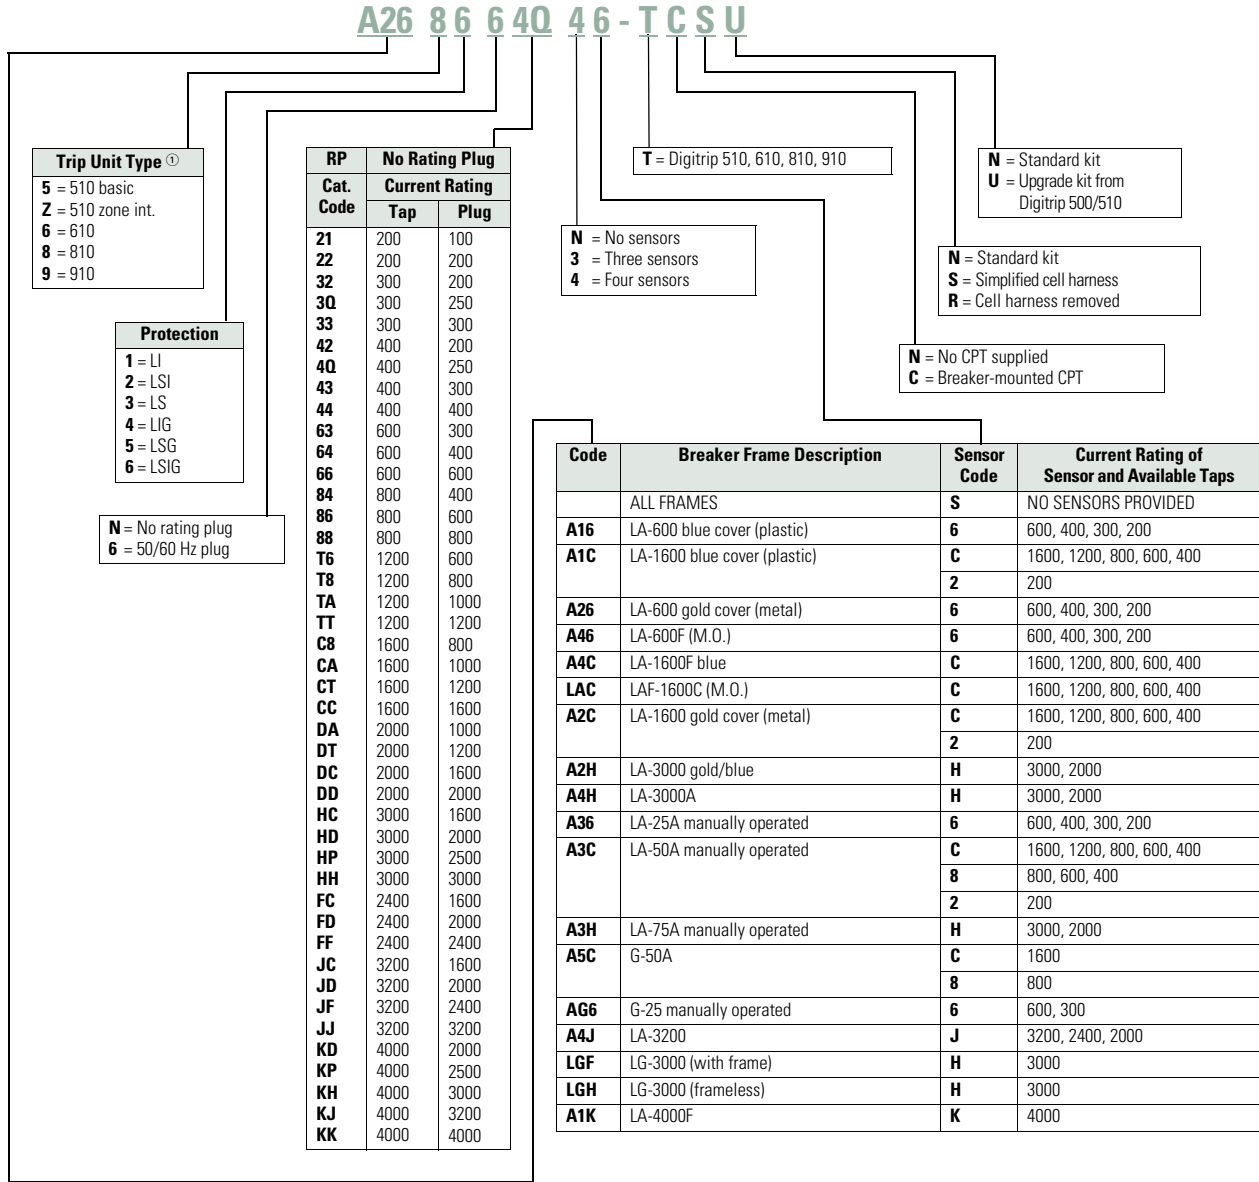

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, choose or create the Digitrip RMS retrofit kit catalog number to match the Allis-Chalmers LA breaker type, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the example provided on **Page V12-T17-42**.

Application Notes for Allis-Chalmers LA Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments (i.e., meters, instruments, control switches, indicating lamps, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose quantity four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510 Zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).
7. Refer all LAF (LA breakers with current limiters) breakers to the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for evaluation.

Digitrip RMS Retrofit Kits for Allis-Chalmers LA Breakers Catalog Numbering System

Note

① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.

Sample shown is a Digitrip retrofit kit for an LA-600 gold, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz Plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip RMS Retrofit Kits for ITE K-Line Breakers

K-1600 Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for ITE K-1600 Power Circuit Breaker

Product Description

Digitrip RMS retrofit kits for ITE K-Line power circuit breakers were first introduced in 1991. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on ITE K-Line breakers from 225A (K-225) to 3000A (K-3000), the rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip RMS retrofit kits and replacement trip units for ITE K-Line breakers became available in 1991. The Digitrip RMS 510 model is the modern day replacement for electromechanical trip device or peak sensing solid-state trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs. Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, choose or create the Digitrip RMS retrofit kit catalog number to match the ITE K-Line and other breaker types, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the examples provided on **Page V12-T17-44**.

Application Notes for ITE K-Line and other Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose quantity four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510 zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).
7. Refer all K-DON Series (K-Line breakers with current limiters) breakers to the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for evaluation.

Digitrip RMS Retrofit Kits for ITE K-Line Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Black and red refer to the color of the back plane insulation material.
- ③ If your breaker is not solid-state, call the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for technical clarification on these kits.

Sample shown is a Digitrip retrofit kit for a K-600 with red back plane insulation, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have a sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was

previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip Retrofit Kits for Other ITE Breakers

KE-4000 Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for ITE KE-4000 Power Circuit Breaker

Product Description

Digitrip retrofit kits for ITE power circuit breakers were first introduced in 1992. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on ITE breakers from 600A (KB-600) to 3000A (KE-4000), the rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip retrofit kits and replacement trip units for ITE breakers became available in 1992. The Digitrip RMS 510 model is the modern day replacement for electromechanical trip device or peak sensing solid-state trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, choose or create the Digitrip RMS retrofit kit catalog number to match the ITE and other breaker types, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the examples provided on **Page V12-T17-46**.

Application Notes for ITE and Other Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose a quantity of four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510 Zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).
7. Refer all ITE breakers with current limiters to the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for evaluation.

Digitrip RMS Retrofit Kits for Other ITE Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Call the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for technical clarification on these kits.

Sample shown is a Digitrip retrofit kit for a KB-600 drawout breaker, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip Retrofit Kits for Siemens and Siemens-Allis Breakers

LAF-800 Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for Siemens-Allis LAF-800 Power Circuit Breaker

Product Description

Digitrip retrofit kits for Siemens and Siemens-Allis power circuit breakers were first introduced in 1993. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on Siemens and Siemens-Allis breakers from 800A (LAF-800) to 4000A (RL-3000), the rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip retrofit kits and replacement trip units for Siemens and Siemens-Allis breakers became available in 1992. The Digitrip RMS 510 model is the modern day replacement for electromechanical trip device or peak sensing solid-state trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, choose or create the Digitrip RMS retrofit kit catalog number to match the Siemens and Siemens-Allis breaker types, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the examples provided on **Page V12-T17-48**.

Application Notes for Siemens and Siemens-Allis Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose a quantity of four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510 zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS Digital displays and communications functions (as applicable).
7. Refer all Siemens and Siemens-Allis breakers with current limiters to the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for evaluation.

Digitrip Retrofit Kits for Siemens and Siemens-Allis Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Call the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for technical clarification on these kits.

Digitrip Retrofit Kits for Federal Pacific Breakers

FPS-75 Breaker Retrofitted with Digitrip RMS 810 Retrofit Kit

Typical Digitrip RMS 810 Retrofit Kit for Federal Pacific FPS-75 Power Circuit Breaker

Product Description

Digitrip RMS retrofit kits for Federal Pacific power circuit breakers were first introduced in 1992. For a complete description of the Digitrip RMS trip system and the features of models RMS 510, 610, 810 and 910, see **Page V12-T17-20**.

Ratings

Digitrip RMS retrofit kits are applied on Federal Pacific breakers from 600A (FP-25) to 3000A (FPS-75), the rating plug and the current sensor rating act in concert to provide for a wide spectrum of overload and short-circuit settings.

Chronology

Digitrip retrofit kits and replacement trip units for Federal Pacific breakers became available in 1992. The Digitrip RMS 510 model is the modern day replacement for electromechanical trip device or peak sensing solid-state trip systems.

Replacement and Upgrade Capabilities

Replacement and upgrade capabilities include replacement Digitrip trip units and rating plugs, Digitrip trip unit upgrades, Digitrip RMS trip unit retrofit kits and upgrade retrofit kits. For definitions of these solutions, see **Page V12-T17-19**.

For Digitrip RMS trip unit retrofit kits and upgrade retrofit kits, choose or create the Digitrip RMS retrofit kit catalog number to match the Federal Pacific breaker types, retrofit kit type, protection function, rating plug type, current sensor type, CPT and type of kit required for application. See the examples provided on **Page V12-T17-50**.

Application Notes for Federal Pacific Power Circuit Breakers

1. Retrofit kits are for use on 50 and 60 Hz distribution systems.
2. All retrofit kits are designed for drawout power circuit breakers only. Refer all fixed-mounted breaker applications to the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

3. The breaker compartment doors on the switchgear assembly must be free of panel-mounted instruments and devices (i.e., ammeters, switches, etc.) or the retrofitted breaker may interfere with these devices when the compartment door is closed.
4. When the ground fault (G) option is selected, please observe the following:
 - a. For three-phase, three-wire solidly grounded systems, choose quantity three current sensors in the catalog number development.
 - b. For three-phase, four-wire solidly grounded systems, choose quantity four current sensors in the catalog number development. Three sensors are mounted on the breaker and one sensor is mounted on the switchgear neutral. Hardware to mount the current sensor on the switchgear neutral and provisions to wire it into the trip unit circuit (including a required pair of breaker secondary disconnecting contacts) are not included in the kit.
5. RMS 510 zone, 610, 810 and 910 retrofit kits include a cell terminal block assembly that must be installed in the switchgear assembly. Internal switchgear wiring to accommodate the customer application schemes must be added in the field.
6. RMS 610, 810 and 910 retrofit kits require a customer supplied 120 Vac source connected to the cell terminal block assembly to power the Digitrip RMS digital displays and communications functions (as applicable).
7. Refer all Federal Pacific breakers with current limiters to the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for evaluation.

Digitrip Retrofit Kits for Federal Pacific Breakers Catalog Numbering System

Notes

- ① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.
- ② Call the Digitrip Retrofit Kit Service Center at **1-800-937-5487** for technical clarification on these kits.

Sample shown is a Digitrip retrofit kit for an FP-25, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

This information is subject to change. Updated pricing and availability information is included in the *Retrofit Kit Product Guide*. For a copy of the *Retrofit Kit Product Guide*, contact your local Eaton Field Sales office or the Digitrip Retrofit Kit Service Center at **1-800-937-5487**.

Digitrip Retrofit Kits for Other Breakers Catalog Numbering System

Note

① At the time of this publication, the standard trip units for low voltage Digitrip retrofit kits are the RMS 510/610/810/910.

Sample shown is a Digitrip Retrofit Kit for an RS-25A, with an RMS 810 trip unit, with LSIG protection, with a 60 Hz plug, rated at 250A for a sensor tap of 400A, four sensors (for a four-wire ground system) that have sensor taps of 600, 400, 300 and 200A, there is a breaker-mounted CPT with the kit, the cell wiring is simplified (only 6 wires vs. 16), and the breaker was previously retrofitted with a Digitrip 500/510, so this is an upgrade kit.

Medium Voltage Metal-Clad—Assemblies and Power Circuit Breakers

Assemblies and Power Circuit Breakers

Originally a Westinghouse Product

Medium Voltage Switchgear Assembly (Type DHP with Drawout Breaker)

Product Description

Medium voltage switchgear serves to channel and switch power in industrial, commercial and utility electrical distribution systems. It is manufactured to industry standards that define the requirements for its ratings, design, construction and testing. ANSI C37.20.2 is the current applicable industry standard for medium voltage metal-clad switchgear, defining the rated maximum voltage range to be from 4.76 kV to 38 kV.

Medium voltage switchgear consists of one or more metal structures that house drawout power circuit breakers, phase bus conductors, auxiliary, control, metering and protective devices. These switchgear components are customized in various combinations during manufacturing to satisfy the application requirements of the switchgear user. Control switches, meters, instruments and protective relays are generally mounted on the switchgear front panels to provide breaker control, metering and circuit protection.

Medium voltage switchgear is typically characterized by metal-clad construction, which means that the switchgear compartments enclosing primary voltage are separated from adjacent compartments by grounded metal barriers.

Product History

In 1939, Westinghouse introduced type DH medium voltage air magnetic power circuit breakers and associated switchgear. Initially, DH breakers were rated up to 5 kV with a maximum interrupting capacity of 150 MVA. Product design enhancements evolved and additional variations of the DH breaker became available. In 1946, the maximum rated voltage of the DH breaker was extended to 15 kV. Eventually, the maximum rated interrupting capacity of the DH breaker reached 1000 MVA.

In 1963, Westinghouse introduced type DHP medium voltage Porcel-line® air magnetic power circuit breakers and associated switchgear with all live parts insulated to ground by high-strength porcelain insulation. Porcelain provided excellent high dielectric, non-tracking, non-combustible, non-hygroscopic and non-aging insulation characteristics. This was a technological improvement over the first DH breakers, which were furnished with a paper phenolic insulation. DHP switchgear was manufactured in ratings from 5 kV, 75 MVA to 15 kV, 1000 MVA. In 1978, Westinghouse introduced the

DVP breaker, the first Westinghouse medium voltage power circuit breaker to use vacuum interrupters. The DVP vacuum breaker was manufactured in 500 and 750 MVA interrupting ratings and was directly interchangeable with DHP air magnetic breakers of the same ratings.

In 1981, Westinghouse introduced VacClad medium voltage metal-clad switchgear with type VCP vacuum power circuit breakers. VCP breakers were furnished with vacuum interrupters, greatly reducing breaker size and weight. The reduced size permitted most breaker ratings to be stacked two-high in the switchgear enclosure, saving on switchgear installation space. VCP breakers included a design improvement called the V-Flex current transfer system, which eliminated the transfer of primary current over a moving hinge or a sliding contact assembly on the breaker. Porcelain insulation was maintained on the breaker elements and in the switchgear, except for the 5 kV switchgear cell insulation that was glass polyester. The switchgear phase bus was insulated with a fluidized bed epoxy insulation system, which was a technological

improvement over the epoxy impregnated kraft paper or noryl sleeving that was used over phase busbars in previous switchgear designs. VacClad switchgear was manufactured in ratings from 5 kV, 250 MVA to 15 kV, 1000 MVA.

In 1986, Westinghouse introduced VacClad-W World-Class medium voltage metal-clad switchgear with type VCP-W vacuum power circuit breakers. VCP-W switchgear included product improvements in manufacturing design and product performance. However, many of the attractive design features of VCP switchgear were maintained, including two-high breaker stacking, V-Flex breaker current transfer and fluidized epoxy insulation on the switchgear phase buses. VCP-W breakers and switchgear were furnished with high-grade glass polyester insulation as standard. Optional insulation upgrades included cycloaliphatic epoxy insulation for breaker element insulation (VCP-WSE breakers) and porcelain insulation for the switchgear cell contact bottles. VacClad-W switchgear is manufactured in ratings from 5 kV, 250 MVA to 15 kV, 1500 MVA to 27 kV and 38 kV, 40 kA.

DH Medium Voltage Metal-Clad—Assemblies and Power Circuit Breakers

DH Switchgear Assemblies and Power Circuit Breakers

Westinghouse DH Drawout Air Magnetic Power Circuit Breaker (Interphase Barrier Removed)

Product Description

Westinghouse DH medium voltage metal-clad switchgear with type DH “DE-ION®” air circuit breakers was introduced in 1939. The drawout breaker element consists of an operating mechanism that drives a set of three-pole units. When the breaker is tripped, the moving and stationary contacts separate. The resulting arc on each phase is drawn up and into the arc chutes, which dissipate the arc through ceramic splitter plates. The de-ionizing interruption process is aided magnetically by the arc chute blow out coil assembly.

DH switchgear was available in indoor and in sheltered aisle and aisle-less outdoor enclosures. DH metal-clad switchgear structure dimensions were standardized, but varied with individual breaker ratings. Widths varied from 20.00 inches for the 50DH75 (1200A) light duty rating, to 26.00 inches for the 50DH250 (1200A) rating, to 36.00 inches for most 2000A and 7.5 and 15 kV ratings.

Ratings

DH switchgear ratings started with the light duty 50DH75 (5 kV, 75 MVA) 1200A breaker. The spectrum of ratings also included 7.5 and 15 kV ratings. The maximum breaker rating produced was the 150DH1000 (15 kV, 1000 MVA) 3000A.

Chronology

DH switchgear was introduced in 1939 and was actively manufactured by Westinghouse in complete switchgear assemblies until the introduction of DHP switchgear in 1963. As production activity tapered after 1963, only match and lineup additions to existing DH switchgear were manufactured along with complete replacement circuit breakers and renewal parts. The last new manufactured DH breakers and switchgear cells were produced in 1983.

Replacement Capabilities

150DH-VR 1200A VR-Series Circuit Breaker

Eaton offers the following to support DH switchgear.

DH-VR Vacuum Replacement Breakers

The DH-VR is a brand new vacuum replacement breaker (VR-Series) for DH air magnetic breakers. The DH-VR breaker permits DH switchgear modernization by using state-of-the-art Eaton VCP-W vacuum breaker technology. The DH-VR is designed, manufactured and tested to applicable IEEE/ANSI standards.

Ratings are available to replace: 5 kV through 15 kV, 50DH150 through 150DH1000, 1200 through 3000A (4000A fan-cooled).

Additional VR-Series breakers are available to upgrade competitors’ air magnetic breakers. See **Pages V12-T17-60 and V12-T17-61**.

SURE CLOSE

All VR Series breakers that are furnished with MOC operators incorporate Eaton’s exclusive *SURE CLOSE* MOC technology. See additional information on **Page V12-T17-62**.

Renewal Parts

Eaton no longer offers new manufactured renewal parts for DH switchgear structures. For DH renewal parts, contact Homewood Products at **412-665-2700**.

Note: New DH factory manufactured switchgear structures and breakers are no longer available.

DHP Switchgear Assemblies and Power Circuit Breakers

Type DHP Drawout Air Magnetic Power Circuit Breaker
(Front Interphase Barrier Removed)

Product Description

Westinghouse DHP medium voltage porcelain metal-clad switchgear with type DHP air magnetic power circuit breakers was introduced in 1963. DHP breakers and switchgear were similar to, but not interchangeable with, the older DH product. DHP was provided with porcelain insulation on all live parts to ground in the switchgear and on the breaker element. DHP switchgear was available in indoor and in sheltered aisle and aisle-less outdoor enclosures.

DHP air magnetic breakers were subject to three major design changes that were phased in during their manufacturing life. The first DHP breakers were furnished with solenoid operated mechanisms with cast parts and monolithic pole units. From 1964 to 1968, the stored energy spring mechanism gradually phased out the solenoid operator. After 1968, cast mechanisms were phased out by fabricated mechanisms. After 1970, monolithic pole units were phased out by the post-insulator pole unit (PIP) design.

DVP vacuum breakers were introduced in 1978. DVP breakers were first generation vacuum breakers that were interchangeable in DHP switchgear with DHP air magnetic breakers of the same ratings.

Ratings

- DHP breakers:
 - 5 kV (75, 250 and 350 MVA)
 - 7.5 kV (500 MVA)
 - 15 kV (500, 750 and 1000 MVA)
- DVP breakers:
 - 7.5 kV (500 MVA)
 - 15 kV (500 and 750 MVA)

Chronology

DHP switchgear was introduced in 1963 and was actively manufactured by Westinghouse in complete switchgear assemblies until 1984.

Replacement Capabilities

DHP-VR VR-Series Circuit Breaker

Eaton offers the following to support DHP switchgear.

DHP-VR Vacuum Replacement Breakers

The DHP-VR is a brand new vacuum replacement breaker (VR-Series) for DHP air magnetic and DVP vacuum breakers. The DHP-VR breaker permits DHP switchgear modernization by using state-of-the-art Cutler-Hammer VCP-W vacuum breaker technology. The DHP-VR is designed, manufactured and tested to applicable IEEE/ANSI standards.

Ratings are available to replace: 5 kV through 15 kV, 50DHP75 through 150DHP1000, 1200–3000A.

Additional VR-Series breakers are available to upgrade competitors' air magnetic breakers. See **Pages V12-T17-60 and V12-T17-61.**

SURE CLOSE

All VR Series breakers that are furnished with MOC operators incorporate Eaton exclusive *SURE CLOSE* MOC technology. See additional information on **Page V12-T17-62.**

Class 1 Reconditioned DHP Breakers and Repair Service

Class 1 Reconditioning of DHP breakers and repair service for DHP breakers are available.

Renewal Parts

Eaton offers an inventory of newly manufactured renewal parts for most DHP switchgear structures and breakers.

Effective 12/17/2002, DHP match and lineup cubicles, DHP air magnetic breakers and arc chutes will no longer be available.

Fluidized Switchgear Bus

Eaton offers new fluidized epoxy bus—insulated bus to replace existing switchgear phase bus insulation. See **Page V12-T17-59.**

VCP VacClad Medium Voltage Metal-Clad—Assemblies and Power Circuit Breakers

VCP VacClad Switchgear Assemblies and Power Circuit Breakers

VacClad Switchgear with Type VCP Drawout Vacuum Power Circuit Breakers

Product Description

Westinghouse VacClad medium voltage metal-clad switchgear with type VCP vacuum power circuit breakers was introduced in 1981. Vacuum interrupter technology provided many advantages over the previous DH and DHP air magnetic breaker designs. Vacuum interrupters permitted the breaker size and weight to be significantly reduced, allowing for two-high stacking construction of most breaker ratings in the switchgear enclosure. VCP breakers withdraw onto switchgear rail assemblies for ease of inspection. Maintenance associated with air magnetic arc chutes was eliminated and contact maintenance was reduced to visual inspection of wear gap indicators.

VCP breakers included a design improvement called the V-Flex current transfer system, which eliminated the transfer of primary current over a moving hinge (like DHP breakers) or a sliding contact assembly (like DVP breakers). Porcelain insulation was maintained on the breaker elements and in the switchgear except for the 5 kV switchgear cell insulation, which was glass polyester as standard. The switchgear phase bus was insulated with a fluidized bed epoxy insulation system, which was a major improvement over the epoxy impregnated kraft paper or noryl that was used as sleeving on phase busbars in previous switchgear designs. VacClad switchgear was manufactured in indoor and in sheltered aisle and aisle-less outdoor enclosures.

Ratings

VCP switchgear provided the first complete line of Westinghouse vacuum breakers in the medium voltage ratings:

- 5 kV (250 and 350 MVA)
- 7.5 kV (500 MVA)
- 15 kV (500, 750 and 1000 MVA)

Chronology

VacClad switchgear was introduced in 1981 and was manufactured by Westinghouse in complete switchgear assemblies until the introduction of VacClad-W switchgear in 1986. Today, many capabilities still exist to support VacClad switchgear.

Replacement Capabilities

Type VCP Vacuum Power Circuit Breaker (Front and Rear Views)

Eaton offers the following to support VacClad switchgear.

Remanufactured VCP Breakers and Factory Repair Service

Factory remanufacturing of VCP breakers and factory repair service for VCP breakers are available.

Renewal Parts

Eaton offers an extensive inventory of newly manufactured renewal parts for VCP switchgear structures and breakers.

Fluidized Switchgear Bus

Eaton offers new fluidized epoxy bus—insulated bus to replace existing switchgear phase bus insulation. See [Page V12-T17-59](#).

VCP-W VacClad Switchgear Assemblies and Power Circuit Breakers

VacClad-W Switchgear with Type VCP-W Drawout Vacuum Power Circuit Breakers

Product Description

VacClad-W world-class medium voltage metal-clad switchgear with type VCP-W vacuum power circuit breakers was introduced by Westinghouse in 1986. VCP-W breakers and switchgear were similar to but not interchangeable with the original VacClad (VCP) product.

The VCP-W design includes a consolidation of improvements in product design and performance that enables the introduction of IEC and 27 kV breaker

ratings. However, VCP-W still includes many of the proven product features of VCP switchgear design, including two-high breaker stacking, V-Flex breaker current transfer and fluidized epoxy insulation on the switchgear phase buses. VCP-W breakers withdraw onto removable switchgear rail assemblies for ease of inspection. VCP-W breakers and switchgear were furnished with high-grade glass polyester insulation as standard. Optional insulation upgrades included cycloaliphatic epoxy insulation for breaker element insulation (VCP-WSE breakers) and porcelain insulation for the switchgear cell contact bottles. VacClad-W switchgear is manufactured in indoor and in outdoor sheltered aisle and aisle-less enclosures. Another option offered for VacClad indoor switchgear is arc-resistance. Eaton was a leader in the development and design of arc-resistant switchgear. Arc-resistant metal-clad switchgear is metal-clad switchgear tested for resistance to the effects of arcing due to an internal fault.

Chronology

VacClad-W switchgear was introduced in 1986 and is the current state-of-the-art Eaton switchgear product. The VCP-WSE breaker with special cycloaliphatic epoxy insulation and the 27 kV VCP-W rating were introduced in 1990. IEC VCP-W ratings were introduced in 1991. 38 kV was introduced in 1995.

Arc-resistant VCP-W switchgear was introduced in 1995.

Replacement Capabilities

Type VCP-W Vacuum Power Circuit Breaker (Front and Rear Views)

Eaton offers the following to support VacClad-W switchgear.

Complete New VacClad-W Switchgear Assemblies

Complete new manufactured VacClad-W switchgear assemblies are available to replace obsolete existing switchgear with new Cutler-Hammer state-of-the-art vacuum switchgear.

VacClad-W Match and Lineup Cubicles

New manufactured VacClad-W switchgear structures to match and line up to existing Westinghouse and Cutler-Hammer VacClad-W switchgear. New VCP-W structures can also connect to existing Westinghouse indoor switchgear (types DH, DHP and VCP) with a transition section.

New VCP-W Vacuum Breakers

Completely new factory manufactured VCP-W vacuum power circuit breakers are available in all published ratings.

Renewal Parts

Eaton offers an extensive inventory of newly manufactured renewal parts for VCP-W switchgear structures and breakers.

Fluidized Switchgear Bus

Eaton offers new fluidized epoxy bus—insulated bus to replace existing switchgear phase bus insulation. See **Page V12-T17-59**.

ANSI and IEC Ratings

ANSI Ratings	IEC Ratings
5 kV (250 and 350 MVA)	3.6 kV (25, 31.5, 40 kA rms SC Make)
7.5 kV (500 MVA)	7.2 kV (25, 31.5, 40 kA rms SC Make)
15 kV (500, 750, 1000 and 1500 MVA)	12 kV (25, 31.5, 40 kA rms SC Make)
27 kV (750, 1000 and 1250 MVA, and 40 kA)	17.5 kV (31.5, 40 kA rms SC Make)
38 kV (16, 21, 25, 31.5 and 40 kA)	24 kV (25 kA rms SC Make)

Technology Upgrades Front Panel Retrofit with IQ Devices and PowerNet Communications

DHP, VCP, VCP-W

New VCW Front Panel with Upgraded Control Devices

Eaton can provide an upgrade to your system by replacing existing analog meters, instruments and protective relays with microprocessor-based solid-state true rms sensing devices. New replacement front panels are available for DHP, VCP and VCW switchgear assemblies, and they can be provided with devices mounted and wired.

Wire markers and wiring diagrams are provided for the hinged panel. The existing panel is removed, the new panel is set in place and the solid-state devices are wired into the switchgear unit.

Fluidized Switchgear Bus

Any Busbar Shape or Configuration is Uniformly Coated. There are No Dielectric Weak Spots and Taping is Not Necessary

Eaton offers a cost-effective program that can extend the life of any manufacturer's equipment by replacing the bus and insulating it with fluidized bed epoxy. The bus insulation in many existing switchgear assemblies may be NORYL®, Micarta®, redacta, heat shrink tubing or fiberglass. These materials are adversely affected by aging, environment and operating conditions. The solution to these concerns can be answered with the high quality, state-of-the-art system and superiority offered by the fluidized bed epoxy process.

Customers can use any of the following services to fit specific switchgear applications from 600V to 38 kV:

- Bus replacement
- Bus duct replacement

Coated Busbars Pass Through a Post-heat Oven to Cure and Fuse the Epoxy

Switchgear Upgrades

DHP, VCP, VCP-W

Switchgear upgrades are available to increase the MVA and continuous current ratings of the entire assembly.

Competitive Upgrades Medium Voltage Vacuum Replacement Breakers

General Electric MagneBlast

**GE-AM13.8-VR VR-Series
Circuit Breaker**

Eaton manufactures an extensive line of VR-Series breakers to replace General Electric MagneBlast air magnetic breakers.

Ratings are available to replace:

- AM4.16 5 kV, 150–350 MVA, 1200–3000A
- AM5 5 kV, 150–250 MVA, 1200 and 2000A
- AM7.2 7.5 kV, 500 MVA, 1200 and 2000A.
- AM7.5 7.5 kV, 250–500 MVA, 1200 and 2000A
- AM13.8 15 kV, 250–1000 MVA, 1200 and 3750A (both short and tall frames)
- AM15 15 kV, 250–750 MVA, 1200 and 2000A

Allis-Chalmers RUPTAIR

MA-VR VR-Series Circuit Breaker

An extensive line of Eaton VR-Series breakers are manufactured to replace Allis-Chalmers RUPTAIR type AM, MA, FA, FB and FC air magnetic breakers.

Ratings are available to replace:

- AM 5 kV, 100–250 MVA, 1200 and 2000A
- MA 5 kV, 150–350 MVA, 1200 and 2000A
- FA 5 kV, 350 MVA, 3000A
- FB 7.5 kV, 500 MVA, 1200 and 2000A
- FC 15 kV, 500–1000 MVA, 1200–3000A

Federal Pacific Electric

DST-2-VR VR-Series Circuit Breaker

An extensive line of Eaton VR-Series breakers are manufactured to replace Federal Pacific Electric air magnetic breakers.

Ratings are available to replace:

- DST 5–15 kV, 150–750 MVA, 1200 and 2000A
- DST-2 5–15 kV, 150 000 MVA, 1200–2000A

SURE CLOSE

All VR-Series breakers that are furnished with MOC operators incorporate Eaton's exclusive *SURE CLOSE* MOC technology. See additional information on **Page V12-T17-62**.

ITE

15HK-VR VR-Series Circuit Breaker

Eaton manufactures an extensive line of VR-Series breakers to replace ITE air magnetic breakers.

Ratings are available to replace:

- 5HV 5 kV, 100–250 MVA, 600–2000A
- 5HK-Model 03, 5 kV, 250–350 MVA, 1200 and 2000A
- 15HK-Model 03, 15 kV, 500–1000 MVA, 1200 and 2000A
- 15VHK-Model 20, 15 kV, 500–750 MVA, 1200A

Medium Voltage Competitive Upgrades—Vacuum Replacement Breakers

McGraw & Edison

**PSD-VR and WSA-VR VR-Series
Circuit Breakers**

An extensive line of Eaton VR-Series breakers are manufactured to replace McGraw-Edison air magnetic breakers.

Ratings are available to replace:

- PSD-15 15 kV, 500–750 MVA, 1200 and 2000A
- WSA-5 5 kV, 250 MVA, 1200 and 2000A
- WSA-15 15 kV, 500–750 MVA, 1200 and 2000A

SURE CLOSE

All VR-Series breakers that are furnished with MOC operators incorporate Eaton's exclusive *SURE CLOSE* MOC technology. See additional information on **Page V12-T17-62**.

Remote Power Racking

Remote Power Racking (RPR-2)

Eaton's remote power racking (RPR-2) unit provides a means of remotely racking most power circuit breakers that use the rotation of a shaft for insertion and removal. Personnel can be up to 25 feet (8m) or more away from the switchgear door during the racking process. This need for distance away from the switchgear is due to safety precautions from potential arc flash occurrences.

Many arc flash incidences with low voltage and medium voltage switchgear occur during the process of inserting and removing (racking) power circuit breakers in switchgear cubicles. Personnel are typically within 2 feet (0.6m) of the front of the power circuit breaker during the racking process and this close proximity to an arc flash can cause serious injury. The best way to limit exposure to arc flash during the process of racking power circuit breakers is to put more distance between the person and the possible point of exposure.

NFPA 70E provides guidance for the requirements of personal protective equipment (PPE) to protect personnel from arc flash exposure. Eaton's RPR-2 allows personnel to wear a lower level of PPE, increasing worker comfort and mobility, while operating the RPR-2 from an increased distance from the power circuit breaker.

The RPR-2 system is the solution that provides the value and the features that customers request.

SURE CLOSE

An Eaton Solution for an Industry-Wide Problem

SURE CLOSE

Background

Mechanism Operated Contacts (MOCs) are external to the breaker (mounted in the switchgear cell) and are driven by the breaker mechanism through a mechanical interface. These contacts are used to provide extra contacts for breaker status and for other control functions. As the circuit breaker closes, an MOC operator causes the MOC switches to operate.

Air-magnetic breakers have massive mechanisms with high forces and inertia. The resultant travel times and the velocities are slow. The figure (A-M) shows the closing curve of a typical air-magnetic breaker and the MOC operator. It closes in approximately 100 msec (a tenth of a second), measured from the time the breaker begins to close.

Problem

A vacuum replacement breaker (VR) is much smaller and lighter than the air-magnetic breaker it replaces. The vacuum contacts move a smaller distance and much faster. When a VR breaker is applied to the cell that originally contained an air-magnetic breaker, the resultant speed of operation of the MOC becomes much faster when it is directly driven by the breaker operating mechanism. The result is higher impact loads and mismatched inertia with the existing switchgear MOC. The effect of the system mismatch is shown in the figure (VR Direct Drive).

When a VR breaker without SURE CLOSE drives the MOC, the breaker and the MOC complete the closing stroke in the same time; 25 msec, versus the 100 msec for the original air-magnetic breaker. Notice the over-travel with the direct drive MOC. The velocity of the MOC system is essentially four times what it is with the air-magnetic breaker. Because kinetic energy (the energy associated with motion) is proportional to the velocity squared, the kinetic energy of the MOC has increased to 16 times that of the original design. This faster operation causes:

- Significant MOC over-travel and bounce
- MOC component wear
- A worn or broken MOC could cause a breaker to stall

Solution

SURE CLOSE is a stored energy device, internal to the breaker, which allows the MOC to open and close independently from the speed of the breaker mechanism and:

- Eliminates the possibility of the MOC stalling the breaker
- Slows down the MOC operation
- Prevents damage to MOC cell components

Conclusion

In the figure below, you can see that the SURE CLOSE MOC drive approximates the original air-magnetic MOC response much better than the VR direct drive. The VR-Series breaker with the SURE CLOSE drive does NOT cause MOC switch contact bounce or abnormal wear.

SURE CLOSE Components

MOC Closing Times—Air-Magnetic, VR without SURE CLOSE and VR with SURE CLOSE

VacClad-W Motorized Remote Racking (VCP-W MR2)

Remote Racking

Product Description

Eaton's VCP-W MR2 motorized remote racking device provides a means of remotely inserting or removing any drawout circuit breaker used in VacClad-W switchgear, to help mitigate arc flash exposure.

The VCP-W MR2 permits the operator to safely move a VCP-W breaker between three pre-determined positions within the circuit breaker compartment. Standing at a safe distance, well outside the arc flash boundary of the equipment, an operator can use remote controls to select disconnect, test or connected positions for the circuit breaker.

The Danger

Electric arcs result from thermal ionization that occurs when current flow is interrupted by the separation of conductors. Thermal ionization can generate temperatures as high as 35,000°F. Conductor materials melt into metal vapor and the surrounding air is ionized.

External arcs create a violent explosion, resulting in an inferno of ionized gases, molten debris, metal shrapnel and a flash of light (an arc flash). Inside a switchgear/switchboard cabinet, an arc event can dislodge compartment doors and turn hardware into high-speed projectiles.

Increased safety precautions and the need to protect personnel from the dangers of potential arc flash occurrences suggest the need to increase the distance between an operator and the front of a switchgear lineup during racking operations.

Features

- Self powered when switchgear is energized
- Provisions energize the system racking motors with an external 120 Vac power source
- Available for all breakers in VacClad-W switchgear
- Factory installed and tested in circuit breaker compartment
- Permanently installed racking motors eliminate the need to lift and manipulate, and align heavy, bulky equipment
- Simple hand-held pendant controller is available with indicating lights to clearly indicate position and status of the circuit breaker
- 25 ft umbilical cord between hand-held controller and circuit breaker compartment

- All circuit breaker safety interlocks remain intact per IEEE C37.20.2
- Logic is built into the device to sense an interference issue
- Logic will not accept a command to connect a circuit breaker that has experienced interference until after it has been moved to the disconnect position
- Controls can be integrated into switchgear secondary control circuits, and/or SCADA systems using Modbus® interface or discrete wiring
- Permissive circuit provision for disabling remote racking until the right system conditions are satisfied
- Pendant will override system when plugged into a specific circuit breaker

Benefits

- Automatic racking reduces installation effort
- Permanently installed system will not get lost between service intervals

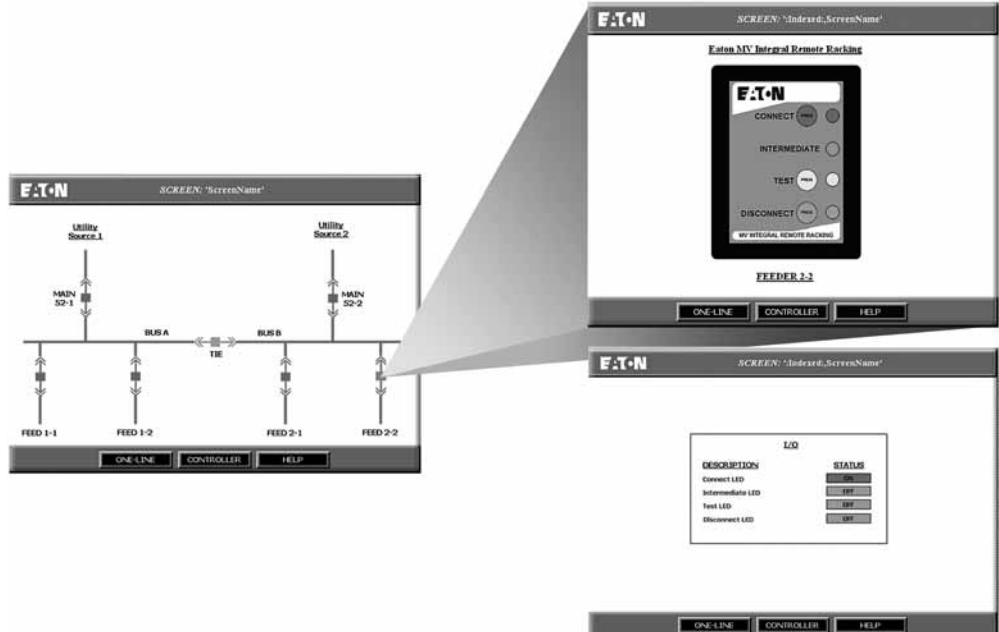

- You do not lose the ability to manually operate your circuit breaker racking mechanism
- Operators can open and disconnect all circuit breakers remotely before entering the equipment room, which ensures no exposure to arc flash energy

Racking Pan

Motor, logic controller and safety interlocks are built into the circuit breaker compartment. System is factory installed and tested with VCP-W circuit breakers. Each switchgear system that is purchased with remote racking capabilities will come with a hand-held pendant for simple operation of a single circuit breaker at a time.

PanelMate® Interface for Integrated Controls

Medium Voltage Metal-Enclosed Load Interrupter Switch Assembly and Switches

WLI Load Interrupter Metal-Enclosed Switchgear

Originally a Westinghouse Product

WLI Design

Standard Manually Operated Fused WLI Switch

- ① Switch position indicator/operator mechanism
- ② Provisions for padlocking door
- ③ Inspection window (4 x 16 inches)
- ④ Full height main door
- ⑤ Door stop, foot operated
- ⑥ Grounded metal safety barrier
- ⑦ Door interlock
- ⑧ Switch interlock
- ⑨ Interphase barrier
- ⑩ Switch operator mechanism access door

Product Description

The WLI (Westinghouse Load Interrupter) medium voltage switchgear is generally composed of a three-phase load interrupter housed in a metal-enclosed structure. The switch is rated for use in four voltage classes: 4 kV, 15 kV, 25 kV and 38 kV. 600A and 1200A current ratings are available. The switch is typically applied in series with three medium voltage fuses on the load side of the switch. WLI switchgear is used for economical protection of unit substation transformers and medium voltage power distribution (via a lineup of these switches). The WLI product line also offered a compact Unitized Power Center (UPC) that used the WLI switch on the primary of the UPC transformer.

LBF and WLI look similar in design. They can be differentiated by the nameplate located behind the operating handle access door. The front is largely covered by the main door, with a 4 x 16-inch viewing window, providing access to the switch and fuse compartment. A smaller access door on the main door allows access to the switch operating mechanism. Upon opening the main door, the switch in the upper part of the structure is covered

by a protective screen barrier that allows visual inspection. The fuses, when provided, are located in the lower part of the structure, and are readily visible for easy maintenance when the main door is open. The rear of the switch structure is generally used for cable entrance and/or exit. Access to the cable entrance/exit area is via a rear cover or door.

The MVS design offers many enhancements over the previous WLI design. A few of the exterior features include a galvanized base and a larger viewing window. Interior features include a hinged barrier, rustproof latches, nylon finned insulators and a switch that is a removable component.

The WVB (Westinghouse Vacuum breaker) switchgear was introduced in 1991, providing a fixed-mounted medium voltage vacuum breaker on the load side of the switch. The medium voltage vacuum breaker was used in lieu of fuses, providing the capability to instantly reset the breaker after a trip condition and the ability to adjust to a wide variety of coordination curves in the field.

The MEB (Metal-Enclosed Breaker) and MSB (Medium Voltage Switch and Breaker) designs replaced the WVB product offering. The MEB

design uses the VCP-TR medium voltage fixed-mounted vacuum breaker. The MSB offering employs a three-phase load interrupter to provide a means to isolate the fixed-mounted breaker.

Product History

Metal-enclosed load break air interrupter switches were first produced in 1952 under the name Load Break Fusible (LBF) at M & R facilities around the country. In 1964, the manufacturing of the product was consolidated in the Cincinnati, OH, facility. The product was discontinued in 1972 and replaced with Westinghouse Load Interrupter (WLI), having many design changes and improvements. Parts for the two products are incompatible, but the WLI design can be added to existing LBF lineups. The WLI product line was moved to the Sumter, SC, manufacturing facility in 1979.

The current MVS design was first introduced in Sumter, SC, in 1999 and built concurrently with the previous design until December 2001. The product line was relocated to Greenwood, SC, in late 2001. As of January 2002, only the current MVS design was manufactured.

WLI/MVS Load Interrupter Switchgear

MVS Design

Standard Manually Operated Fused MVS Improvements

- ① Standard hinged barrier
- ② Larger, lower window (8.00 x 16.00-inch) double viewing area
- ③ Rustproof latches
- ④ Removable switch
- ⑤ Nylon finned insulators
- ⑥ G90 galvanized base

LBF/WLI Product Description

The LBF (load break) switch standard structure was 33.00 inches wide, 90.38 inches high (indoor) and 98.88 inches high (outdoor). The WLI (Load Interrupter) switch structure was offered in both 33.00-inch and 36.00-inch wide enclosures in the 5 kV and 15 kV ratings. Both designs used vertical sections that were freestanding, close coupled to transformers, and bolted together in lineups. Starting in 1984, ANSI 61 light gray was the standard internal and external color for all WLI structures. Prior to 1984, the exterior surfaces of outdoor enclosures were ANSI 24 dark gray. LBF was only offered in the 5 kV and 15 kV voltage ratings. WLI was offered in 5 kV, 15 kV, 25 kV and 38 kV voltage ratings using 600A and 1200A switches.

MVS Product Description

The MVS standard structures for 5 kV and 15 kV gear is 33.00 to 48.00 inches wide, 90.38 inches high (indoor), 98.88 inches high (outdoor), with varying depths. The standard structures for 27 kV and 38 kV gear is 48.00 to 54.00 inches wide, 101.50 or 127.00 inches high (indoor), 110.00 or 135.50 inches high (outdoor), with varying depths. Vertical sections are freestanding, close coupled to transformers and bolted together forming lineups.

Other Replacement Parts

Other replacement parts are available but shall be considered on a job-by-job basis.

Include switch nameplate information located behind the switch operating handle access door with any correspondence. Be sure this includes the "CN" or "SM" number.

Renewal Parts

When ordering parts, specify the part description and mini-MVS switchgear assembly catalog number found on the nameplate.

Enter on Suffix Q50.

Current-Limiting and Expulsion Fuses

Originally a Westinghouse Product

Medium Voltage Fuses

Product Description

Eaton medium voltage fuses offer such a range of characteristics that almost any fuse application, within the practical range of such interrupting devices, may be satisfied. This range of characteristics is offered in part by the production of both expulsion and current-limiting power fuses.

Expulsion and current-limiting fuses provide such diverse characteristics by employing different areas of fuse technology. These differences in technology, along with the diverse characteristics, require that different questions be answered when applying expulsion and current-limiting fuses.

Product History

The Eaton power fuse product line was introduced in the 1930s by Westinghouse Electric Corporation. As power systems grew in size, the need to sectionalize utility feeders and to protect equipment became apparent. The initial fuse development efforts resulted in the creation of non-current-limiting, expulsion type fuses. As the available fault currents grew, the need for a current-limiting fuse was apparent and this resulted in new interruption techniques.

While basic fuse technology has not changed greatly over the years, gradual improvements have been made to make the fuses more current-limiting and easier to manufacture and install. Because standards for fuses (ANSI C37) detail only test methods and basic performance requirements, many different varieties of fuses (length, diameter, short-circuit interruption curves) have been introduced over the years.

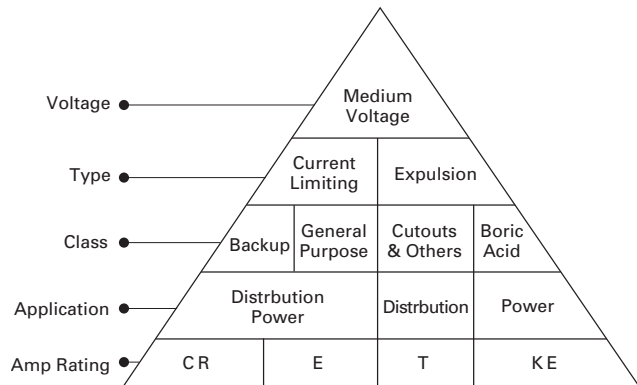

Eaton presently manufactures medium voltage fuses in Haina, DR.

General Information

Fuses in Perspective

Advantages

Medium Voltage Fuse Comparison

Expulsion	Current-Limiting
Vented	Sealed
Electromechanical	Static
Expels gases/noise	No gases/noise
Interrupts at natural current zero	Limits fault current
Generally higher voltage/current applications	Generally higher interrupting ratings
Differences in time/current characteristics	Differences in time/current characteristics

Notes

- ① BAL superseded by CLE.
- ② BAL-R superseded by CLS.
- ③ BA—Refills and holders only, new installations use RBA.
- ④ DBA—Refills only.
- ⑤ DBS—Superseded by DBU.

Guide to Names

BCLS—Bolt-in version of CLS fuse.

BHLE—Bolt-in version of HLE fuse.

CLE—Current-limiting E-rated.

HLE/HCL—Current-limiting E-rated, interchangeable with General Electric and Gould Shawmut.

CX/CXN—Current-limiting interchangeable with McGraw-Edison's NX brand fuses, C-rated.

CLT—Current-limiting transformer fuse.

CLPT—Current-limiting E-rated for potential transformers.

CLS—Current-limiting for motor starters, R-rated.

RBA—Refillable boric acid expulsion fuse (indoor use).

RDB—Refillable dropout boric acid expulsion fuse (outdoor use).

DBU—Dropout boric acid fuse interchangeable with S&C's SMU-20 refill.

Guide to Ampere Ratings

"E" Designation

Fuse rated 100E or below will melt in 300 seconds at a current value between 2.0 and 2.4 times the E number.

Fuse rated above 100E will melt in 600 seconds at a current value between 2.2 and 2.64 times the E number.

If the current is higher than 2.4 or 2.64 times the E number, the user must consult the time-current curves for that particular fuse.

"R" Designation

The fuse will melt in 15 to 35 seconds when the current equals 100 times the R number.

If the current is higher than 100 times the R number, the user must consult the time-current curves for that fuse.

"C" Designation

The fuse will melt in 1000 seconds at a current value, between 1.7 and 2.4 times the C number.

If the current is higher than 2.4 times the C number, the user must consult the time-current curves for that particular fuse.

"A" Designation

Fuses that do not comply with "E," "R" or "C" designations.

Expulsion fuses can also be E-rated, K-rated and T-rated, and are also covered in the ANSI standards. The K and T ratings refer, respectively, to relatively "fast" and "slow" melting expulsion fuses. Detailed time-current tables adequately define these ratings.

CLE and HLE Current-Limiting—E-Rated

CLPT Current-Limiting E-Rated for Potential Transformer Protection

CLS Current-Limiting for Motor Starter

CX Current-Limiting—Interchangeable with McGraw Edison's NX Type

CLT Current-Limiting for Transformer Protection

Product Description

Current-limiting fuses are constructed with pure silver fuse elements, a high-purity silica sand filler, a specially designed core and a glass resin outer casing.

A high fault current melts the silver element almost instantly and loses energy to the surrounding sand. The sand melts and forms fulgurite, a glass-like substance.

The arc voltage rapidly increases to nearly three times the fuse voltage rating and forces the current to zero. Low fault current melts a solder drop on the silver fuse element that, in turn, melts the silver.

The element burns back until there is a sufficient internal gap to interrupt the current. This is known as the M-effect.

Eaton current-limiting fuses are offered in two basic types: backup and general purpose. Backup fuses have a published minimum interrupting current and require a series device for breaking the circuit for currents below this minimum level. General purpose fuses have improved low current interruption capability and are designed to interrupt low fault currents that cause the fuse to melt in one hour or less.

General Information

Applications

Current-limiting technologies can be used to meet almost every fuse application. Typical applications for utility, industrial, construction and OEM customers include:

- Feeder circuit sectionalizing
- Power transformers
- Substation service transformers
- Underground distribution transformers
- Pole-mounted transformers
- Pad-mounted distribution transformers
- Fused switches
- DIP poles
- Motor starters
- Potential transformers
- Substation capacitor banks

Accessories

A wide assortment of mountings, live parts and end fittings are available to facilitate power fuse installation.

Mountings include a base, porcelain or glass polyester insulators and live parts. They help enable the fuse to be safely attached to the gear. Mountings can be either disconnect or nondisconnect.

Live Parts attach the fuse to the mountings and are considered part of the mounting. All parts above the insulators are live parts.

Live Parts

End Fittings are metal parts that attach to each end of the fuse at the ferrules. They are used only on disconnect fuses or when converting a nondisconnect to a disconnect fuse.

Expulsion Fuses

RBA—Refillable Boric Acid

RDB—Refillable Dropout Boric Acid

**DBU—Dropout Boric Acid—
Interchangeable with S&C's SMU-20**

Product Description

Eaton expulsion fuses use boric acid as the interrupting medium. Under a fault condition, arc heat decomposes the boric acid, which produces gases and boric anhydride. The water vapor blast extinguishes the arc in a deionizing action and exits from the bottom of the fuse.

Type RBA indoor expulsion fuses are fitted with a filter or condenser that moderates the discharge exhaust. The discharge filter limits the exhaust to a small and relatively inert amount of gas and lowers the noise level without affecting the fuse interrupting rating. Steam discharge, that can affect the interrupting, is fully restricted by the condenser.

Each type RDB outdoor dropout fuse includes an ejector pin that is forced through the top of the fuse. The ejector pin releases a latch on the mounting and the fuseholder is kicked outward and swings into the dropout position, through 180° with a vertical mounting, or 90° with an underslug mounting.

Refill units can be field installed into RBA and RDB expulsion fuses. Once the old unit has been removed, the separately purchased unit can be easily installed into the fuse holder.

General Information

Applications

Expulsion technologies can be used to meet a number of fuse applications. Typical applications for utility, industrial construction and OEM customers include:

- Feeder circuit sectionalizing
- Fused switches
- Power transformers
- Substation service transformers
- DIP poles
- Potential transformers
- Substation capacitor banks

Accessories

The following accessories are available for expulsion fuses:

Mountings include a base, porcelain or glass polyester insulators and live parts. They help enable the fuse to be safely attached to the gear. Mountings can be either disconnect, nondisconnect or dropout. Fuses may be vertical or underhung.

Live Parts attach the fuse to the mountings and are considered part of the mounting. All parts above the insulators are live parts.

End Fittings must be mounted on DBU fuse units to enable them to be fitted into the mounting.

Filters and Condensers are for indoor applications of RBA expulsion fuses. They confine the arc within the fuse and substantially reduce the noise and exhaust when the fuse interrupts.

Mufflers are used with DBU fuses in indoor applications to virtually eliminate offensive noise and exhaust gases when the fuse interrupts.

Product Selection

Easy to Use, Easy to Order!

Eaton's fuse catalog numbering system makes it easy to order the right fuse. The catalog numbers are easy to remember, unique to each fuse, and are broken down in three descriptive segments: fuse type, voltage rating and current rating.

These catalog numbers can be entered directly and easily:

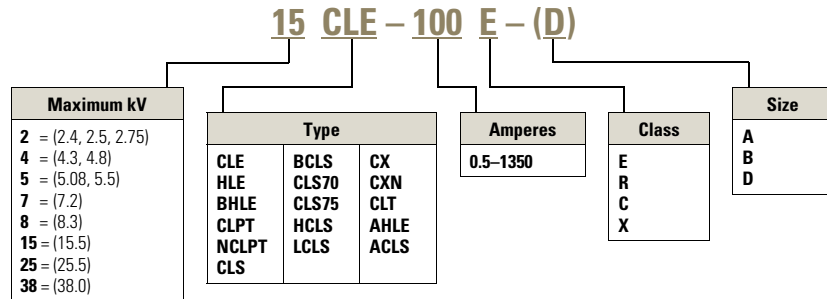

- No change in order processing will occur if you use either a style number or its corresponding catalog number. You will get the same fuse
- In the back of this ordering guide is a style number to catalog number cross-reference chart

Current-Limiting Fuse Examples

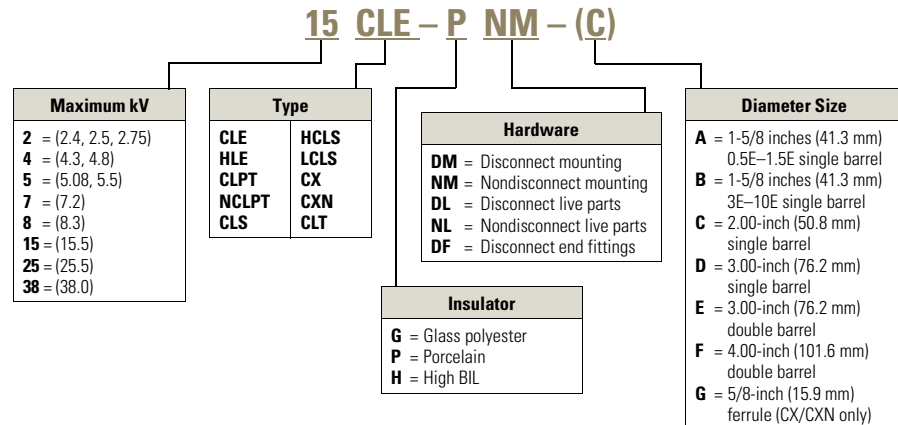

- **5CLE-30E**
5.5 max. kV, CLE fuse unit, 30E amperes
- **15CXN-45C**
15.5 max. kV, CXN fuse unit, 45C amperes
- **5CLS-GDM-E**
5.5 max. kV, CLS fuse unit, glass polyester nondisconnect mounting
- **CLE-DL-D**
CLE, disconnect live parts, size D

Network Protectors

Originally a Westinghouse Product

CM-22

CMD

CM52

Product Description

Cutler-Hammer® network protectors from Eaton's electrical business are special self-contained air breaker units having a full complement of current, potential and control transformers, as well as relay functions. The network protector enables the paralleling of two or more primary feeders on the same low voltage bus. They are available for transformer mounting in submersible or non-submersible housings, or suitable for mounting within a low voltage switchgear assembly. The protective relay automatically closes the

protector if power flow is forwarded into the collector bus. It also trips the protector upon flow of reverse fault or magnetizing currents.

Product History

The network protector product line began manufacturing in 1922 under the name of Westinghouse Electric and Manufacturing Company. Over the years a number of different production models were produced. The most widely installed model is the type CM-22, which was first marketed in 1934 and is still manufactured today.

New production CM-22, CMD, CMR-8 and CM52 units are available from the Greenwood, SC, facility. Renewal parts are also available for these units.

The old type electromechanical relays which have a large installed base, are field replaceable with the current solid-state Type MPCV relays.

Eaton has also developed parts and relays to support old style GE Type MG-8 and MG-9 network protectors. GE discontinued the manufacture of these products in 1996.

Replacement Capabilities

New

Several current Cutler-Hammer production designs of network protectors are available:

- CM52
- CMD
- CMR-8
- CM-22

Retro-Build

Retro-building is a complete reworking of all the major components of a network protector including preliminary inspection, rebuilding, and re-testing equipment. Included in the process: removing all asbestos materials (where applicable), applying a new wiring harness, rebuilding the complete mechanism with motor and shunt trip, replacing the relay panel and completely reconditioning any enclosure. Modern components change the “as built” vintage to current production designs.

Cutler-Hammer and Westinghouse

- CM-22
- CMD
- CMR-8

General Electric®

- MG-8
- MG-9

Retrofit

General Electric MG-8 and MG-9 network protectors up to 2000A are retrofittable with a new CM52 roll-in replacement breaker. This retrofitting option uses existing enclosures and bus, replacing the remaining with the most recent technology of the CM52.

CMD style network protectors are retrofittable with a new CM52 drawout circuit breaker and is available for all ampere ratings and voltages.

Contact the Network Protector Group for additional information and availability at **1-800-525-6821** or **1-877-737-8328**.

Technology Upgrades—Relays

Electromechanical and older solid-state relays can be replaced with new micro-processor MPCV designs.

The MPCV network relay can be field installed into ANY network protector regardless of the age or the manufacturer. Field installation is accomplished without breaker modification or any rewiring of the breaker control harness.

Communications Capability

The MPCV relay has the capability of communicating information over a wide range of media.

Hardwire (fiber or twisted pair), wireless (cellular or radio) are options available using Eaton’s VaultGard Communication platform. This system provides data for extensive engineering analysis, vault diagnostics, preventive maintenance and additionally provides DNP 3.0 objects direct to a SCADA system.

Parts

Eaton offers an extensive inventory of newly manufactured renewal parts for the following network protectors:

Cutler-Hammer and Westinghouse

- CM-22
- CMD
- CMR-8
- CM52

General Electric

- MG-8
- MG-9

Test Sets

HWT-500 Test Kit

The HWT-500 test kit is offered to provide complete testing capabilities for

network protectors with 208 through 480V delta or wye connected systems. This is supplied in a rugged, wheeled case with retractable handle.

Training

The product line offers the following network protector training seminars:

- **Safety and Maintenance Seminar**—This two-day seminar covers fundamentals of network systems, network relay history and theory and maintenance overview of the CM-22, CMD, CM52 and MPCV relay
- **Troubleshooting Network Protector Seminar**—This three-day seminar encompasses all material included in the safety and maintenance seminar and also covers the GE network protectors. A combination of classroom and hands-on troubleshooting are provided

Automatic Transfer Switches

Automatic Transfer Switch Family

Product Description

Eaton's Cutler-Hammer® automatic transfer switches are reliable, rugged, versatile and compact assemblies for transferring essential loads and electrical distribution systems from one power source to another.

Product History

A transfer switch is a critical component of any emergency or standby power system. When the normal (preferred) source of power is lost, a transfer switch quickly and safely shifts the load circuit from the normal source of power to the emergency (alternate) source of power. This permits critical loads to continue running with minimal or no outage. After the normal source of power has been restored, the re-transfer process returns the load circuit to the normal power source.

Eaton is one of the pioneering electrical manufacturers and has been focused on providing reliable backup power systems with transfer switch equipment for over 75 years. The automatic transfer switches provide a safe and reliable means to automatically start your generator, and transfer loads to a standby power source when normal power is available. Eaton offers three reliable and sophisticated transfer switch options for you to choose from—contactor-based, molded-case and circuit breaker style switches.

Power Factor Correction Capacitors

UNIPAK and AUTOVAR

Product Description

Power factor correction capacitors and harmonic filters are an essential part of modern electric power systems. Power factor correction capacitors are the simplest and most economical means of increasing the transmission capacity of a power system, minimizing energy losses and correcting load power factor. In addition, power factor penalties can be reduced and power quality can be greatly enhanced.

There are two main reasons to correct poor power factor. The first is to reduce or eliminate a power factor penalty charged by your local utility. Another reason is that your existing transformer is, or shortly will be, at full capacity and installing power factor correction capacitors can be a very cost-effective solution to installing a brand new service.

Depending on the amount of power factor correction (amount of kVAR required for the electrical system to improve the power factor) and the dynamic nature of the load, a fixed or switched capacitor bank may be the best solution. When capacity becomes a problem, the choice of a solution will be dependent upon the size of the increase needed. Like all power quality solutions, there are many factors that need to be considered when determining which solution will be best to solve your power factor problem.

Harmonic Filtering

As the world becomes more dependent on electric and electronic equipment, the likelihood that the negative impact of harmonic distortion increases dramatically. The efficiency and productivity gains from these increasingly sophisticated pieces of equipment have a negative side effect—increased harmonic distortion in the power lines. The difficult thing about harmonic distortion is determining the cause. Once this has been determined, the solution can be easy. Passive harmonic filtering equipment will mitigate specific harmonic issues, and correct poor power factor as well.

Product History

Eaton's Cutler-Hammer® power factor correction product line began as Sprague Electric in Massachusetts in 1942. They were the first manufacturers of dry capacitor cells in the United States. Throughout the next 40 years, they manufactured capacitors in both the dry and oil-filled designs.

In 1986, the company was purchased and renamed Commonwealth Sprague. Eaton's Cutler-Hammer Power Quality Division began a name brand relationship with Commonwealth Sprague in 2001, and purchased the Commonwealth Sprague capacitor systems business in 2003. At that time, manufacturing was moved to the Asheville, NC, manufacturing plant.

Replacement Capabilities

Capacitor Cells—Dry-Type

- **Terminals:** Threaded for secure connection, all sizes. 10 kVAC stand-off terminal bushings. Rated for 30 kV BIL
- **Dielectric fill:** Thermosetting polymer resin
 - Flash point: +415°F (+212°C)
 - Fire point: +500°F (+260°C)
- **Dielectric film:** Self-healing metallized polypropylene. Losses less than 1/2 watt per kVAR
- **Pressure-sensitive interrupter:** Built-in, three-phase interrupter design. UL® Recognized. Removes capacitor from line before internal pressures can cause case rupture
- **Discharge resistors:** Reduce residual voltage to less than 50V within one minute of deenergization. Mounted on terminal stud assemblies. Selected for 20-year nominal life. Exceeds NEC® requirements
- **Capacitor operating temperature:** -40°F (-40°C) to +115°F (+46°C)

Notes

- ① kVAR rating standard. NEMA® kVAR tolerance is +15%–0%.
- ② Catalog number as shown is for three-phase units.

Dry-type. Thermoplastic encapsulation medium. On all units, customer must provide overcurrent protection as tabulated or equivalent (fuse interruption rating shall be

100,000A or greater). All units supplied unpainted. Case material terne plate steel approximately 0.017 thick.

Technology Upgrades **UNIPAK**

UNIPAK

Fixed power factor correction for retrofit and upgrades. Units are available in 240–600V and 1–400 kVAR ratings for retail, commercial and industrial applications for single point correction. Units can also be configured to include harmonic filters in order to reduce harmonics in applications with large amounts of nonlinear loads, such as variable speed drives. They are most commonly applied to low voltage motors, motor control centers and incoming switchboards.

UNIPUMP

UNIPUMP

Fixed power factor correction for retrofit or upgrade of indoor or outdoor pump motor applications. Units are available in 240–600V and 2–20 kVAR ratings. Units include mounting brackets and a 4-foot flexible power cable attached for simple mounting and connection.

AUTOVAR

AUTOVAR 300

AUTOVAR 600

Switched power factor correction for retrofit or upgrade at the substation of facility level. An intelligent controller senses the customer's current power factor, and automatically steps on and off stages of capacitance in order to achieve the customer's programmed target power factor. Units are available in 240–600V and 25–840 kVAR ratings in wall and floor-mount designs. Higher ratings are available—contact the factory for assistance. Units can also be configured to include harmonic filters in order to reduce harmonics in applications with large amounts of nonlinear loads, such as variable speed drives.

Harmonic Correction Unit

Harmonic Correction Units

Active harmonic filters provide active harmonic control. The active harmonic filter will monitor the distorted electrical signal, determine the frequency and magnitude of the harmonic content, and then cancel those harmonics with the dynamic injection of opposing current. Active harmonic control provides the benefit of traditional passive filters with simpler engineering requirements, easier and less expensive installation, comprehensive control, and assured compliance with the IEEE® 519-1992 standard.

Medium Voltage UNIVAR and AUTOVAR

Metal-Enclosed Medium Voltage Power Factor Correction System

UNIVAR Fixed Medium Voltage PFC Unit

Eaton's Cutler-Hammer metal-enclosed medium voltage capacitor, systems and harmonic filters are designed for indoor or outdoor commercial, industrial and utility power systems requiring motor start support, power factor correction, harmonic filtering, IEEE 519 compliance and increased system capacity. Fixed motor start capacitors are available to assist in motor starting applications. Engineered designs are available with a host of options and accessories to fit the requirements and the desired configurations of virtually any installation. Single-stage and multi-stage, tuned or de-tuned filter banks can be supplied. Metal-enclosed medium voltage capacitor banks are designed for industrial, commercial and utility power systems involving motors, feeder circuits, and transmission and distribution lines where power factor improvement is required.

Solving the Operating Performance Puzzle

As electrical equipment and systems become increasingly sophisticated and complex, so too does the challenge of maintaining peak levels of availability, performance, security and protection.

Eaton's Electrical Services & Systems (EESS) recognizes that superior hardware is only part of the answer. Effective power strategies require intelligent system design, integration, coordination and control. That means working with a dedicated service partner who understands on-site and remote access diagnostics, installation, modernization and predictive maintenance. Whether it's a single power strategy application or a total Integrated Project Solution, EESS has the method by which to enhance power performance, to reduce operating costs and to maximize the reliability, safety and integrity of your electrical equipment and system assets.

Uptime

Reliability

EESS is a one-stop service provider focused on integrating and maintaining power quality. In addition to complying with IEEE® and ANSI standards, many EESS engineers and technicians are 1E-certified to perform a full scope of on-site service operations in nuclear plants, including hardware retrofits.

EESS offers intelligent solutions for maximizing operating performance. Some of these solutions include:

Power Equipment Services

Critical electrical equipment requires systematic maintenance to ensure maximum performance and in-service life... while minimizing unscheduled downtime, aging, wear related hazards and total operating costs.

EESS is the ideal complement to your existing in-house service. For more complex projects, they can act as a single point outsource for all of your facility's ongoing maintenance needs, including:

- **Installation/Startup**
EESS can install any make or manufacturer of power equipment to precise vendor specifications, with minimal disruption of ongoing facility operations
- **Routine/Emergency Service**
EESS is on call 24/7, providing an unrivaled array of services, including disaster recovery and crisis response. One call to **1-800-498-2678**, and uptime engineers and technicians can be assembled with the sole purpose of bringing electrical systems back online quickly

- **Warranty Service**
EESS delivers a new level of confidence to customers by adding an additional one-year warranty extension to the Eaton products they install
- **Strategic Alliances**
because Eaton is truly universal in presence, scope and capability, EESS offers exceptional partnership opportunities to customers who operate multiple facilities on a regional, national or international level. As a dedicated service extension, EESS can establish and maintain consistent levels of availability, reliability and performance across your operation. Additionally, EESS can create uniform methods and procedures for performance benchmarking, predictive maintenance programs, inventory management and an array of other services designed to help maximize your investment

Life Extension

PowerChain Management Solutions

PowerChain Benefits

How Managing the PowerChain Empowers Business

By actively managing an enterprise's power infrastructure in a holistic manner, PowerChain Management solutions offer a company these advantages:

Greater Reliability

Among the clear advantages of a PowerChain Management solution are enhanced reliability and availability afforded by state-of-the-art technologies, such as predictive analysis and remote monitoring, to ensure business continuity.

Operating Cost Efficiencies

PowerChain Management solutions encompass savings that begin with intelligent design and innovation and continue through heightened energy management and a system-wide approach to cost-effective management practices, including life-cycle management.

Effective Use of Capital

By providing a single point of coordination, a PowerChain Management solution speeds the time from planning to installation and commissioning. In terms of life-cycle management, this approach provides for timely upgrades to avert the high cost of complete rebuilds.

Safety

A PowerChain Management solution enhances safety by working at the system level, applying the right equipment, supporting technology, training and procedures. By definition, it always optimizes system design and engineering for safety.

Risk Mitigation

With a single point of accountability for every aspect of the PowerChain, enterprises gain broad improvements in managing risks, including: meeting critical schedules, launch windows and compliance requirements; protecting critical data and equipment; and ensuring safety and regulatory compliance.

PowerChain End-to-End Capabilities**End-to-End Capabilities for Your PowerChain's Entire Life Cycle**

Eaton has over 100 years of experience and support behind its products. Our vast team of field engineers and a global service network ensures the highest level of responsiveness to your PowerChain needs. In addition, Eaton offers replacement part depots that make it easy to keep your electrical system running at peak performance.

With an exceptionally broad portfolio of award-winning AC and DC products, Eaton is an industry leader. From the invention of the circuit breaker, our roots are steeped in innovation. Our worldwide research centers continue to deliver advanced hardware and software solutions that are enabling new generations of proactive, intelligent electrical systems. And Eaton's global brands are helping our customers meet their needs for global standards such as IEEE, NFPA®, UL®, ANSI, IEC, NEMA® and CNCA.

Optimizing your organization's electrical system via PowerChain Management solutions offers you a breadth of resources including the following services and products.

Services

Engineering and Consulting Services provide upfront analysis and design prior to project implementation. Through a PowerChain Management Audit, our power system engineers will help you to quickly diagnose problems or proactively identify ways to improve your electrical system's performance and operation. Included are:

- System design engineering
- Power audits and studies
- Arc flash and safety studies
- Energy management
- Consulting support

Turnkey and Modernization Services offer field resources to get your project plan underway. From project management on a rebuild or refurbishment, to turnkey services for a new facility or upgrade, we can help you reduce time and costs. Included are:

- Project management
- Switchgear and UPS modification
- Integrated project solutions
- Existing equipment upgrades and rebuilding
- Installation, startup and commissioning assistance

Contract and Support Services ensure that your PowerChain continues to operate optimally around the clock. In addition to scheduled maintenance programs, Eaton offers a world-class service and emergency response capability with 24/7 monitoring so that you have peace of mind and confidence. Included are:

- Factory trained and certified field technicians
- Predictive and calendar-based preventive maintenance programs
- Spare part kits, modifications and upgrades
- On-site training and technical support

- Remote monitoring and diagnostic support
- Battery monitoring with replacement coverage (asset optimization)
- Parts and labor service contracts with on-site response times

PowerChain Life-Cycle Approach**Eaton's PowerChain Management Solutions—A Life-Cycle Approach**

Because Eaton's PowerChain Management solutions bring a system-wide view, address all decision points—planning, design, finance, engineering, construction, installation, upgrading and monitoring—and consider life-cycle impacts to the PowerChain, they free up businesses to concentrate on core capabilities. This provides a far more strategic partnership, one in which Eaton brings to bear its wide range of expertise and field-proven performance for which it has been known for over a century.

The ease of doing business with a single point of accountability gains enterprises these advantages: better schedule management over the course of an entire project; an advanced ability to anticipate and solve problems; and a more comprehensive approach to prevention and troubleshooting.

Eaton's electrical group has recognized the criticality of addressing the entire PowerChain in an integrated way to give organizations the benefits of greater reliability, operating cost efficiencies, effective use of capital, safety and risk mitigation. Through a combination of acquisitions, alliances and internal development, Eaton now delivers the products, services, in-depth expertise and exceptional performance to address complete PowerChain needs.

Eaton's PowerChain Management solutions encompass:

- **Power Audits**
Eaton's extensive audit capabilities assess an enterprise's complete PowerChain in terms of reliability, safety and energy management issues.
- **System Design/Build/Engineering/Construction/Installation**
Eaton is renowned for innovation. Our specialized knowledge transforms concepts into practical PowerChain solutions that take into account cost/benefit, multi-vendor integration and equipment selection. On-site construction management and engineering staff are well versed in the practical aspects of integrating power protection into existing buildings, as well as in new construction.
- **Monitoring and Analysis**
Assessing the status of equipment, predicting imminent failures and identifying power anomalies are critical to a PowerChain Management solution. Eaton provides a full complement of these services.
- **Life-Cycle Management**
Life-cycle management services begin with product design and engineering, and continue through monitoring, maintenance, upgrades and, ultimately, replacement
- **End-to-End Equipment Capabilities**
Eaton's PowerChain Management solutions extend from research, design, enhancement and factory testing, to on-site installation

PowerChain Audit

The PowerChain Management Audit

Many facilities have gone through upgrades and changes over the years. Electrical loads have been added to automate processes, computer loads have been added to the facilities, harmonics have been introduced to the system, and the loads are often much more susceptible to power quality issues. Dealing with these issues is most efficiently done systematically by performing a site audit looking for specific problems and potential areas of improvement. By using proven techniques and strategic monitoring, Eaton will identify the areas of greatest vulnerability and will address the options for providing protection from utility issues, as well as system protection from new and ever-changing load requirements.

Eaton offers PowerChain Management Audits to evaluate power system designs and to improve the availability and reliability of the power system. This method uses proven IEEE Gold Book methods for analysis and helps to determine whether upgrading critical elements of the power system, modernizing the system or simply rehabilitating the system is the most cost-effective method of improving reliability prior to a failure.

Eaton's PowerChain Management Audits consist of visual inspections, electrical measurements using power quality monitoring equipment, interviews with on-site personnel, and reviews of utility bills and data. Specifically, Eaton will address interruptions, voltage sags, harmonics, surge protection, grounding, energy management and arc flash safety.

Eaton will investigate methods of improving the reliability of the power system to help you avoid costly downtime and repairs. The present state of the existing personal protective equipment is also evaluated. Cost and payback information will be presented where appropriate.

Eaton reviews energy consumption to determine possible savings with utility rate structures, energy usage, time of use (on- or off-peak), power factor correction and various methods of metering. By monitoring trouble areas of the facility, Eaton will identify other potential areas for improvement and savings.

Eaton's electrical group recognizes the criticality of addressing the entire PowerChain to give organizations the benefits of greater reliability, operating cost efficiencies, effective use of capital, safety and risk mitigation. With a PowerChain Management Audit, power management problems can be resolved through a single, integrated solution at every level in a facility, delivering products, services, expertise and exceptional performance to address your complete PowerChain needs. The purpose of this audit is to show areas of improvement in the electrical infrastructure and to point out areas that are well designed, maintained and operating at or above expectations.

PowerChain Management Audit Features

- Evaluate wiring and grounding methods
- Evaluate backup protection including the use of UPS power, backup generation, sag correction and power conditioning
- Review energy management processes to determine demand-side management opportunities and analyze energy-efficient electrical loads

- Evaluate surge protection at the utility connection point and at the downstream loads
- Evaluate the use of harmonic solutions including tuned filters, line reactors and phase shifting transformers
- Evaluate and review present arc flash safety compliance status
- Evaluate the quality of the voltage and current at the main service equipment
- Interview key electrical personnel on site to determine the type of operating problems, the equipment affected, and the time of occurrences

These services have proven to be an effective way of protecting expensive equipment and preventing downtime.

Screen Shot

Preventing future system distress and creating a safe power environment that will be both economical and electrically sound is another reason to bring in the power systems specialists. It is a proactive, system conscious move involving power systems engineers and technicians when upgrading to a new distribution system, adding additional loads or processes to the current power system, or contracting with a utility. Power quality and energy management studies can take place during normal plant operation or scheduled around an annual plant shutdown.

The first step to consistent and safe power is to fully understand the intricacies of the power system. No one can do that better than Eaton's Electrical Services & Systems.

Power Systems Engineering Solutions

As technology advances and more businesses come to rely on sophisticated equipment, the demand for consistent, top-quality power increases. Power systems that were installed 15, 10 or even 5 years ago were not designed to handle today's power demand. The key to a healthy power system is consistent configuration and familiarity with the operating power system. The most definitive way to accomplish this is through a Protection and Coordination Study by Eaton's Power Systems Engineers.

Energy Efficiency

EESS provides methodical testing and monitoring practices on power systems. Tests are run to analyze safety, reliability, power quality and energy management.

System Testing

Predictive Maintenance

Eaton predictive maintenance applies the latest technologies to support online condition assessment of critical electrical distribution equipment. Advancements have resulted in new applications that allow for predictive diagnostics measurements via existing electrical components.

- Performance-based maintenance
- PM program design and implementation
- Periodic testing and PM services
- Thermographic survey
- Troubleshooting
- Testing
- Predictive diagnostics
- Transformer oil processing

With extensive field experience, EESS can quickly develop a customized application to schedule and document essential system services, which allows for cost savings while improving system reliability. Limited maintenance dollars are prioritized for equipment that is critical and is in greater need of service. By implementing our predictive maintenance software with complete monitoring capabilities, equipment outages are anticipated and averted before they happen.

Continuous and Remote Partial Discharge Monitoring for Medium Voltage Equipment

Eaton InsulGard

Eaton understands the pressures that you face trying to reduce costs while at the same time maximizing your electrical system's uptime and reliability. That's why we invented the Eaton InsulGard™, a system that changes the rules of power equipment maintenance. Until now, there were only two options.

1. Wait for equipment to break down and fix it and/or
2. Periodically take equipment out of service to perform tests and maintenance—whether it's needed or not.

Now there is a third, revolutionary option. InsulGard is the first continuous, online, medium voltage, predictive maintenance system that can be used in a variety of applications including switchgear, bus duct, power centers, generators and motors. Through monitoring, it can ascertain the relative condition of insulation, the deterioration of which is the leading cause of electrical failures. And, it can monitor these conditions better than alternative testing methods. Further, you won't have to take equipment out of service or send personnel to conduct tests. In effect, the InsulGard system is a lower-cost alternative to forced outages and rigid, and sometimes unnecessary, maintenance schedules. We believe that

you will find the InsulGard system to be the best planning tool available today.

At the heart of the system is the InsulGard monitor. Whether you use it to monitor switchgear or rotating equipment, only some internal circuitry changes. The variable part of the system is the broad array of sensors we've developed to function with key electrical assets. Yet, each sensor is specifically designed to work with the InsulGard monitor to provide seamless and accurate data. They are also designed to work with existing Resistive Temperature Devices (RTDs) already present within the windings of generators and the motor. Design integrity is important when it comes to protecting your investment. The InsulGard system has it.

Generators and Motors

The InsulGard system is available with a variety of sensors appropriate for motors and generators. One of these is the RTD module that connects to existing resistive temperature devices (RTDs) already embedded within the windings of the generator or the motor. Another sensor that checks for partial discharge is the coupling capacitor, which is used on the line side. A third sensor, ideal for generators and motors, is the radio frequency current transformer (RFCT). The RFCT embraces cable shielding and is used in the line part of the winding. Used alone or in combination, the sensors connect to the InsulGard monitor where partial discharges and other variables such as humidity, load and temperature are monitored and recorded for analysis.

Specifically, here are the issues that partial discharge analysis can tell you about your rotating equipment:

- Early stages of insulation deterioration
- Sparks in voids and between windings
- Corona on end windings

Switchgear

Available sensors for switchgear include coupling capacitors or a combination of radio frequency voltage sensors (RFVSS) and radio frequency current transformers (RFCTS). Coupling capacitors detect partial discharges in a cubicle and/or adjacent cubicles and are typically installed on the load side of the feeder breakers or on the main bus. Radio frequency voltage sensors (RFVSS) are also used to detect discharges within the cubicle. They are typically installed on the load side of the feeder breakers, or on the main bus. They are connected to the current or the potential transformer's secondary neutral terminal.

Large Power Transformers

Eaton InsulGard G is available for transformers that contain a capacitive tap at the base of the bushing. This tap is normally used for power-factor measurements. Transformers with a primary voltage of 13.8 kV can be monitored using our standard partial discharge sensor.

Software

InsulGard software is part of the InsulGard system. It allows you to view the dynamics captured by the monitor and to analyze the condition of insulation based on the guidelines and parameters provided by Eaton predictive diagnostics specialists. The eventual goal of predictive diagnostics is to create a Web-based service whereby you can statistically compare the relative condition of your equipment to others who have similar equipment in operation by equipment type, manufacturer, voltage class ratings, partial discharge activity longevity, etc. Users will benefit by comparing their own measured partial discharge data with our extensive database to predict outcomes and to plan maintenance. This database will not identify customer sites or locations in order to guard the privacy of our customers.

Medium Voltage Vacuum Replacement Breakers (MVVR)

New Replacement Breakers from the Ground Up

VR-Series medium voltage vacuum replacement (MVVR) breakers are brand new breakers that have been designed, manufactured and fully tested to be functional electrical and mechanical replacements for almost any manufacturers' original air magnetic and some vacuum circuit breakers. However, if cell structure modifications are required, they are reversible.

Unnecessary downtime is avoided because the breakers are new, and only require one outage for removal and installation. By only replacing the breakers, equipment costs are reduced while the life of the existing switchgear is extended.

Many circuit breakers require additional contacts, mechanism operated contacts (MOCs), that are mounted external to the circuit breaker mechanism. When these contacts are operated by high speed vacuum breakers, they travel almost four times faster than existing air magnetic circuit breakers and can transfer up to 16 times the kinetic energy to the MOC switch. The increased forces can damage the existing MOC switch and cell components, and in some cases, stall the breaker when trying to close. A SURE CLOSE MOC system balances the speed and force of the breaker's MOC operator to prevent stalling and damage to the cell and the MOC switch.

Replacement

Eaton manufactures over 158 different models of VR-Series MVVR breakers that replace air magnetic circuit breakers originally manufactured by: Westinghouse®, General Electric®, Allis-Chalmers, Federal Pacific Electric®, ITE® and McGraw-Edison®.

Competitive Upgrades—Low Voltage Power Air Breakers

AR-Series Replacement Breakers

The AR-Series (air-replacement) breakers are not retrofits. They are 100% new breakers used to completely replace the original drawout type power air circuit breaker. This solution uses state-of-the-art Eaton Magnum™ breaker technology that provides maximum life-extension and switchgear modernization. The offering includes a new breaker, a cassette with extension rails and a standard door. No modifications are required to the original line/load power stabs or to the secondary disconnect contacts.

This solution can eliminate safety problems caused by defective racking and/or operator mechanisms. Additional safety against arc flash incidents can be obtained by equipping the breaker with ARMS Technologies, thereby reducing the arc flash energy available at downstream devices during maintenance periods. Additional switchgear maintenance problems such as parts unavailability and lengthy maintenance procedures can be eliminated. This solution often provides a substantial total installed cost savings when compared to completely replacing the switchgear assembly.

In many instances, the AR-Series replacement breaker can be combined with engineering services to provide continuous current and/or interruption rating upgrades.

The AR-Series breakers are designed, manufactured and tested to modern IEEE/ANSI standards.

Designs are available for a wide variety of drawout type low voltage power air circuit breakers (LVPACB) originally manufactured by Westinghouse, Federal Pacific Electric, Allis-Chalmers, ITE and General Electric.

Pictured on this page are several examples of available designs. Contact your local Eaton sales representative for information on other breaker types.

Class 1 Reconditioning

Better Than New

The useful life capacity and performance of vintage or damaged motor controls and power distribution equipment can be extended and enhanced through Eaton's Aftermarket Centers of Excellence (ACE). Their strategic locations enable rapid response through a cost-effective program of selective hardware retrofits.

Each ACE strictly adheres to all national standards and quality processes. Field experts use evolving technology to ensure the most advanced retrofit upgrade possible. Access to vintage parts won't be a problem; each ACE has both Cutler-Hammer and Westinghouse renewal parts available.

Proven

In the ongoing battle of maximizing operating performance and safety, Eaton's Class 1 reconditioning service helps to restore the integrity of electrical protection equipment to its required level of reliability.

Automation Services

Effectively applying leading-edge technologies is often the key to enhanced performance, improved output, and reduced frequency and severity of outages. Engineering these new technologies into an existing equipment configuration is an EESS specialty.

System Integrator

EESS is a full service systems integrator with proven expertise in power and energy management systems.

EESS provides a unique alternative to conventional manufacturer-integrator-contractor teams. With project management expertise, EESS offers single-point responsibility from a major controls manufacturer. Industry knowledge allows for seamless integration of new products, regardless of equipment manufacturer.

Process Improvement

EESS has the capabilities to address the entire scope of integration and automation needs, including:

- Power management systems (IQ, IMPACC, Power Xpert® Software, Foreseer® Services)
- Automatic transfer schemes
- Distributed generation/generator control systems
- Demand management—load shedding/peak shaving systems
- Generator and ATS system monitoring and testing
- Health care emergency power supply systems
- PLC systems (Eaton, Allen-Bradley®, Modicon®, GE Fanuc® and Siemens®)

Integrated Project Solutions

The project management group within EESS provides integrated project solutions to customers in the government, industrial, commercial and utility sectors. Eaton's Federal Systems Group also focuses on mission-critical government installations, providing project solutions, on-going maintenance and remote monitoring.

- New substation design and construction
- Integrated emergency power requirements, including UPS, generators and alternate feeders
- Plant automation
- PLC control and load shedding
- Electrical plant monitoring and control
- Process automation and system integration

The integrated project solutions engineers manage the technical and commercial risk inherent in meeting project objectives. These engineers focus on performance, cost and time goals, while controlling or maintaining the scope of the project.

Speed of Response

By hiring the EESS project management group, you can release the burden of multi-supplier coordination. EESS offers single-point accountability for all technical, financial and commercial coordination within the scope of the project.

Eaton's Electrical Services & Systems

Asset Optimization

Outsource the responsibility for the electrical distribution system and the associated equipment to Eaton's Electrical Services & Systems. Offerings involve cost savings and performance guarantees for greater focus on the core business. Asset optimization uses all the tools and capabilities within the other service platforms, resulting in improved reliability, life expectancy and overall cost.

Knowledge Management

Collect and transform your system data to useful knowledge; allow for proactive planning, energy management, optimized decision-making, failure prediction and, ultimately, cost savings.

Integrated Project Solutions

Engineering, design, procurement, installation and commissioning of power systems equipment; a total turnkey approach.

Power Systems Engineering Solutions

Power systems automation, design engineering, training, predictive diagnostics, power quality and power systems studies/analysis to decrease costs and increase productivity.

Power Systems Modernization

Keep systems operating at peak efficiency, reliability and safety; extend the life of the electrical asset through equipment life extension and upgrade solutions using new technologies.

New Equipment Services

Installation, testing and commissioning of virtually any electrical equipment.

Field Services

Power system and equipment service, maintenance programs, testing, upgrades and Aftermarket solutions; 24/7 emergency service; crisis response and disaster recovery.

Further Information

Pushbuttons and Indicating Lights

E22/EM22 Pilot Devices

Product Description

Eaton's Cutler-Hammer® 22.5 mm industrial heavy-duty pushbutton line offers a wide array of functional, smartly styled illuminated and non-illuminated pushbuttons, selector switches, push-pulls, alternate action and twist-to-release operators. The complete line also includes transformer, full voltage, resistor, LED or neon light units.

E22 operators are available with either a traditional chrome or matte black front-of-panel appearance. The space-saving design and modular construction of the E22 line makes on-the-job assembly fast and simplifies the stocking of both components and complete devices.

Eaton's Cutler-Hammer EM22 metal series is a rugged line of metal construction 22.5 mm pushbutton devices. They are an extension of the industrially proven E22 heavy-duty double insulated 22.5 mm pushbutton family.

EM22 operators are heavy-duty zinc die-cast construction plated with a corrosion-resistant chromate finish. Operators are complete with a very durable chrome-plated metal bezel. Indicating light units in the EM22 series feature smartly styled round lenses that enhance their appearance and brightness.

All EM22 operators are compatible with existing E22 contact blocks, light units, accessories and enclosures.

EM22 metal operators and indicating lights are grounded when mounted to metal panels through the toothed mounting nut. They are not grounded when mounted to plastic panels.

Product History

E22 was first sold in 1983. The line has had one major change in the mid 1990s to increase the size of the button plates to be roughly equivalent to a 30mm pushbutton. Then in 2002, the EM22 extension of the line was introduced. Since then, only minor changes/additions have occurred. While the entire product breadth is not available anymore as aftermarket, most functionality is available in the products shown in this catalog.

Notes

① In order to comply with NFPA 79 and IEC 60204-1 requirements: The colors black, white or gray shall be used for Push-Push operators that act alternately as START/ON and STOP/OFF pushbuttons. White shall be used for illuminated Push-Push operators. Push-Push operators shall only be used for functions that cannot result in a hazardous condition.

IEC 60204-1 recommends that Push-Push operators acting alternately as START/ON and STOP/OFF pushbuttons be marked with the IEC symbol for Push-Push pushbuttons.

② Compliant with EN418 Machinery Safety Directive.

Twist-to-Release, Push-Pull and Key Release Components

Maintained Contact Mushroom Head Operators, Non-Illuminated—UL (NEMA) Type 3, 3R, 4, 4X, 12, 13

	For 40 mm trigger action switch—to be used with E22LTA2 and E22LTA2N123 operators	E22MGTA
	Note ① Yellow plates comply with EN418 machine safety standard background requirements for E-Stops.	

Options

Engraved Legend Plates with Standard Markings—1/8-Inch High Character Size

Aluminum—Aluminum legend plates have a plastisol backing to help prevent rotation of the operator when installed in an unnotched hole. Operators installed with aluminum legend plates and legend plates with clip-in inserts maintain their UL Listed Type 4-4X-13 rating.

Plastic—Both the laminated plastic legend plates and the legend plates with clip-in inserts offer the choice of four background colors. Either side of the legend plate or insert can be field engraved.

Product Overview

Totalizers are used in a wide variety of applications where accurate totals are needed. Typical applications include counting the number of parts produced, amount of material used, or the number of machine cycles occurring. Totalizers are the simplest and most common type of counter. As an added bonus, some models can perform both totalizing and ratemeter functions.

Typical Application

Parts are fed into a machine or process, an operation is performed, and the finished parts exit the machine or process. The subtract totalizer is used to indicate the number of parts in process.

Application Example

Product Selection Guide

Totalizers

	Characteristics	Typical Applications	Panel Cutout in Inches (mm)	Page
Mechanical 	Various size ranges for different duty cycles and environments No power supply needed Long life and always readable display	Winding and spooling equipment Position display Mechanical piece/cycle counting	Various mounting configurations	V12-T24-4

Product Overview

Eaton's mechanical totalizers are available in a variety of heavy-duty configurations for applications when power is unavailable.

Features

- Variety of reset methods available
- Accurate counting without need for power

X Series/Pushbutton Desk Tally

Product Description

X Series Counters

Model X Series is a dustproof and rustproof series of counters for light and medium-duty work. They are sound and durable, requiring a minimum of driving effort, and have been especially designed for incorporation as integral parts of a variety of machines and equipment.

Pushbutton Desk Tally

Ruggedly constructed counters with feather-touch pushbutton operation and maximum readability. Specifications and dimensions are basically the same as the X Series counters. Will give long and accurate service in areas requiring hand counting or during hand operations.

Product Selection

When Ordering Specify

To determine a model number from the Product Selection table for Model X Series Stroke Counters and Pushbutton Desk Tallies, consider:

- Number of figures
- Drive

CS Series

Product Description

Model CS Series of small, compact, top reading stroke counters is designed for use in most industrial

applications. These counters are ruggedly built and feature a single casting case, which assures great rigidity and a tight seal for working parts.

Product Selection

When Ordering Specify

To determine a model number from the Product Selection table for Model CS Series Stroke Counters, consider:

- Number of figures
- Drive lever

H Series

Product Description

Model H Series heavy-duty counters are designed for hard usage and long, trouble-free service. They are high speed, streamlined counters constructed of the highest quality materials and drive shaft moves in oil-less bearings. All shafts are stainless steel. The drive action is designed with overstroke so counter does not bottom, increasing life and permitting easier installation. The sturdy cover

is stamped steel, locked into position on a heavy, die-cast base of a special alloy. A heavy steel mounting plate is adjustable for either bottom or back mounting. Model "H" has earned the reputation of being the "work horse" of industrial counters. Wing nut or tamper-proof reset lock which requires a key to reset the counter, guarding against unauthorized resetting or tampering.

Product Selection

When Ordering Specify

To determine a model number from the Product Selection table for Model H Series Stroke Counters, consider:

- Number of figures
- Drive lever location (left or right side)
- Type of reset (lock or wing nut)

Shaded area denotes obsolete or discontinued products and services.

D-7 Series

Product Description

Model D-7 Series spur gear end drive units are compact counters that meet a variety of needs. Accurate, dependable and moderately

priced, they are especially recommended for braiding machines, low-speed coil winders, wire measuring equipment and all medium-duty revolution applications.

Product Selection

When Ordering Specify

To determine a model number from the Product Selection table for Model D-7 Series Revolution Counters, consider:

- Number of figures
- Shaft drive
- Shaft rotation direction
- Reset or non-reset

D-7 Series

D-6 Series

Product Description

Model D-6 right-angle worm drive counters are ruggedly designed for high speeds on light-duty applications. Small “D” counters are easily

adapted as accessory equipment on machinery where right-angle drive is desired to permit full view reading of the counter.

Product Selection

When Ordering Specify

To determine a model number from the Product Selection table for Model D-6 Series Revolution Counters, consider:

- Shaft rotation direction

Shaded area denotes obsolete or discontinued products and services.

HDW Series

Product Description

Model HDW Series are high speed, end drive revolution counters that have the rugged features of all “H” counters, with the addition of double worm drive that produces speeds up to 2000 cpm. Lightweight precision molded wheels reduce centrifugal force and

eliminate slipping. They are particularly recommended for quick starting and stopping machines, such as coil winders and wire measuring or reeling equipment and on applications where continuous high speed measuring is required.

Product Selection

Electromechanical Totalizers**Product Overview**

Eaton's electromechanical counters provide accurate counting from a variety of electrical signals and a display that is always readable, even when power is not present.

Features

- Available with reset and without
- Always readable display
- Variety of mounting options

Standards and Certifications

- UL certifications on some products (see individual product pages for details)

Micro Display Counter

Product Description

Eaton's micro display counter is perfect for 12 Vdc applications where small size is important.

Features

- Seven-digit micro adding counter
- High shock resistance
- Low power consumption; suitable for battery consumption
- Small dimensions
- Large optical figures
- Different viewing possibilities
- Flush mount with integrated spring clip
- Protection IP65
- Stores value also at power failure
- Long service life

Standards and Certifications

- cRU[®]us certified
- CE marked

MF Series

Product Description

Model MF Series are shaded pole electric counters with straight AC operation and feature a non-rectified, shaded pole coil designed to withstand transient, high voltage spikes. This feature,

combined with a simplified, hinged escapement drive, also eliminates the possibility of miscounts and greatly adds to the life of the counter. Tallies at speeds up to 750 cpm.

RMF Series

Product Description

Model RMF Series of electric counters are designed to give accurate counts through a wide range of speeds up to 1000 cpm. It features a strong, silent, fast operating DC electromagnetic drive

with a compact, dependable built-in higher capacity rectifier for AC operation. The counter has a minimum of moving parts that never need lubrication under normal operating conditions.

Compact and rigid, it continues to operate dependably even when subject to severe shock and vibrations. Entirely enclosed to prevent damage from moisture and dust. Available in 6 or 7 figures.

Product Selection

When Ordering Specify

To determine a model number from the Product Selection table for Model RMF Series Electronic Counters, consider:

- Number of figures
- Voltage
- Type of reset
- Type of mounting

Shaded area denotes obsolete or discontinued products and services.

ME Series

Product Description

Small in size and price, but large in design versatility and model variety is the ME Series of miniature electric counters. Models in most popular AC or DC voltages operate on as little as 3 watts, with the non-reset

models measuring only 1 x 1.593 x 2.187 in (25.4 x 40.5 x 55.5 mm) and weighing just three ounces (85 grams).

Available in 4, 6 or 7 figures, the counters feature stainless steel self-lubricating shafts, nylatron pinions and a synchronous electromagnetic drive to assure accurate,

reliable, long life operation. Designed for mounting flexibility and aesthetic attractiveness, the miniature electric counters are available with three types of mounting and a glare retarding finish Delrin, with crisp easy-to-read numerals set close to a tamper-proof sealed figure window.

Electronic Totalizers

Electronic Totalizers

Product Overview

Eaton's electric totalizers provide a flexible and accurate method of displaying count and measurement data in an easily readable format.

Features

- LED and LCD readouts
- Variety of sizes and packages
- Programmable inputs and displays available

Standards and Certifications

- Most products are UL certified (see individual product pages for details)
- CE

1/32 DIN LCD Totalizers

Product Description

Compact battery powered totalizers where AC power is unavailable.

Features

- Low price and high efficiency
- Large eight-digit LCD display, height of the figures 0.31 in (8 mm)
- Various counting modes like up/down differential available
- High voltage input for 10–260 Vac/Vdc voltage pulses
- IP65
- Screw terminals, RM 5 mm
- Lifetime of the battery approximately eight years
- Locking of the reset key
- Operating temperature 14 to 140 °F (–10 to 60 °C)
- All version of positive or negative counting edge
- Filter function for bounce-free counting with mechanical contacts

Standards and Certifications

- UL recognized
- CE marked

10–120V input AC/DC powered, NPN only 0.94 x 1.89 in (24 x 48 mm)	E5-024-C0408
Count up/down 4–30 Vdc powered, NPN only, 0.94 x 1.89 in (24 x 48 mm)	E5-024-C0410

Technical Data and Specifications

1/32 DIN LCD Totalizers

Description	Specification
Power supply	Non-replaceable lithium battery (lifetime approximately eight years at 68 °F (20 °C))
Display	LCD, eight-digits
Figure size	0.31 in (8 mm) high
Mode	Adding or subtracting (selectable), counting direction, differential counting or phase discriminator single or dual evaluation (selectable)
Display range	–9999999 to 99999999, with overflow display
Reset	Manual and electrical
Interference emissions	EN 55011 Class B, EN 61 000-6-2, EN 61010 Section 1 (only AC versions)
Housing	Dark gray RAL 7021
Operating temperature	14 to 131 °F (–10 to 55 °C)
Ambient temperature	14 to 140 °F (–10 to 60 °C)
Storage temperature	–4 to 158 °F (–20 to 70 °C)
Protection	IP65 (from front)
Weight	Approx. 1.76 oz (50 g)

1/32 DIN LCD Totalizers, continued

Description	Specification
Counting inputs:	
Counting input of the DC version	Max. 30 Vdc
Slow counting input	Max. 30 Hz (NPN)
Fast counting input	Max. 12 kHz (PNP)
Switching level	NPN: Low 0–0.7V, High 3–30 Vdc PNP: Low 0–0.7V, High 3–30 Vdc
Counting Input of the high voltage versions	
Counting input	Optocoupler input, max. 30 Hz
Min. pulse time	16 ms
Switching level	Low: 0–2 Vac/Vdc High: 10–260 Vac/Vdc
Counting direction switching (only DC versions)	
	Contact input, open collector NPN (switching at 0 Vdc)
	Switching level, NPN—Low, 0–0.7V, High 3–5 Vdc
Reset input (only DC and high voltage)—	
Minimum pulse time	DC: 50 ms; high voltage: 16 ms
Contact input NPN	Low: 0–0.7V High: 3–30 Vdc
High voltage input	10–260 Vac/Vdc
Electrical reset key locking (for DC and AC)	
	Contact input, open collector NPN (switching at 0V)
	Switching level, NPN—Low, 0–0.7V, High 3–5 Vdc

Courier Series

Product Description

Eaton's Courier Series is a high quality totalizer powered by a replaceable lithium battery.

Features

- Eight-digit totalizer
- 1/Tau ratemeter
- Scaling capabilities
- Remote reset terminal
- 0.43 in (10.9 mm) display
- Front panel reset
- NEMA 4X

Standards and Certifications

- CE marked

Product Overview

Count controls are counters that provide output signal(s) at preset count value(s). Typical applications include cut-to-length, batching, filling, mixing and dispensing. A variety of count controls in different sizes, display types and feature sets are available from Eaton.

Application Description

The illustration shows a simple cut-to-length application. The roll of paper is measured using a measuring wheel and rotary contactor (or encoder). Once the desired length is reached, an output signal may be directed to a shear for activation. Following the cut-off, the count control will reset to zero and begin measurement of the next piece. Options such as batch counting, where the number of cut pieces is counted, are also typical of this application.

Application Example

Product Selection Guide

Count Controls/Preset Counters/Totalizers

	Characteristics	Panel Cutout in Inches (mm)	Page
E5-148-C 	Low cost, simple count control Battery operated Easy-to-change preset values Two-line display: input and preset values	1.772 x 1.772 (45 x 45)	V12-T24-46
E5-648-C 	Two-line display: counter, timer or tachometer AC or DC power options Wide choice of count modes for pulse inputs, time or frequency Two or four presets	1.772 x 1.772 (45 x 45)	V12-T24-48
Ambassador 	Six-digit, high-visibility, two-line LCD display User-configurable control inputs Highly flexible control/display	2.667 x 2.667 (68 x 68)	V12-T24-56
PD-Q and PD-ER 	Electromechanical pre-set counter Easy setpoint adjustment using pushbuttons Base mount or panel mount	2.72 x 1.59 (69 x 40.5) (panel mount model)	V12-T24-60
Fusion 	Integrated controller combines operator interface, ladder logic and high-speed counting	2.667 x 5.433 (68 x 138)	V12-T24-91

1/16 DIN Battery Powered LCD Count Control

Product Description

Battery-powered electronic preset counter.

Features

- Replacement for electromechanical preset counters
- No power supply necessary (battery operated)
- Count and reset input electrically separated from counter through optocoupler input range 12–250 Vac/Vdc
- Two-line LC display count, preset and level of the output
- Screw terminal
- Data security, through two exchangeable lithium batteries, lifetime minimum eight years
- Easy programming
- Counter presets easily via presetting keys allocated to each decade
- Output: Potential free relay, programmable normally open or normally closed contact

Standards and Certifications

- cRU[®]us approval
- CE marked

General Specifications

Description	Specification
Power supply	2 pcs user exchangeable lithium batteries, type 1/2 AA lithium 3.6V
Display	Two-line LCD display, six digits; 999999
Figure size	0.28 in (7 mm) or 0.18 in (4.5 mm) high
Input	Reset, count and keylock inputs
Input polarity	Bi-directional optocoupler input for the reset count inputs; reset, count and keyboard lock is connected to 3 Vdc
Input min. pulse duration	Reset input 50 ms; keyboard lock input 15 ms
Input switching levels	
Low	<3 Vac/Vdc
High	12–250 Vac/Vdc
Input frequency	Max. 25 Hz
Input resistance	110 Kohms
Output	Bistable relay with potential free contact (programmable as normally closed or normally open contact)
Max. switching voltage	250 Vac/220 Vdc
Max. switching current	2A
Max. switching capacity	60 VA/30W
Output response time	<20 ms, max. 4 Hz
Data retention	Via two batteries, eight years or 5x10 ⁶ power operations of the output relay and an ambient temperature of 77 °F (25 °C)
Ambient temperature	14 to 122 °F (–10 to 50 °C)
Storage temperature	–13 to 140 °F (–25 to 60 °C)
EMC	According to EC EMC directive 89/36/EWG, EN 61 000-6-4/ EN 55011 Class B, EN 61 000-6-2
Protection	IP65 (front)
Weight	Approx. 2.82 oz (80 g)

1/16 DIN LCD Preset Counters with Rate and Time

Product Description

AC or DC powered preset counters that can function as timer or tachometer/ratemeter.

Features

- Two-line display with green backlight (E5-648-C2421 and E5-648-C2422) or multi-color red/green LED backlighting (E5-648-C4461 and E5-648-C4462)
- Programmable as preset counter, batch counter or totalizer
- Power supply: 90–260 Vac or 10–30 Vdc
- Direct input of the presets via front keys or Teach-In input
- Relay outputs
- Scaling by multiplication and division factors 0.0001 to 99.999
 - Two preset values, two outputs
 - Four preset values, four outputs

1/16 DIN Two-Line LCD Count Control

Description	Catalog Number
Two Preset LCD Count Control with Backlighting	
90–260 Vac power 1.89 x 1.89 in (48 x 48 mm)	E5-648-C2421
10–30 Vdc power 1.89 x 1.89 in (48 x 48 mm)	E5-648-C2422
Four Preset LCD Count Control with Multi-Color Display	
90–260 Vac power 1.89 x 1.89 in (48 x 48 mm)	E5-648-C4461
10–30 Vdc power 1.89 x 1.89 in (48 x 48 mm)	E5-648-C4462 ①

Technical Data and Specifications

General Specifications

Description	Specification
Power supply	10–30 Vdc external fuse protection 90–260 Vac max. 8 VA external fuse protection
Display	Two-line LCD display, six digits with programmable decimal point
Figure size	0.35 in (9 mm) high upper line 0.28 in (7 mm) high lower line
Count inputs	Two count inputs (A and B), programmable for count/count direction, up/up, up/down, quadrature, quad2, quad4, A/B or (A-B)/A x 100%
Input polarity	Programmable for all inputs in common NPN/PNP
Input resistance	Approx. 5 Kohms
Count frequency	Max. 55 kHz with programmable filter for 30 Hz (see manual for details)
Input min. pulse duration	10 ms for control inputs/1 ms for reset input
Switching levels	
DC supply voltage	
High	0.6 x UB–30 Vdc
Low	0–0.2 x UB (Vdc)
AC supply voltage	
High	12–30 Vdc
Low	0–4 Vdc
Pulse shape	Variable (Schmitt-Trigger characteristics)

Note

① Not a stocked product, contact Eaton Care for assistance.

General Specifications, continued

Description	Specification
Output 1	
Relay	Programmable as normally open or normally closed
Switching voltage max.	250 Vac/110 Vdc
Switching current max.	3 A Vac/3 A Vdc
Switching current at DC min.	30 mA Vdc
Switching power at DC	90 W
Switching power at AC max.	750 VA
Output 2	
Relay	Relay with changeover/Form C contact
Switching voltage max.	250 Vac/110 Vdc
Switching current max.	3 A Vac/3 A Vdc
Switching current at DC min.	30 mA Vdc
Switching power at DC	90 W
Switching power at AC max.	750 VA
Reaction time of the outputs	Approximately 10 ms
Data retention	Min. 10 years or 1 million memory cycles
Sensor supply voltage	
AC powered unit	24 Vdc \pm 15%, 80 mA
DC powered unit	Max. 80 mA, DC voltage is connected through
Ambient operating temperature	-4 to 149 °F (-20 to +65 °C)
Storage temperature	-13 to 167 °F (-25 to 75 °C)
EMC	
Emitted interference	EN 55011 Class B
Immunity to interference	EN 61000-6-2
Protection	IP65 (front)
Weight	Approx. 4.4 oz (125 g)

Dimensions

Approximate Dimensions in mm [Inches]

1/16 DIN Two-Line LCD Count Control

President Series (Count Control)

Product Description

Eaton's President Series features an easy-to-read LED and a simple preset input by means of the large keypad.

Features

- Five- or six-digit, LED display, 0.56 in (14 mm)
- 2 or 3 presets
- 15 Vdc at 100 mA output power
- Rear panel screw terminals
- 20 mA current loop communications
- 2 Form C relays
- Tactile keypad NEMA 4 front panel

Standards and Certifications

- UL listed
- CSA marked
- CE marked

President Series Count Control

Description	Features					Main Counter	Presets	Digits	Catalog Number
	Totalizer	Batch Counter	Rate	Scaler	Crop-Cut				
Dual preset	—	—	—	✓	—	1	2	5	58831400
Dual preset with totalizer or batch counter	①	①	—	✓	✓	1	2	6	58851400
Three presets with floating pre-warn	—	—	—	✓	—	1	3	6	58861400
Main counter, batch and totalizer presets	②	②	✓	✓	—	3	1 ea.	6	58827400
Two independent count registers	③	③	✓	✓	—	3	1 ea.	6	58827410

Notes

- ① These models have, in addition to the main count register, a register that may be configured to be used as either a totalizer or single preset batch counter. These two functions are mutually exclusive.
- ② The model 58827-400 has both a totalizer and a batch counter, each with a single preset. In addition, the batch counter may be configured as an additional totalizer with control instead of batch counter.
- ③ The model 58827-410 has two completely independent count input channels feeding two independent, single preset count registers. In addition, a third single preset register may be used as either a totalizer or a batch counter for one or both of the two main counters.

Ambassador Series (Totalizers)

Product Description

Eaton's Ambassador Series is our most noise-immune totalizer available. Various counting modes can be set by the user.

Features

- AC powered, two-line LCD display
- Eight-digit totalizer
- 1/Tau ratemeter
- Totalizer and ratemeter scaling
- Four user-configurable control inputs
- Two solid-state outputs
- RS-485 serial communications

Standards and Certifications

- UL listed
- CE marked

Ambassador Series Totalizer

Ambassador Series (Count Control)**Product Description**

Eaton's Ambassador Series provides up to four presets in one of the most noise-immune packages available.

Features

- AC powered, two-line LCD display
- Eight-digit totalizer
- 1/Tau ratemeter
- Totalizer and ratemeter scaling
- Four user-configurable control inputs
- Up to two output relays
- Two solid-state outputs
- RS-485 serial communications
- Feet/inches control available

Standards and Certifications

- UL listed
- CE marked

Ambassador Series

PD-Q and PD-ER Series

Product Description

The PD-Q Series is a five-digit, true subtracting electric predetermined counter that features pushbutton operation of both predetermined count settings and reset. The predetermined count is set by holding the RESET button in and then depressing the easy to operate pushbutton selectors under each digit.

The unit subtracts, one count for each contact closure or impulse and actuates a 4 ampere, 250 Vac switch when zero is reached.

The output signal from this switch can be used to halt or change the flow of items being counted, and/or operate other electrical apparatus. The counter returns to the predetermined number when the RESET button is depressed and it is immediately ready to control the next lot or batch.

The PD-ER Series is identical to the PD-Q Series, except that it has electric reset (ER) for remote operation, allowing either local or remote use.

Features

- Easy setpoint adjustment
- Available in base mount or panel mount configurations

Standards and Certifications

- UL recognized as indicated

Product Overview

Ratemeters are used in a variety of applications where it is necessary to monitor the speed of a process.

Conveyors, baking ovens, material flow and motor speed are typical uses for ratemeters. Models with alarm outputs can be used to detect high or low rates. Rate indicators are often included as a standard feature on totalizers and count controls.

Typical Application

One of the most common ratemeter applications is a tachometer. A tachometer displays motor or shaft RPM. The inductive proximity sensor detects the key on the shaft and the meter calculates the rate at which the shaft is turning based on a user-defined scaling factor. Signals from encoders, mag pickups, Hall effect sensors, etc. may also be used as inputs.

Application Example

Product Selection Guide

Tachometers/Ratemeters

E5-148-C 	Low cost, simple count control Various power options: battery, AC, DC Easy-to-change preset values Two-line display: input and preset values	1.772 x 1.772 (45 x 45)	V12-T24-46
Courier 	Replaceable lithium battery Eight-digit, high-visibility LCD display Optional backlighting Various input options available	1.299 x 2.677 (33 x 68)	V12-T24-64
Eclipse 	Six-digit, super bright LED display Multiple models available: totalizers, ratemeters, count controls, digital panel meters and flow controls	1.772 x 3.780 (45 x 96)	V12-T24-66
Ambassador 	Six-digit, high-visibility, two-line LCD display User-configurable control inputs Highly flexible control/display	2.667 x 2.667 (68 x 68)	V12-T24-69
Fusion 	Integrated controller combines operator interface, ladder logic and high-speed counting	2.667 x 5.433 (68 x 138)	V12-T24-91

Courier Series**Product Description**

Eaton's Courier Series is powered by a replaceable lithium battery.

Features

- 1/Tau ratemeter
- Scaling capabilities
- Remote reset terminal
- 0.43 in (10.9 mm) display
- Front panel reset
- NEMA 4X

Standards and Certifications

- CE marked

Eclipse Series

Product Description

Eaton's Eclipse Series offers a high visibility LED and a variety of optional outputs.

Features

- 1/8 DIN cutout
- NEMA 4X front panel
- Universal AC power supply (85–265 Vac)
- Removable screw terminals
- Short depth: 3.6 in (91 mm)
- Front panel programming

Standards and Certifications

- UL and cUL listed
- CE marked

Product Selection

Technical Data and Specifications

General Specifications

Description	Specification
Input Power	
AC powered models (57701-4XX)	
Input power	85–265 Vac, 47–63 Hz, 20 V A
External fuse	0.2A, 250 Vac, time delay (T200 mA, 250V)
Isolation dielectric strength	2300 Vac
Human Interface	
Display	Five digits
Type	0.56 in high, seven segment, red LED
Indicator	One red LED program/calibration indicator
Update time	0.1 to 99.9 seconds minimum
Data Retention	
Memory type	EEPROM, no batteries required
Duration	100 years
Signal Input	
Rate/process time	Signal in
Sensor type	Sink or source, DIP switch selectable
Input impedance	4.75 Kohms to +5 Vdc or 34.9 Kohms to ground
Thresholds	
High	3.5 to 28 Vdc
Low	0 to 1.9 Vdc, for single ended signals
Magnetic pickup range	200 mV p-p to 65V rms into 34.9 Kohms
Frequency response	200 Hz max. or 10 kHz max. (5V signals), DIP switch selectable
Program Enable Input	
Sensor type	Sink only
Input impedance	4.75 Kohms to +5 Vdc
Thresholds	
High	3.5 to 28 Vdc
Low	0 to 1.9 Vdc
Response	25 ms max. (5V signal)

General Specifications, continued

Description	Specification
Accessory Power Output	
Voltage	12 Vdc \pm 12%
Current	75 mA max.
Protection	Short-circuit protected
Optional Outputs	
Relay board	
Number of relays	Two
Contact type	1 set Form C per relay
Contact rating	5 A, 250 Vac or 30 Vdc
Isolation dielectric strength	2300 Vac
Analog retransmission	
Output signals	4–20 mA (<750 ohms) and 0–10 V (>2500 ohms)
Accuracy	0.13% full scale and 100 PPM/ $^{\circ}$ C (and 0.07% full scale change over 4–20 mA load ranges)
Isolation dielectric strength	2300 Vac to signal inputs, relays and AC power inputs; 500 Vac to RS-485 and DC power inputs
RS-485 serial communications	
Baud rate	1200, 2400, 4800, 9600, or 19,200, programmable
Parity	Even, odd or no parity
Address range	00 to 99 decimal
Protocol	Opto 22 [®] compatible
Isolation dielectric strength	2300 Vac to signal inputs, relays and AC power inputs; 500 Vac to analog outputs and DC power inputs
Environmental	
Operating environment	Indoor use to 2000 meters
Temperature	
Operating	32 to 122 $^{\circ}$ F (0 to 50 $^{\circ}$ C)
Storage	–4 to 158 $^{\circ}$ F (–20 to 70 $^{\circ}$ C)
Humidity	0 to 85% RH, noncondensing
Vibration	2.5 Gs, 30 to 200 Hz
Shock	30 Gs, 11 ms half sinewave
EMC	
	Immunity to EN 50082-2 (heavy industrial)
	Emissions to EN 50081-2 (heavy industrial)
Front panel	NEMA 4X when mounted with gasket provided
CE EMC immunity and emissions requirements	Met using shielded wiring on the RS-485, analog output and pulse input/ power lines. The shields were connected to earth ground at the Eclipse end of the shields.
Pollution degree 2	Overvoltage Category II

Eclipse Series Ratemeter

Ambassador Series

Product Description

Eaton's most noise-immune ratemeter with an easy-to-read two-line LCD.

Features

- AC/DC powered, two-line LCD display
- Two-line, five-digit, high visibility, 0.3 in (7.5 mm) characters, backlit display
- One or two rate inputs
- Two rate alarms
- Programmable average and zero times
- Programmable decimal point
- 12 Vdc, 100 mA max. output power
- Removable screw terminals
- RS-485 communications
- NEMA 4 front panel

Standards and Certifications

- UL and cUL listed
- CE marked

Product Selection

Description	Specification
Power Input	
Model 57150-40X	10 to 15 Vdc, 300 mA maximum
DC Power Output (AC Models Only)	
Output	12 Vdc ($\pm 25\%$), 100 mA maximum (includes all line and load variations)
Environment	
Operating temperature	32 to 131 °F (0 to 55 °C)
Storage temperature	–4 to 158 °F (–20 to 70 °C)
Operating humidity	85% relative, noncondensing
NEMA 4 rating	When mounted with gasket provided
Ratemeter	
Type	1/Tau
Digits	Five with overrange indication
Scaler range	0.00001 to 99999
Decimal point	Five positions, programmable
Average time	0.1 to 99.9 seconds, programmable
Zero time	0.1 to 99.9 seconds, programmable
Accuracy	$\pm 0.015\%$ of reading
Maximum Rate Input Frequencies	
Maximum frequencies	All maximum frequencies listed are with a square wave input (50-50 duty cycle)
Contact Input	
Contact input	40 Hz

General Specifications, continued

Solid-State Input

Sinking sensor (all DIPs off)	7.3 kHz
Sourcing sensor (push-pull output)	
High threshold (DIPs 1 and 2 on, 3 and 4 off)	0–5V, single input 50 kHz
	0–5V, two inputs 30 kHz (each input)
	0.5–4.5V, single input 40 kHz
	0.5–4.5V, two inputs 30 kHz (each input)
	0–15V, two inputs 22 kHz (each input)
Low threshold (all DIPs on)	–1 to +1V, single input 27 kHz
	–2 to +2V, single input 43 kHz
	≤–3 to ≥+3V, single input 60 kHz
	≤–2 to ≥+2V, two inputs 30 kHz (each input)

Rate Inputs

Sink	
Impedance	4.6 Kohms to +5 Vdc
Voltage	High 3.5 to 34.0, low 0.0 to 1.9 Vdc
Source (high)	
Impedance	2.3 Kohms to common
Voltage	High 3.5 to 17.0 Vdc, low 0.0 to 1.9 Vdc
Source (low)	
Impedance	2.3 Kohms to common
DC voltage	High 0.63 to 17.0 Vdc, low –17.0 to –0.6 Vdc
AC voltage	17 Vac (48V peak-peak) maximum

Control Inputs

Impedance	4.7 Kohms to +5 Vdc
Voltage	High +3.7 to +24 Vdc, low 0.0 to 0.9 Vdc
Response	Min, low 15 ms, min, high 15 ms

Transistor Outputs (x2 for 5715X-401; x4 for 5715X-405)

Type	NPN open collector with transient protection
Max. voltage (OFF state)	30 Vdc
Max. current (ON state)	200 mA at 1.3 Vdc

Communication

Type	RS-485
Format	One start bit, seven data bits (ASCII), one parity bit, one stop bit
Protocol	Opto-22 [®] compatible
Speed	300, 1200, 2400, 4800, 9600, 19200 baud
Parity	Odd, even, none (space transmitted, ignore received)

Analog Output (Models 5715X-401 Only)

Range	0–10 Vdc ± 0.2% at 5 mA
DAC resolution	12 bit

Connections

Type	Dual depluggable screw terminal strips
Conductor size	14–22 AWG (2.1–0.38 mm ²), 600V, solid, stranded or fused (preferred)

Count Controls/Preset Counters

E5-324-E Series **V12-T24-73**

Eclipse Series **V12-T24-75**

Product Overview

Digital Panel Meters are found anywhere a process variable needs to be indicated. Volts, current, pressure, volume, temperature and frequency are typical applications. The product's short depth makes it flexible and accommodating to panel builder needs. A variety of input and output options allows DPMs to be used virtually anywhere.

Typical Application

- Monitor current draw from motor to identify potential failures
- Display pressure reading from transducer with high-pressure alarm
- Display system voltage and detect under voltage or over voltage conditions

Product Selection Guide

Digital Panel Meters

	Characteristics	Panel Cutout in Inches (mm)	Page
E5-324-E	Bright, easy-to-read LED in 1/32 DIN package Programmable scaling of inputs Input for display-hold 24 Vdc power	0.870 x 1.772 (22 x 45)	V12-T24-73
Eclipse	Six-digit, super bright LED display Multiple models available: DC voltage, AC voltage, DC current, AC current, 5 A AC current, 4–20 mA/0–10 V process meter Various output options including relay, analog and RS-485	1.772 x 3.780 (45 x 96)	V12-T24-75

E5-324-E Series**Product Description**

Eaton's most compact panel meter provides an easy-to-read LED in a very small package.

Features

- Galvanic isolation with protection against incorrect polarity
- Automatic MIN/MAX value detection
- Freely programmable characteristic curve end points
- Input Range—
 - Single current measuring input (0/4–20 mA)
 - Single voltage measuring input (0/2–10V)
- Compact display for analog standard signals
- Display range –19.999 to 99.999 with zero blanking
- Modern industrial design
- Input for display-hold

Standards and Certifications

- UL recognized
- CE marked

Description	Catalog Number
LED digital panel meter, 24 x 48 mm	E5-324-E0402

Technical Data and Specifications**General Specifications**

Description	Specification
Supply voltage	10–30 Vdc, galvanically isolated with integrated protection against incorrect polarity
Current consumption	Max. 50 mA
Display	Five-digit display, red seven-segment LEDs; 0.31 in (8 mm) high
Measuring rate	Two measurements/second
Data backup	EEPROM
Housing	Housing for control panel 1.898 x 0.94 in (48 x 24 mm); acc. to DIN 43 700, RAL 7021, dark gray
Ambient temperature	14 to 122 °F (–10 to 50 °C)
EMC	According to EC EMC directive 89/36/EEC
Interference emissions	EN 61 000-6-4/EN 55011 Class B
Interference resistance	EN 61 000-6-2
Protection	IP65 (front)
Input current measurement	0–20 mA, 4–20 mA, voltage drop max. 1.5 Vdc
Input voltage measurement	0–10V, 2–10V
Input resistance approx.	1M ohm
Max. input signal level	30 Vdc
Control inputs	
High	4–30 Vdc
Low	0–2 Vdc
Resolution	14 bits
Error	<0.1% for the whole measuring range at an ambient temperature of 68 °F (20 °C)
Weight: Approx	1.76 oz (50 g)
Connection technique	Screw terminal, pitch 0.2 in (5.08 mm), seven-poles

Technical Data and Specifications

General Specifications

Description	Specification
Input Power	
AC powered models (57751-4XX)	
Input power	85–265 Vac, 47–63 Hz, 20 VA
External fuse	0.2 A, 250 Vac, time delay (T200 mA, 250 V)
Isolation dielectric strength	2300 Vac
Human Interface	
Display	±4 full digits
Type	0.56 in (14 mm) high, seven segment, red LED
Update time	0.4 seconds
Alarm	Flashing display
Indicator	One red LED program/calibration indicator with max./min. capture and hold
Data Retention	
Memory type	EEPROM, no batteries required
Duration	100 years
Signal Input	
DC voltage models (5770X-40X)	
Range	±199.9 m Vdc, ±1.999 Vdc, ±19.99 Vdc, ±199.9 Vdc, DIP switch selectable
Impedance	1M ohm
Overrange	750 Vdc/530 Vac except 220 Vdc/Vac on 199.9 mV range
Accuracy	±0.1% of reading, ±0.03% FS, ±0.5 digit, and ±80 PPM/°C
AC voltage models (5770X-41X)	
Range	199.9 m Vac, 1.999 Vac, 19.99 Vac, 199.9 Vac, DIP switch selectable, all ranges true rms
Frequency	40 to 1000 Hz
Impedance	1M ohm (capacity coupled)
Overrange	750 Vdc/530 Vac except 220 Vdc/Vac on 199.9 mV range
Accuracy	±0.5% of reading, ±0.13% FS, ±0.5 digit, ±180 PPM/°C for crest factor = 1; plus ±0.7% for crest factor = 1 to 3; and ±2.5% for crest factor = 5
DC current models (5770X-42X)	
Range	±199.9 µA DC, ±1.999 mA DC, ±19.99 mA DC, ±199.9 mA DC, DIP switch selectable
Impedance	199.9 mV/selected range
Overrange	30 mA (199.9 µA range), 100 mA (1.999 mA range), 300 mA (19.99 mA range), 1 A (199.9 mA range)
Accuracy	±0.1% of reading, ±0.03% FS, ±0.5 digit, and ±120 PPM/°C
AC current models (5770X-43X)	
Range	199.9 µA AC, 1.999 mA AC, 19.99 mA AC, 199.9 mA AC, DIP switch selectable, all ranges true rms
Frequency	40 to 1000 Hz
Impedance	199.9 mV/selected range (shunt output capacitive coupled)
Overrange	30 mA (1199.9 µA range), 100 mA (1.999 mA range), 300 mA (19.99 mA range), 1 A (199.9 mA range)
Accuracy	±0.5% of reading, ±0.13% FS, ±0.5 digit, and ±200 PPM/°C for crest factor = 1; plus ±0.7% for crest factor = 1 to 3; and ±2.5% for crest factor = 5

General Specifications, continued

Description	Specification
Signal Input, continued	
5 A AC models (5770X-44X)	
Range	5 A AC, true rms
Frequency	40 to 1000 Hz
Impedance	0.02 ohm (shunt output capacitive coupled)
Overrange	10 A maximum
Accuracy	$\pm 0.4\%$ of reading, $\pm 0.13\%$ FS, ± 0.5 digit, and ± 200 PPM/ $^{\circ}$ C for crest factor = 1; plus $\pm 0.7\%$ for crest factor = 1 to 3; and $\pm 2.5\%$ for crest factor = 5
Process models (5770X-45X)	
Range	4–20 mA DC, 0–10 Vdc, 1–5 Vdc; separate input terminals for voltage and current signals
Impedance	100 ohms (current input) and 1.27 Mohms (voltage input)
Overrange	50 mA maximum (current input) and 100 V maximum (voltage input)
Power output	24 Vdc $\pm 10\%$, 90 mA max, short-circuit protected
Accuracy	$\pm 0.1\%$ of reading, $\pm 0.03\%$ FS, ± 0.5 digit, and ± 80 PPM/ $^{\circ}$ C
Optional Outputs	
Relay board	
Dual relay	1 set of Form C contacts each
Contact rating	5 A, 250 Vac or 30 Vdc
Isolation dielectric strength	2300 Vac
Analog retransmission	
Output signals	4–20 mA (<750 ohms) and 0–10 V (>2500 ohms)
Accuracy	0.13% FS, 100 PPM/ $^{\circ}$ C, 0.07% FS change with 4–20 mA load, $\pm 0.3\%$ FS for 4–20 mA output, only after exposure to 85% relative humidity
Isolation dielectric strength	2300 Vac to signal inputs, relays and AC power input; 500 Vac to RS-485 and DC power inputs
RS-485 serial communication	
Baud rate	1200, 2400, 4800, 9600 or 19,200, programmable
Parity	Even, odd or no parity
Address range	00 to 99 decimal
Protocol	Opto 22 [®] compatible
Isolation dielectric strength	2300 Vac to signal inputs, relays, and AC power input; 500 Vac to analog outputs and DC power inputs
Environmental	
Operating environment	Indoor use to 2000 meters
Temperature	
Operating	32 to 122 $^{\circ}$ F (0 to 50 $^{\circ}$ C)
Storage	–4 to 158 $^{\circ}$ F (–20 to 70 $^{\circ}$ C)
Humidity	0 to 85% RH, noncondensing
Vibration	2.5 Gs, 30 to 200 Hz
Shock	30 Gs, 11 ms half sinewave
EMC/EMI	Per EN 61326-1 industrial
Front panel	NEMA 4X when mounted with gasket provided
Agency approval	CE EMC immunity and emissions requirements were met using shielded wiring on the RS-485, analog output and signal input lines. The shields were connected to earth ground at the Eclipse end of the shields. Conducted emissions requirements were met assuming that the AC signal input would not be connected directly to the AC mains. The measurement error during RF immunity testing was less than $\pm 5\%$ of full scale. In addition, models with an AC signal input had measurement error of less than +25% of full scale during RF immunity testing of the RS-485 at frequencies below 1 MHz.
Pollution degree 2	Overvoltage Category II

Description**Page**

Timers/Hour Meters

Product Selection Guide **V12-T24-80**Electronic Timers/Hour Meters **V12-T24-81**Electromechanical Timers/Hour Meters **V12-T24-86**Learn
Online**Product Overview**

Timers are used in applications where time itself is the main focus. These include simple knowledge of how long a machine has been running to determine machine maintenance, for example, (elapsed time) to knowing when to change an elevator cable (cable life and safety). Timers generally have the ability to stop and then to continue on from the point at which they stopped. Timer relays are used in applications where an output is required to make something happen at a predetermined point in time (to stop or start the process).

Typical Application

- Elapsed time indication for interval maintenance of construction and agricultural equipment
- Usage metering for determining charges on rental equipment
- Controlled process timing for adhesive application/ curing equipment

1/32 DIN LCD—Timers

Product Description

Simple battery-powered timers provide an easy-to-read LCD and a variety of timing display options.

Features

- Low price and high efficiency
- Large eight-digit LCD display, height of the figures 0.31 in (8 mm)
- Different time ranges from 0.1 second to 100,000 hours
- 0.1 second synchronization makes it suitable for very short activation times
- High voltage input for 10–260 Vac/Vdc voltage pulses
- IP65
- Screw terminals, RM 5 mm
- Lifetime of the battery approximately eight years
- Locking of the reset key
- Operating temperature 14 to 140 °F (–10 to 60 °C)

Standards and Certifications

- UL recognized
- CE marked

1/32 DIN LCD Timers

Description	Catalog Number
Eight-Digit LCD Timer, Battery Power	
Hours/minutes, 0.94 x 1.89 in (24 x 48 mm)	E5-224-C0440
Hours/minutes, 10–260V input, 0.94 x 1.89 in (24 x 48 mm)	E5-224-C0448
Minutes/seconds, 0.94 x 1.89 in (24 x 48 mm)	E5-224-C0450
Minutes/seconds, 10–260V input 0.94 x 1.89 in (24 x 48 mm)	E5-224-C0458

Technical Data and Specifications

General Specifications

Description	Specification
Power supply	Non-replaceable lithium battery (lifetime approximately eight years at 68 °F (20 °C))
Display	LCD, eight-digits
Figure size	0.31 in (8 mm) high
Counting direction	Adding
Display range	
Time range	99999h 59m (134)
Display	99999 - 59
Time range	99999.99h (134)
Display	99999 - 99
Time range	9999h 59m 59s (135)
Display	9999.59.59
Time range	9999999.9s (135)
Display	9999999.9
Reset	Manual and electrical
Timer inputs, DC versions (max. 30 Vdc)	
Timer input	NPN or PNP depending on the type
Switching level	
NPN low	0–0.7V
NPN high	3–30 Vdc
PNP low	0–0.7V
PNP high	4–30 Vdc
Counting start	
NPN	For low signal at the timer input
PNP	For high signal at the timer input

General Specifications, continued

Description	Specification
Timer inputs, high voltage version (10–260 Vdc/Vac)	
Timer input	Optocoupler input max. 30 Hz
Min. pulse time	16 ms
Switching level	
Low	0–2 Vdc/Vac
High	10–260 Vdc/Vac
Counting start	For high signal at the timer input
Time range change (mode)	
Contact input—open collector (switching at 0V)	
NPN low	0–0.7V
NPN high	3–5 Vdc
Time range	Depending on the circuit
Reset Input (only DC and high voltage)	
Minimum pulse time	
DC	50 ms
High voltage	10 ms
Contact input (DC)	
NPN low	0–0.7V
NPN high	3–30 Vdc
High voltage input	10–260 Vdc/Vac
Reset locking input (for DC and AC), electrical reset key locking	
Input not active	Reset key locked
Contact input	Open collector NPN (switching at 0V)
Switching level	
NPN low	0–0.7V
NPN high	3–5 Vdc
Interference emissions	EN 55011 Class B, EN 61 000-6-2, EN 61010 Section 1 (only AC versions)
Housing	Dark gray RAL 7021
Operating temperature	14 to 131 °F (–10 to 55 °C)
Ambient temperature	14 to 140 °F (–10 to 60 °C)
Storage temperature	–4 to 158 °F (–20 to 70 °C)
Protection	IP65 (from front)
Weight	Approx. 1.76 oz (50 g)

Approximate Dimensions in Inches (mm)

1/32 DIN LCD Timers

E42DI24/E42DIR Series

Product Description

Simple LCD hour meters with flexible input voltages

Features

- Solid-state hour meters
- Record and display up to 99,999.9 hours, rollover and continue timing
- EEPROM memory can retain data for 25+ years
- Time accumulation indicated by flashing hourglass icon
- Memory will arm only when power has been applied for 5 seconds

Standards and Certifications

- UL recognized
- CE compliant

Electromechanical Timers/Hour Meters

Product Overview

Eaton’s electromechanical hour meters are available in a variety of configurations and provide a cost-effective way to monitor equipment on time.

Features

- Non-resettable
- Always readable display

Standards and Certifications

- UL recognized
- CE

1/16 DIN Hour Meters

Product Description

Eaton's most cost-effective elapsed time meter. Features IP65 protection against water intrusion.

Typical Application

- General elapsed time
- Service interval for measurement systems—
 - Respiratory ventilators
 - Oxygen machines
 - Dialysis machines
- Small appliances
- UV lamps
- Display panels in cars

Features

- High shock resistance
- Without reset
- Small dimension
- Magnified figures
- Protection IP65
- Data retention if power is lost
- Long service life
- Optional mounting position

Standards and Certifications

- UL recognized

Technical Data and Specifications

General Specifications

Description	Specification
Electrical connection	Clamp terminal for cable diameter up to 14 AWG (2.5 mm ²), tightening torque max. 0.59 lb-ft (0.8 Nm)
Power consumption	
10–30 Vdc	Approx. 500 mW
100–130 Vdc	Approx. 750 mW
Rated voltages	100–130 Vac, 50 or 60 Hz
	10–30 Vdc
On time	100%
Display	
Seven at AC	99999.99
Eight at DC	999999.99
Accuracy	
AC	Supply frequency + 30 ms
DC	<0.003% (24h)
Count mode	Adding
Figure size	0.16 in (4 mm) high
Color of figures	White and red-on-black
Ambient temperature	5 to 122 °F (–15 to 50 °C)
Mounting position	Any

General Specifications, continued

Description	Specification
Protection	IP65
Housing	Plastic
Weight	1.7 oz (48 g)
Operating indicator of the running time meter	
AC	Fast rotating wheel with red dashes
DC	1/100h display turns continuously by 1-digit in 36 seconds
Test voltage	2000 Vac, 50 Hz for AC counters
Options	Further voltages on request
Color of housing	Gray

1/16 DIN Hour Meters

DIN Rail Adapter

71.1 Round Hour Meters

Product Description

Eaton's 6-T-3H hour meters are heavy-duty elapsed time meters with NEMA 4X protection.

Typical Application

- General elapsed time
- Utility vehicles
- Construction machines
- Generators
- Fork-lift trucks
- Car washes
- Outside areas

Features

- Six-digit hour meter for round panel cut-out
- Low cost
- High shock resistance
- Low power consumption
- Small dimension
- Magnified figures

- Waterproof
- NEMA Type 4X rating
- Data retention if power is lost
- Available in 50 pc. bulk package

Standards and Certifications

- UL recognized

Technical Data and Specifications

General Specifications

Description	Specification
Electrical connection	Flat pins 0.8 x 6.3
Power consumption	
AC	Max. 0.4 VA
12 Vdc	Max. 0.08W
48 Vdc	Max. 0.7W
Rated voltages	115 Vac \pm 10%, 50/60 Hz, 10–80 Vdc
On time	100%
Display	Six-digits, 99999.9h
Count mode	Adding
Figure size	0.14 in (3.5 mm) high
Reset	None
Ambient temperature	–22 to 149 °F (–30 to 65 °C)
Mounting position	Any
Protection	IP65
Housing	Plastic
Error	<0.02% over the full range

Dimensions

Approximate Dimensions in Inches (mm)

71.1 Round Hour Meter

Hour Meter/Counter

Product Description

Eaton's CEC series combination meters provide an event counter and elapsed time meter in one compact unit.

Typical Application

- General counting
- Pump control panels
- Service interval for measurement systems (respiratory ventilators, oxygen machines, dialysis machines)
- Small appliances
- UV lamps
- Display panels in cars

Features

- Combination counter consists of time meter and adding counter in one
- Without reset
- High shock resistance
- Magnified figures
- Protection IP52 (front)
- Data retention if power is lost
- Long service life

Standards and Certifications

- cRU[®]us certified
- CE marked

Fusion Integrated Machine Control

Product Description

The Fusion® Integrated Machine Control has advanced features, including a five-preset high speed counter with pre-warn, a totalizer with preset, a batch counter with preset and a ratemeter with high and low setpoints. Unique to the count control world, the Fusion has five output relays (rather than two), along with two transistors and two analog setpoint or follower outputs. Its ten available parameter sets of pre-loaded values are useful as recipes, for job-stacking or for a variety of application-specific purposes.

The Fusion has a multi-line alphanumeric display which can be programmed to show text messages, logic-generated prompts, alarms and machine status. Up to eight screens can be shown or optionally locked out. Count and time presets can be made view-only or editable. Preset entry is achieved with simple 0-9 keys on the front panel rather than complicated scrolling methods. The Fusion's real time clock/calendar may be displayed and/or used to time and date stamp printouts.

With its ladder logic, the Fusion is actually a 26 I/O controller, making it a complete control for many machines and processes, integrating the functions of external timers, pushbuttons, power supplies, indicating lights, control relays and other components in the same box.

Features

- User-configurable operator interface with back-lit LCD display and 18-button tactile feedback keypad
- High speed counter with five presets and pre-warn, totalizer, batch counter and ratemeter
- 10 parameter sets
- 13 digital inputs
- (2) 4–20 mA inputs
- (2) 0–10 V input
- (3) Form C, 2 Form A, 2 NPN transistor, (1) 4–20 mA, and (1) 0–10 V outputs
- RS-232 and RS-485 serial communications
- 100-line ladder logic processor for ultimate flexibility
- Configuration software included
- NEMA 4X enclosure

Features and Benefits

Feature	Customer Benefit
High speed count functions; including scaling, main counter, five presets, pre-warn, totalizer, batch and rate	"Canned" count functions offer flexibility and ease of setup in the desired units of measure.
High speed counting independent of ladder scan time	Precise and repeatable output response for high performance applications.
Flexible display with selectable character sizes (large, medium, small), run screens and ladder triggered messages	Minimizes confusion and operator errors as information can be tailored to what they need and in their language. Maintenance/management data can be separated. Different character sizes allow optimization of information displayed. Machine status information can be displayed allowing operators to take action.
Simple front panel layout and keypad. Four soft keys and six function keys can be used as inputs	Ease of use for operator. Numeric keypad allows for ease of preset and machine parameter entry. Function keys and soft keys allow easy and quick access to information and/or parameters needed by the operator and don't require using additional inputs. Eliminates cost associated with external pushbuttons and inputs.
Parameter sets	Allows for predefined recipes/jobs to be preloaded for the operator. Simplifies operator interaction and minimizes errors.
Programmable relay logic	Well understood programming method that allows flexibility in control functionality. Easy to tailor the control to various applications.
26 I/O (digital and analog)	Provides application flexibility. Analog inputs allow monitoring key process parameters. Analog outputs allow interfacing to drives and other control products.
Integrated solution	Reduced overall control costs, installation and commissioning. More flexible and capable than traditional count/control solutions but less complex than many PLC solutions.
Windows® and front panel programming	Ease of programming and configuration control.
RS-232 and RS-485 serial communication ports	Allow for direct connection to PC for programming, connection to Modbus® networks, interface to serial printer.
Robust type 4X package. DIN cutout and short depth 2.82 in (71.6 mm)	Suited for wet applications. Same cutout as the President Series—easing the migration. Short depth minimizes the cost and size of the machine panel or control enclosure.
Input power: 85–265 Vac 50/60 Hz or 10–30 Vdc models	Greatly reduces models required for different control voltages.
Output power: 12 Vdc at 75 mA, 24 Vdc at 100 mA	Eliminates the need for an external power supply for encoders, analog transducers, etc.
Depluggable screw terminals	Allows for ease of wiring and removal of control. Terminals are different sizes to error-proof installation.
Non-volatile memory and capacitor backed real time clock	Don't have to worry about a battery failing down the road.
Real time clock	Allows for control functions to be performed on day/time and allows for date/time stamping on printouts.
UL, cUL and CE marked	Ease of meeting machine agency requirements and robust EMC performance.

Standards and Certifications

- UL and cUL listed
- CE marked

TC Series

Product Description

Temperature controllers for a wide range of applications including heat treating, baking, packaging, furnace control, and chillers.

Features and Benefits

- Universal temperature inputs allow user to select from PT100 or J, K, T, E, B, R, S, N, L thermocouples without modification to the unit
- Advanced fuzzy modified PID technology minimizes overshoot/undershoot and allows quick and accurate responses
- Fast sampling rate of up to five times per second ensures accuracy in fast processes
- Standard IP65 front panel (TC48) provides protection in wash-down and other challenging environments

Standards and Certifications

- UL recognized
- CSA certified
- CE marked
- RoHS compliant

Technical Data and Specifications

General Specifications

Description	Specification
Power	
Power	90–250 Vac, 47–63 Hz, 10 VA (TC24), 12 VA (TC48/TC96), 5 W maximum (TCxx4) 11–26 Vac/Vdc, 10 VA (TC24), 12 VA (TC48/TC96), 5 W maximum (TCxx5)
Input	
Resolution	18 bits
Sampling rate	5 times/second
Temperature effect	±1.5 $\mu\text{V}/^\circ\text{C}$ for all inputs except mV input ±3.0 $\mu\text{V}/^\circ\text{C}$ for mV input
Sensor lead resistance effect	
T/C	0.2 $\mu\text{V}/\text{ohm}$
Three-wire RTD	2.6 $^\circ\text{C}/\text{ohm}$ of resistance difference of 2 leads
Two-wire RTD	2.6 $^\circ\text{C}/\text{ohm}$ of resistance sum of 2 leads
Burn-out current	200nA
Common mode rejection ratio (CMRR)	120dB
Normal mode rejection ratio (NMRR)	55dB
Sensor break detection	Sensor open for TC, RTD and mV inputs, sensor short for RTD input, below 1 mA for 4–20 mA, below 0.25 V for 1–5V input
Sensor break response time	Within 4 seconds for TC, RTD, and mV inputs; 0.1 second for 4–20 mA and 1–5 V inputs
Output	
Relay rating	2A/240 Vac; 200,000 life cycles for resistive load
Pulsed voltage	Source voltage 5 V, current limiting resistance of 66 ohms
Linear output	
Resolution	15 bits
Output regulation	0.02% for full load change
Output setting time	0.1 sec. (stable to 99.9%)
Isolation breakdown voltage	1000 Vac
Temperature effect	±0.01% of SPAN/ $^\circ\text{C}$

General Specifications, continued

Description	Specification
Alarm	
Alarm relay	Form C rating; 2 A/240 Vac; 200,000 life cycles for resistive load
Alarm functions	Dwell timer, deviation high/low alarm, deviation band high/low alarm, PV high/low alarm
Alarm mode	Normal, latching, hold, latching/hold
Dwell timer	0.1 to 4553.6 minutes
Environmental and Physical	
Operating temperature	14 to 122 °F (–10 to 50 °C)
Storage temperature	–40 to 140 °F (–40 to 60 °C)
Humidity	0–90% RH (noncondensing)
Altitude	2000 m max.
Pollution	Degree 2
Insulation resistance	20 Mohms min. (at 500 Vdc)
Dielectric strength	2000 Vac, 50/60 Hz for 1 minute
Vibration resistance	10–55 Hz, 10 m/s ² for 1 minute
Moldings	Flame resistant polycarbonate
Dimensions	TC96 = 1.88 in (48 mm) (W) x 3.77 in (96 mm) (H) x 3.15 in (80 mm) (D) TC48 = 1.88 in (48 mm) (W) x 1.88 in (48 mm) (H) x 4.56 in (116 mm) (D) TC24 = 1.96 in (50 mm) (W) x 1.04 in (26.5 mm) (H) x 4.35 (110.5 mm) (D)

Special Control Function Inputs

Input Characteristics

Type	Range	Accuracy at 25 °C	Input Impedance
J	–120 to 1000 °C (–184 to 1832 °F)	±2 °C	2.2 Mohms

Accessories and Encoders

Product Overview

Eaton offers a variety of accessories to complement our counting and control product offering.

Features

- Easy integration with Eaton counters

DIN Rail Adapter

Product Description

Allows mounting of 1/32 DIN front panel mounted products to DIN rail inside panel.

Features

- For panel-mounting all DIN size counters, timers and process indicators 0.94 x 1.89 in (24 x 48 mm) or 1.97 x 0.98 in (50 x 25 mm)
- Cut-out: 0.98 x 1.97 in (25 x 50 mm)
- For snap-on fitting to 35 mm top hat DIN rails
- Construction—
 - Mounting panel for counter: Chrome-plated sheet steel
 - Top hat DIN rail adapter: Glass fiber reinforced polyimide

Product Selection

DIN Rail Adapter

C-Face Ring Tachometer

Product Description

Provides sensing of motor speed when used with ratemeter/tachometer.

Features

- 5–16 Vdc input power
- NPN transistor output, 20 mA sinking capacity
- 60 pulses per resolution
- Zero speed pickup
- Variety of motor C-face sizes: 56, 184, 254, 256
- 39 to 225 °F (4 to 107 °C) operating temperature

Product Selection

47007_

C-Face Sensor

Description	Normally Stocked Item	Catalog Number
Motor size 56C	Yes	47007056
Motor size 143TC, 145TC, 182C, 184C	Yes	47007184
Motor size 184TC, 213C, 215C, 254C	Yes	47007215

Magnetic Pickup Sensor and Gear

Product Description

Sensor ideal for use with a variety of Eaton counters to show motor/shaft speed or measurement.

Features

30-Tooth Gear Accessory

- 1.6 in (41 mm) diameter
- 0.275 in (7 mm) bore diameter
- Mounting set screw included

Product Selection

47004400 and 28433400

Magnetic Pickup Sensor and Gear

Description	Catalog Number
30-tooth gear for magnetic pickup	28433400

Rotary Contactor—ES9513/ES9513RS

Product Description

Simple reed switch circuit to provide a contact closure for counting.

Features

- No power required
- Reed switch output models for electronic counters
- Contact closure output
- Leaf switch output models for electromechanical counters
- 5/16 in (7.9 mm) double shaft, 2400 rpm max. at 1:1 ratio
- 12 in (304.8 mm) wire leads

Product Selection

3910040

Rotary Contactor

Description	Rotary Contactor	Catalog Number

1:3 ratio leaf switch output	ES9513	40892401

Measuring Wheels

Product Description

Measuring wheel mounts to Eaton encoders and rotary contactor to allow for accurate measurement.

Features

- For use with shaft encoders and rotary contactors
- 12 in (304.8 mm) meter circumference
- Urethane, rubber and knurled edges available

Product Selection

Measuring Wheel

1 Ft Circumference Measuring Wheels

Description	Normally Stocked Item	Catalog Number
5/16 in bore, urethane rim	Yes	20144300KIT
3/8 in bore, urethane rim	—	20144303KIT

Cube Style Shaft Encoders

Product Description

Provides accurate pulse outputs for use with PLCs and counters.

Features

- 5–28 Vdc input power
- 80 mA current draw
- NPN transistor output, 250 mA sinking capacity
- Square wave output; (50-50 duty cycle)
- Single channel and quadrature models
- Up to 600 pulses per revolution
- 3/8 in (9.5 mm) double ended shaft
- ABEC three double sealed ball bearings
- Tapped holes for face or base mounting
- Military style connector

Note

^① 40460400 is shown, 40460402 has additional mounting plate for encoders.

Technical Data and Specifications**General Specifications**

Description	Specification
Electrical	
Input (38150)	
Voltage	9 to 16 Vdc
Current	60 mA max. at 16 Vdc
Ripple	2%
Input (38151)	
Voltage	5 to 28 Vdc
Current	60 mA nom., 100 mA max.
Ripple	≤2%
Output	
Type	Current sinking transistor with 1.5 Kohms pull-up
Sinking current	100 mA max.
Max. voltage at 100 mA	1.3 Vdc
Blocking voltage	40 Vdc max.
Polarity	Positive
Wave shape	Square wave
Pulse rate	
38150	1 to 20,000 pulse per second
38151	1 to 10,000 pulse per second
Rise time	<1 μs
Pulses per rev.	1 to 1270
Accuracy	Within ±0.1°
Environmental	
Operating temperature	32 to 167 °F (0 to 75 °C)
Vibration	3 Gs at 5 to 1000 cps
Shock	20 Gs, 10 ms
Mechanical	
Shaft speed	6000 RPM max.
Shaft rotation	CW or CCW
Bearings	Sealed ball bearings
Starting torque	0.1 oz-in
Moment of inertia	0.0025 ounce in-sec ²
Radial loading	40 pounds operating
Axial loading	30 pounds operating
Shaft	3/8 in (9.5 mm) dia.
Operating life	Up to 100,000 hours, depending on speed
Housing	Aluminum with black anodized finish. Sealed against dust, oil, vapor and moisture.
Mounting	Bottom or front face
Weight	1 lb (0.5 kg) max.
Connector	MS-3102E-14S-6P
Mating connector	MS-3106A-14S-6S with 10 ft (3 m) shielded cable and termination for electronic controls

Heavy-Duty Encoder

Right Angle, Size 20 Shaft Encoders

Product Description

Provides accurate pulse outputs for use with PLCs and counters.

Features

- 5–28 Vdc input power
- 100 mA current draw
- NPN transistor output, 100 mA sinking capacity
- Quadrature output, two square waves
- Up to 1800 pulses per revolution
- Flange mounting
- 3/8 in (9.5 mm) shaft diameter
- Double shielded ball bearings
- Military style connector

Technical Data and Specifications

General Specifications

Description	Specification
Electrical	
Input	
Voltage	5 to 28 Vdc (4.75 min., 28.0 max.)
Current	100 mA max. with no output load
Ripple	–2% peak to peak at 5 Vdc
Output	
Type	Quadrature current sinking transistors with 2.2 Kohms pull-up
Sinking current	100 mA max.
Max. voltage at 100 mA	1.3 Vdc
Blocking voltage	40 Vdc max.
Polarity	Positive
Wave shape	Square wave (50-50 duty cycle)
Pulse rate	0 to 100,000 pulses per second
Noise immunity	Tested to BS EN6100-4-2; IEC801-3; BS EN61000-4-4; DDENV 50141; DDENV 50204; BS EN55022 (with European compliance option)

General Specifications, continued

Description	Specification
Electrical, continued	
Output, continued	
Symmetry	180 electrical degrees ± 18
Quadrature phasing	90 electrical degrees ± 36
Minimum edge separation	54 electrical degrees
Rise time	$< 1 \mu\text{s}$
Pulses per rev.	1 to 1270
Accuracy	Within $\pm 0.1^\circ$
Environmental	
Operating temperature	32 to 158 °F (0 to 70 °C)
Vibration	20 Gs at 50 to 500 cps
Shock	75 Gs, 11 ms
Mechanical	
Shaft speed	8000 RPM max.
Shaft rotation	CW or CCW
Bearings	Double shielded ball bearings
Starting torque	1.0 oz-in typical
Moment of inertia	5.2×10^4 ounce in-sec ²
Radial and axial loading	(80 lbs max.) 20–40 lbs for bearing life of 1.5×10^9 revolutions
Maximum acceleration	1×10^5 radians/second ²
Shaft	0.375 in (9.5 mm) dia.
Housing	Black non-corrosive finish. Sealed against dust, oil, vapor and moisture.
Mounting	Flange mount
Weight	11 oz (312 g)
Connector	MS-3102E-14S-6P
Mating connector	MS-3106A-14S-6S with 10 ft (3 m) shielded cable and termination for electronic controls (Part No. 29665-300) Connector, clamp and bushing only (Part No. 29729-300)

Freight	V12-A1-3
Warranty	V12-A1-3

Selling Policy (Supersedes Selling Policy 25-000, dated February 20, 2006)

Terms and Conditions of Sale

The Terms and Conditions of Sale set forth herein, and any supplements which may be attached hereto, constitute the full and final expression of the contract for the sale of products or services (hereinafter referred to as Product(s) or Services by Eaton Corporation (hereinafter referred to as Seller) to the Buyer, and supersedes all prior quotations, purchase orders, correspondence or communications whether written or oral between the Seller and the Buyer. Notwithstanding any contrary language in the Buyer's purchase order, correspondence or other form of acknowledgment, Buyer shall be bound by these Terms and Conditions of Sale when it sends a purchase order or otherwise indicates acceptance of this contract, or when it accepts delivery from Seller of the Products or Services.

THE CONTRACT FOR SALE OF THE PRODUCTS OR SERVICES IS EXPRESSLY LIMITED TO THE TERMS AND CONDITIONS OF SALE STATED HEREIN. ANY ADDITIONAL OR DIFFERENT TERMS PROPOSED BY BUYER ARE REJECTED UNLESS EXPRESSLY AGREED TO IN WRITING BY SELLER. No contract shall exist except as herein provided.

Complete Agreement

No amendment or modification hereto nor any statement, representation or warranty not contained herein shall be binding on the Seller unless made in writing by an authorized representative of the Seller. Prior dealings, usage of the trade or a course of performance shall not be relevant to determine the meaning of this contract even though the accepting or acquiescing party had knowledge of the nature of the performance and opportunity for objection.

Quotations

Written quotations are valid for 30 days from its date unless otherwise stated in the quotation or terminated sooner by notice.

Verbal quotations, unless accepted, expire the same day they are made.

A complete signed order must be received by Seller within 20 calendar days of notification of award, otherwise the price and shipment will be subject to re-negotiation.

Termination and Cancellation

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges, including all costs plus profit.

Seller shall have the right to cancel any order at any time by written notice if Buyer breaches any of the terms hereof, becomes the subject of any proceeding under state or federal law for the relief of debtors, or otherwise becomes insolvent or bankrupt, generally does not pay its debts as they become due or makes an assignment for the benefit of creditors.

Appendix 1—Eaton Terms & Conditions

Effective Date: November 1, 2008

Prices

All prices are subject to change without notice. In the event of a price change, the effective date of the change will be the date of the new price or discount sheet, letter or telegram. All quotations made or orders accepted after the effective date will be on the new basis. For existing orders, the price of the unshipped portion of an order will be the price in effect at time of shipment.

Price Policy—Products and Services

When prices are quoted as firm for quoted shipment, they are firm provided the following conditions are met:

1. The order is released with complete engineering details.
2. Shipment of Products are made, and Services purchased are provided within the quoted lead time.
3. When drawings for approval are required for any Products, the drawings applicable to those Products must be returned within 30* calendar days from the date of the original mailing of the drawings by Seller. The return drawings must be released for manufacture and shipment and must be marked "APPROVED" or "APPROVED AS NOTED." Drawing re-submittals which are required for any other reason than to correct Seller errors will not extend the 30-day period.

* 60 days for orders through contractors to allow time for their review and approval before and after transmitting them to their customers.

If the Buyer initiates or in any way causes delays in shipment, provision of Services or return of approval drawings beyond the periods stated above, the price of the Products or Services will be increased 1% per month or fraction thereof up to a maximum of 18 months from the date of the Buyer's order. For delays resulting in shipment or provision of Services beyond 18 months from the date of the Buyer's order, the price must be renegotiated.

Price Policy—BLS

Refer to Price Policy 25-050.

Minimum Billing

Orders less than \$1,000 will be assessed a shipping and handling charge of 5% of the price of the order, with a minimum charge of \$25.00 unless noted differently on Product discount sheets.

Taxes

The price does not include any taxes. Buyer shall be responsible for the payment of all taxes applicable to, or arising from the transaction, the Products, its sale, value, or use, or any Services performed in connection therewith regardless of the person or entity actually taxed.

Terms of Payment

Products

Acceptance of all orders is subject to the Buyer meeting Seller's credit requirements. Terms of payment are subject to change for failure to meet such requirements. Seller reserves the right at any time to demand full or partial payment before proceeding with a contract of sale as a result of changes in the financial condition of the Buyer. Terms of Payment are either Net 30 days from the date of invoice of each shipment or carry a cash discount based on Product type. Specific payment terms for Products are outlined in the applicable Product discount schedules.

Services

Terms of payment are net within 30 days from date of invoice for orders amounting to less than \$50,000.00.

Terms of payment for orders exceeding \$50,000.00 shall be made according to the following:

1. Twenty percent (20%) of order value with the purchase order payable 30 days from date of invoice.
2. Eighty percent (80%) of order value in equal monthly payments over the performance period payable 30 days from date of invoice.

Except for work performed (i) under a firm fixed price basis or (ii) pursuant to terms of a previously priced existing contract between Seller and Buyer, invoices for work performed by Seller shall have added and noted on each invoice a charge of 3% (over and above the price of the work) which is related to Seller compliance with present and proposed environmental, health, and safety regulations associated with prescribed requirements covering hazardous materials management and employee training, communications, personal protective equipment, documentation and record keeping associated therewith.

Adequate Assurances

If, in the judgment of Seller, the financial condition of the Buyer, at any time during the period of the contract, does not justify the terms of payment specified, Seller may require full or partial payment in advance.

Delayed Payment

If payments are not made in accordance with these terms, a service charge will, without prejudice to the right of Seller to immediate payment, be added in an amount equal to the lower of 1.5% per month or fraction thereof or the highest legal rate on the unpaid balance.

Freight

Freight policy will be listed on the Product discount sheets, or at option of Seller one of the following freight terms will be quoted.

F.O.B.—P/S—Frt./Ppd. and Invoiced

Products are sold F.O.B. point of shipment freight prepaid and invoiced to the Buyer.

F.O.B.—P/S—Frt./Ppd. and Allowed

Products sold are delivered F.O.B. point of shipment, freight prepaid and included in the price.

F.O.B. Destination—Frt./Ppd. and Allowed

At Buyer's option, Seller will deliver the Products F.O.B. destination freight prepaid and 2% will be added to the net price.

The term "freight prepaid" means that freight charges will be prepaid to the accessible common carrier delivery point nearest the destination for shipments within the United States and Puerto Rico unless noted differently on the Product discount sheets. For any other destination contact Seller's representative.

Shipment and Routing

Seller shall select the point of origin of shipment, the method of transportation, the type of carrier equipment and the routing of the shipment.

If the Buyer specifies a special method of transportation, type of carrier equipment, routing, or delivery requirement, Buyer shall pay all special freight and handling charges.

When freight is included in the price, no allowance will be made in lieu of transportation if the Buyer accepts shipment at factory, warehouse, or freight station or otherwise supplies its own transportation.

Risk of Loss

Risk of loss or damage to the Products shall pass to Buyer at the F.O.B. point.

Concealed Damage

Except in the event of F.O.B. destination shipments, Seller will not participate in any settlement of claims for concealed damage.

When shipment has been made on an F.O.B. destination basis, the Buyer must unpack immediately and, if damage is discovered must:

1. Not move the Products from the point of examination.
2. Retain shipping container and packing material.
3. Notify the carrier in writing of any apparent damage.
4. Notify Seller representative within 72 hours of delivery.
5. Send Seller a copy of the carrier's inspection report.

Witness Tests/Customer Inspection

Standard factory tests may be witnessed by the Buyer at Seller's factory for an additional charge calculated at the rate of \$2,500 per day (not to exceed eight (8) hours) per Product type. Buyer may final inspect Products at the Seller's factory for \$500 per day per Product type.

Witness tests will add one (1) week to the scheduled shipping date. Seller will notify Buyer fourteen (14) calendar days prior to scheduled witness testing or inspection. In the event Buyer is unable to attend, the Parties shall mutually agree on a rescheduled date. However, Seller reserves the right to deem the witness tests waived with the right to ship and invoice Products.

Held Orders

For any order held, delayed or rescheduled at the request of the Buyer, Seller may, at its sole option (1) require payment to be based on any reasonable basis, including but not limited to the contract price, and any additional expenses, or cost resulting from such a delay; (2) store Products at the sole cost and risk of loss of the Buyer; and/or (3) charge to the Buyer those prices under the applicable price policy. Payment for such price, expenses and costs, in any such event, shall be due by Buyer within thirty (30) days from date of Seller's invoice. Any order so held delayed or rescheduled beyond six (6) months will be treated as a Buyer termination.

Drawing Approval

Seller will design the Products in line with, in Seller's judgment, good commercial practice. If at drawing approval Buyer makes changes outside of the design as covered in their specifications, Seller will then be paid reasonable charges and allowed a commensurate delay in shipping date based on the changes made.

Drawing Re-Submittal

When Seller agrees to do so in its quotation, Seller shall provide Buyer with the first set of factory customer approval drawing(s) at Seller's expense. The customer approval drawing(s) will be delivered at the quoted delivery date. If Buyer requests drawing changes or additions after the initial factory customer approval drawing(s) have been submitted by Seller, the Seller, at its option, may assess Buyer drawing charges. Factory customer approval drawing changes required due to misinterpretation by Seller will be at Seller's expense. Approval drawings generated by Bid Manager are excluded from this provision.

Warranty

Warranty for Products

Seller warrants that the Products manufactured by it will conform to Seller's applicable specifications and be free from failure due to defects in workmanship and material for one (1) year from the date of installation of the Product or eighteen (18) months from the date of shipment of the Product, whichever occurs first.

In the event any Product fails to comply with the foregoing warranty Seller will, at its option, either (a) repair or replace the defective Product, or defective part or component thereof, F.O.B. Seller's facility freight prepaid, or (b) credit Buyer for the purchase price of the Product. All warranty claims shall be made in writing.

Seller requires all non-conforming Products be returned at Seller's expense for evaluation unless specifically stated otherwise in writing by Seller.

This warranty does not cover failure or damage due to storage, installation, operation or maintenance not in conformance with Seller's recommendations and industry standard practice or due to accident, misuse, abuse or negligence. This warranty does not cover reimbursement for labor, gaining access, removal, installation, temporary power or any other expenses, which may be incurred in connection with repair or replacement.

This warranty does not apply to equipment not manufactured by Seller. Seller limits itself to extending the same warranty it receives from the supplier.

Appendix 1—Eaton Terms & Conditions

Effective Date: November 1, 2008

Extended Warranty for Products

If requested by the Buyer and specifically accepted in writing by Seller, the foregoing standard warranty for Products will be extended from the date of shipment for the period and price indicated below:

- 24 months—2% of Contract Price
- 30 months—3% of Contract Price
- 36 months—4% of Contract Price

Special Warranty (In and Out) for Products

If requested by the Buyer and specifically accepted in writing by Seller, Seller will, during the warranty period for Products, at an additional cost of 2% of the contract price, be responsible for the direct cost of:

1. Removing the Product from the installed location.
2. Transportation to the repair facility and return to the site.
3. Reinstallation on site.

The total liability of Seller for this Special Warranty for Products is limited to 50% of the contract price of the particular Product being repaired and excludes expenses for removing adjacent apparatus, walls, piping, structures, temporary service, etc.

Warranty for Services

Seller warrants that the Services performed by it hereunder will be performed in accordance with generally accepted professional standards.

The Services, which do not so conform, shall be corrected by Seller upon notification in writing by the Buyer within one (1) year after completion of the Services.

Unless otherwise agreed to in writing by Seller, Seller assumes no responsibility with respect to the suitability of the Buyer's, or its customer's, equipment or with respect to any latent defects in equipment not supplied by Seller. This warranty does not cover damage to Buyer's, or its customer's, equipment, components or parts resulting in whole or in part from improper maintenance or operation or from their deteriorated condition. Buyer will, at its cost, provide Seller with unobstructed access to the defective Services, as well as adequate free working space in the immediate vicinity of the defective Services and such facilities and systems, including, without limitation, docks, cranes and utility disconnects and connects, as may be necessary in order that Seller may perform its warranty obligations. The conducting of any tests shall be mutually agreed upon and Seller shall be notified of, and may be present at, all tests that may be made.

Warranty for Power Systems Studies

Seller warrants that any power systems studies performed by it will conform to generally accepted professional standards. Any portion of the study, which does not so conform, shall be corrected by Seller upon notification in writing by the Buyer within six (6) months after completion of the study. All warranty work shall be performed in a single shift straight time basis Monday through Friday. In the event that the study requires correction of warranty items on an overtime schedule, the premium portion of such overtime shall be for the Buyer's account.

Limitation on Warranties for Products, Services and Power Systems Studies

THE FOREGOING WARRANTIES ARE EXCLUSIVE EXCEPT FOR WARRANTY OF TITLE. SELLER DISCLAIMS ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

CORRECTION OF NON-CONFORMITIES IN THE MANNER AND FOR THE PERIOD OF TIME PROVIDED ABOVE SHALL CONSTITUTE SELLER'S SOLE LIABILITY AND BUYER'S EXCLUSIVE REMEDY FOR FAILURE OF SELLER TO MEET ITS WARRANTY OBLIGATIONS, WHETHER CLAIMS OF THE BUYER ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY), OR OTHERWISE.

Asbestos

Federal Law requires that building or facility owners identify the presence, location and quantity of asbestos containing material (hereinafter "ACM") at work sites. Seller is not licensed to abate ACM. Accordingly, for any contract which includes the provision of Services, prior to (i) commencement of work at any site under a specific Purchase Order, (ii) a change in the work scope of any Purchase Order, the Buyer will certify that the work area associated with the Seller's scope of work includes the handling of Class II ACM, including but not limited to generator wedges and high temperature gaskets which include asbestos materials. The Buyer shall, at its expense, conduct abatement should the removal, handling, modification or reinstallation, or some or all of them, of said Class II ACM be likely to generate airborne asbestos fibers; and should such abatement affect the cost of or time of performance of the work then Seller shall be entitled to an equitable adjustment in the schedule, price and other pertinent affected provisions of the contract.

Compliance with Nuclear Regulation

Seller's Products are sold as commercial grade Products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes. Further certification will be required for use of the Products in any safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

Returning Products

Authorization and shipping instructions for the return of any Products must be obtained from Seller before returning the Products.

When return is occasioned due to Seller error, full credit including all transportation charges will be allowed.

Product Notices

Buyer shall provide the user (including its employees) of the Products with all Seller supplied Product notices, warnings, instructions, recommendations, and similar materials.

Force Majeure

Seller shall not be liable for failure to perform or delay in performance due to fire, flood, strike or other labor difficulty, act of God, act of any governmental authority or of the Buyer, riot, embargo, fuel or energy shortage, car shortage, wrecks or delays in transportation, or due to any other cause beyond Seller's reasonable control. In the event of delay in performance due to any such cause, the date of delivery or time for completion will be extended by a period of time reasonably necessary to overcome the effect of such delay.

Liquidated Damages

Contracts which include liquidated damage clauses for failure to meet shipping or job completion promises are not acceptable or binding on Seller, unless such clauses are specifically accepted in writing by an authorized representative of the Seller at its headquarters office.

Patent Infringement

Seller will defend or, at its option, settle any suit or proceeding brought against Buyer, or Buyer's customers, to the extent it is based upon a claim that any Product or part thereof, manufactured by Seller or its subsidiaries and furnished hereunder, infringes any United States patent, other than a claim of infringement based upon use of a Product or part thereof in a process, provided Seller is notified in reasonable time and given authority, information and assistance (at Seller's expense) for the defense of same. Seller shall pay all legal and court costs and expenses and court-assessed damages awarded therein against Buyer resulting from or incident to such suit or proceeding. In addition to the foregoing, if at any time Seller determines there is a substantial question of infringement of any United States patent, and the use of such Product is or may be enjoined, Seller may, at its option and expense: either (a) procure for Buyer the right to continue using and selling the Product; (b) replace the Product with non-infringing apparatus; (c) modify the Product so it becomes non-infringing; or (d) as a last resort, remove the Product and refund the purchase price, equitably adjusted for use and obsolescence. In no case does Seller agree to pay any recovery based upon its Buyer's savings or profit through use of Seller's Products whether the use be special or ordinary. The foregoing states the entire liability of Seller for patent infringement.

The preceding paragraph does not apply to any claim of infringement based upon: (a) any modification made to a Product other than by Seller; (b) any design and/or specifications of Buyer to which a Product was manufactured; or (c) the use or combination of Product with other products where the Product does not itself infringe. As to the above-identified claim situations where the preceding paragraph does not apply, Buyer shall defend and hold Seller harmless in the same manner and to the extent as Seller's obligations described in the preceding paragraph. Buyer shall be responsible for obtaining (at Buyer's expense) all license rights required for Seller to be able to use software products in the possession of Buyer where such use is required in order to perform any Service for Buyer.

With respect to a Product or part thereof not manufactured by Seller or its subsidiaries, Seller will attempt to obtain for Buyer, from the supplier(s), the patent indemnification protection normally provided by the supplier(s) to customers.

Limitation of Liability

THE REMEDIES OF THE BUYER SET FORTH IN THIS CONTRACT ARE EXCLUSIVE AND ARE ITS SOLE REMEDIES FOR ANY FAILURE OF SELLER TO COMPLY WITH ITS OBLIGATIONS HEREUNDER.

NOTWITHSTANDING ANY PROVISION IN THIS CONTRACT TO THE CONTRARY, IN NO EVENT SHALL SELLER BE LIABLE IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE FOR DAMAGE TO PROPERTY OR EQUIPMENT OTHER THAN PRODUCTS SOLD HEREUNDER, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF PRODUCTS, COST OF

CAPITAL, CLAIMS OF CUSTOMERS OF THE BUYER OR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER, REGARDLESS OF WHETHER SUCH POTENTIAL DAMAGES ARE FORESEEABLE OR IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

THE TOTAL CUMULATIVE LIABILITY OF SELLER ARISING FROM OR RELATED TO THIS CONTRACT WHETHER THE CLAIMS ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE, SHALL NOT EXCEED THE PRICE OF THE PRODUCT OR SERVICES ON WHICH SUCH LIABILITY IS BASED.

FP-5000 Feeder Relay	V12-T10-43
FP50-AR1600M	V12-T17-11, V12-T22-6
FP75-AR3000B	V12-T17-11, V12-T22-6
FPE	V12-T22-6
FPS-50 Federal Pacific Breaker	V12-T17-50
FPS-75 Federal Pacific Breaker	V12-T17-50
Freedom Starter—IEC—Replacement Capabilities	
Coils	V12-T13-42–V12-T13-46
Contact Kits	V12-T13-42–V12-T13-46
Current Transformer	V12-T13-42–V12-T13-45
Magnet Frame Armature	V12-T13-42–V12-T13-46
Overload Relays	V12-T13-42–V12-T13-46
Freedom Starter—NEMA—Replacement Capabilities	
Coils	V12-T13-38–V12-T13-41
Contact Kits	V12-T13-38–V12-T13-41
Current Transformer	V12-T13-40
Magnet Frame Armature	V12-T13-38–V12-T13-41
Overload Relays	V12-T13-40, V12-T13-41

Freedom Unitrol	V12-T14-3, V12-T14-9
Add-on Structures	V12-T14-9
Feeder Breaker Units	V12-T14-9
Handle Mechanism	V12-T14-4
MCC Product Description	V12-T14-9
MCC Replacement Capabilities	V12-T14-9
Replacement Starter Units	V12-T14-9
Front Panel Retrofits with IQ Devices and PowerNet for DHP, VCP, VCP-W	V12-T17-59
FS Out-of-Production Circuit Breaker	V12-T3-10, V12-T3-11
FT	V12-T13-29
Fuse Base	V12-T7-2
Fuse Block	V12-T7-2
Fused WLI Switch	V12-T17-65
Fuses	V12-T18-1–V12-T18-8
Fusible Bolt-on Units	V12-T9-11
Fusible Plug-in Units	V12-T9-5, V12-T9-9
Pow-R-Way	V12-T9-5
Standard Plug-in and Low Impedance Busway	V12-T9-5
Fusible Switch Plug-in Units	V12-T9-12
Fusion Integrated Machine Control	V12-T24-91–V12-T24-95
FV Multispeed	V12-T13-88

G

G Allis-Chalmers Breaker	V12-T17-42
G Direct Handle Mechanism	V12-T3-95, V12-T3-111

Type CH Loadcenters and Circuit Breakers	
Accessories	V12-T5-7

Appendix 2—Alphabetical Product Index

Handle Mechanism for Motor Control Center Buckets	
11-300	V12- T14 -4
5 Star/Series 2100	V12- T14 -4
9800	V12- T14 -4
F10	V12- T14 -4
Freedom Unitrol	V12- T14 -4
Type W	V12- T14 -4
Handle Mechanisms	V12- T3 -95–V12- T3 -111
AMT Vari-Depth	V12- T3 -95
Direct (Close-Coupled)	V12- T3 -111
Euro IEC Direct	V12- T3 -95, V12- T3 -111
Extensions	V12- T3 -112
Flex-Shaft Type	V12- T3 -95
G Direct	V12- T3 -95, V12- T3 -111
G-Frame Vari-Depth	V12- T3 -95
Series C Rotary and Universal Rotary	V12- T3 -95, V12- T3 -109
Slide Plate Type	V12- T3 -95
Type AMT Vari-Depth	V12- T3 -95
Type MC Motor Control	V12- T3 -95, V12- T3 -103
Type SM Safety Handle	V12- T3 -95
Universal Direct	V12- T3 -95, V12- T3 -111
Universal Rotary Type	V12- T3 -95, V12- T3 -109
Vari-Depth Type	V12- T3 -95
Handle Ties	
Accessories	
Type CH Loadcenters and Circuit Breakers	V12- T5 -7
Type BR Loadcenters and Circuit Breakers	
Accessories	V12- T5 -16, V12- T5 -18
Harmonic Correction Unit	V12- T21 -4
Hazardous Location — Dry-Type Transformers	V12- T8 -2
HBAW	V12- T3 -7
HBAX	V12- T3 -7
HCA Molded-Case Circuit Breakers	V12- T3 -10
HCA Replacement Breaker	V12- T3 -10
HCDP Panelboard	V12- T4 -7, V12- T4 -9
HCL	V12- T18 -3
Heater Selection for Types A and B Overload Relays	
Sizes 00, 0, 1 and 2 Starters	V12- T13 -30, V12- T13 -31
Sizes 3 and 4 Starters	V12- T13 -32
Sizes 5 and 6 Starters	V12- T13 -32
Heaters, A200	V12- T13 -30–V12- T13 -32
Heaters, Citation	V12- T13 -9–V12- T13 -21
Heaters, V201	V12- T13 -36
HF Out-of-Production Circuit Breaker	V12- T3 -10, V12- T3 -81, V12- T3 -88
HFA Out-of-Production Circuit Breaker	V12- T3 -10, V12- T3 -11, V12- T3 -81, V12- T3 -88
HFB Molded-Case Circuit Breakers	V12- T3 -10, V12- T3 -16, V12- T3 -117, V12- T3 -120
HFB Replacement Breaker	V12- T3 -10, V12- T3 -11, V12- T3 -119
HFC Out-of-Production Circuit Breaker	V12- T3 -11
HFC Out-of-Production Cutler-Hammer Breaker	V12- T3 -10
HFD	V12- T14 -16
HFD Series C Breaker	V12- T3 -10, V12- T3 -11
High Frequency Bus	V12- T9 -3
High Resistance Grounding System—Low Voltage	V12- T2 -3
HJD	V12- T14 -16
HJD Series C Breaker	V12- T3 -11
HK Out-of-Production Circuit Breaker	V12- T3 -11, V12- T3 -82
HKA Molded-Case Circuit Breakers	V12- T3 -11, V12- T3 -25, V12- T3 -122
HKA Replacement Breaker	V12- T3 -11
HKB Molded-Case Circuit Breakers	V12- T3 -11, V12- T3 -21, V12- T3 -123
HKB Replacement Breaker	V12- T3 -11
HKD	V12- T14 -16
HKD Series C Breaker	V12- T3 -11
HKL Out-of-Production Circuit Breaker	V12- T3 -11, V12- T3 -82
HLA Molded-Case Circuit Breakers	V12- T3 -11, V12- T3 -34– V12- T3 -39, V12- T3 -124–V12- T3 -126
HLA Replacement Breaker	V12- T3 -11, V12- T3 -80, V12- T3 -124–V12- T3 -126
HLB Molded-Case Circuit Breakers	V12- T3 -11, V12- T3 -29, V12- T3 -126
HLB Replacement Breaker	V12- T3 -11, V12- T3 -126–V12- T3 -128
HLC Molded-Case Circuit Breakers	V12- T3 -11, V12- T3 -49, V12- T3 -128
HLC Replacement Breaker	V12- T3 -11, V12- T3 -128
HLCA Molded-Case Circuit Breakers	V12- T3 -49, V12- T3 -128
HLCA Replacement Breaker	V12- T3 -128
HLCC Molded-Case Circuit Breakers	V12- T3 -49, V12- T3 -128
HLCC Replacement Breaker	V12- T3 -128
HLCCA Molded-Case Circuit Breakers	V12- T3 -49, V12- T3 -128
HLCCG Molded-Case Circuit Breakers	V12- T3 -50, V12- T3 -128
HLCCGA Molded-Case Circuit Breakers	V12- T3 -50, V12- T3 -128
HLCG Molded-Case Circuit Breakers	V12- T3 -50, V12- T3 -128
HLCGA Molded-Case Circuit Breakers	V12- T3 -50, V12- T3 -129
HLD Series C Breaker	V12- T3 -11
HLE	V12- T18 -2–V12- T18 -4
HLE/HCL	V12- T18 -3
HLM Out-of-Production Circuit Breaker	V12- T3 -11, V12- T3 -12, V12- T3 -82
HMA Molded-Case Circuit Breakers	V12- T3 -12, V12- T3 -40, V12- T3 -42, V12- T3 -129
HMA Replacement Breaker	V12- T3 -12, V12- T3 -129

Appendix 2—Alphabetical Product Index

Replacement Digitrip RMS Trip Units	V12- T17 -21, V12- T17 -22	RF Panelboard Replacement	
Replacement Feeder Breaker Units		Breakers	V12- T3 -80, V12- T3 -81, V12- T3 -84
11-300	V12- T14 -5	RF Replacement Breaker	V12- T3 -156
5 Star/Series 2100	V12- T14 -10	RFA Molded-Case Circuit Breakers	V12- T3 -156
9800	V12- T14 -6	RFA Panelboard Replacement	
Advantage	V12- T14 -11	Breakers	V12- T3 -80, V12- T3 -81, V12- T3 -84
F10	V12- T14 -8	RFK	V12- T9 -9
F2100	V12- T14 -12	RH	V12- T17 -22
Freedom Unitrol	V12- T14 -9	RHF Molded-Case Circuit Breakers	V12- T3 -156, V12- T3 -157
Type W	V12- T14 -7	RHF Panelboard Replacement Breakers	V12- T3 -80, V12- T3 -81, V12- T3 -85
Replacement Fuse Base	V12- T9 -5	RHFA Molded-Case Circuit Breakers	V12- T3 -157
Replacement Guide		RHFA Panelboard Replacement Breakers	V12- T3 -80, V12- T3 -81, V12- T3 -84
Current Limiting	V12- T3 -13, V12- T3 -14	RHK Molded-Case Circuit Breakers	V12- T3 -157, V12- T3 -158
Series C	V12- T3 -10–V12- T3 -12	RHK Panelboard Replacement Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -86
Replacement Molded-Case Circuit		RHKL Molded-Case Circuit Breakers	V12- T3 -158
Breakers and Parts	V12- T2 -3	RHKL Panelboard Replacement	
Replacement Parts for MCCs	V12- T14 -13	Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -86
Replacement Power Breakers	V12- T2 -2	RHLM Molded-Case Circuit Breakers	V12- T3 -158, V12- T3 -159
Replacement Starter Units		RHLM Panelboard Replacement	
11-300 MCCs	V12- T14 -5	Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -87
5 Star/Series 2100 MCCs	V12- T14 -10	RJ Molded-Case Circuit Breakers	V12- T3 -159
9800 MCCs	V12- T14 -6	RJ Panelboard Replacement	
Advantage MCCs	V12- T14 -11	Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -85
F10 MCCs	V12- T14 -8	RK Molded-Case Circuit Breakers	V12- T3 -159, V12- T3 -160
F2100 MCCs	V12- T14 -12	RK Panelboard Replacement	
Freedom Unitrol MCCs	V12- T14 -9	Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -85
Type W MCCs	V12- T14 -7	RKL Molded-Case Circuit Breakers	V12- T3 -160
Replacement Vacuum Breakers	V12- T2 -2	RKL Panelboard Replacement	
Replacement Vacuum Contactors	V12- T13 -94	Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -85
Residential Meter Stacks		RL Siemens Breaker	V12- T17 -48
Ring	V12- T6 -7	RLM Molded-Case Circuit Breakers	V12- T3 -160, V12- T3 -161
Resistor, Starting and Field Discharge		RLM Panelboard Replacement	
for Synchronous	V12- T13 -79, V12- T13 -80, V12- T13 -82	Breakers	V12- T3 -80, V12- T3 -82, V12- T3 -86
Retro-build — see Network Protectors		RLX Siemens-Allis Breaker	V12- T17 -48
Retrofit Interior Kits		RMCF Motor Control Center	
Type CH		Replacement Breakers	V12- T3 -88, V12- T3 -89
Loadcenters and Circuit Breakers	V12- T5 -27	RMCFA Motor Control Center	
Retrofit Kits		Replacement Breakers	V12- T3 -88, V12- T3 -89
Trip Units	V12- T2 -2	RMCHF Motor Control Center	
Retrofit Kits, Series C for Motor Control Centers	V12- T3 -91	Replacement Breakers	V12- T3 -88, V12- T3 -90
Retrofit Services		RMCHFA Motor Control Center	
Low Voltage Breaker Drawout		Replacement Breakers	V12- T3 -88, V12- T3 -90
Vacuum Starter Replacement	V12- T17 -12, V12- T17 -13	RMS 500	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Retrofits		RMS 510	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Motor Control Center	V12- T2 -2	RMS 600	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Motor Control Center Buckets	V12- T2 -2	RMS 610	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Panelboards	V12- T4 -21	RMS 700	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Power Breaker Trip Units	V12- T17 -21, V12- T17 -22	RMS 800	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
SPD	V12- T2 -3	RMS 810	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Submetering	V12- T2 -3	RMS 910	V12- T17 -21, V12- T17 -23, V12- T17 -25–V12- T17 -28
Retrofit—Trip System	V12- T2 -2	RNA	V12- T13 -89
Reversing/Assignment Contactor	V12- T13 -68		
RF Molded-Case Circuit Breakers	V12- T3 -155, V12- T3 -156

Timers and Hour Meters	V12-T24-79–V12-T24-90
Electromechanical	V12-T24-86–V12-T24-90
Electronic	V12-T24-81–V12-T24-85
Totalizers	V12-T24-2–V12-T24-55
Electromechanical	V12-T24-25–V12-T24-34
Electronic	V12-T24-35–V12-T24-55
Mechanical	V12-T24-4–V12-T24-24
Revolution	V12-T24-11–V12-T24-24
Stroke	V12-T24-4–V12-T24-10
TP-1	V12-T8-2
Transfer Switches —	
see Automatic Transfer Switches	V12-T20-1
Transformers	
Accessories	V12-T8-3
Case Parts, Ventilated Units	V12-T8-4
Rodent Screen	V12-T8-3
Terminal Lug	V12-T8-3
Buck-Boost	V12-T8-2
Class 1, Division 2	V12-T8-4
Dry-Type	V12-T8-4
DS-3	V12-T8-2
DT-3	V12-T8-2
EP	V12-T8-2
EPT	V12-T8-2
KT	V12-T8-2
MD	V12-T8-2
MPC	V12-T8-2
MTA	V12-T8-2
MTC	V12-T8-2
NEMA TP-1	V12-T8-2
Hazardous Location	V12-T8-2
Industrial Control (MTA and MTC)	V12-T8-2
Mini-Power Center (MPC)	V12-T8-2
Motor Drive Isolation (MD)	V12-T8-2
Nonlinear (KT)	V12-T8-2
Shielded Isolation	V12-T8-2
TP-1	V12-T8-2
Transient voltage surge suppression (TVSS)	V12-T9-14
Trip System Upgrades	V12-T2-2
Trip Unit Features for Trip Unit Retrofit Kits	V12-T17-20
Trip Unit Retrofit Kit Applications	V12-T17-17
Trip Unit Retrofit Kit Catalog Number Development	V12-T17-28

Appendix 2—Alphabetical Product Index

Trip Unit Retrofit Kit Ratings	V12- T17 -17	Types LC, LCC, LCA, LCCA, MARK 75 Types HLC, HLCC, HLCA, HLCCA SELTRONIC	V12- T3 -49
Trip Unit Retrofit Kits	V12- T17 -17–V12- T17 -52	Types LCG, LCCG, LCGA, LCCGA, MARK 75 Types HLCG, HLCCG, HLCGA, HLCCGA SELTRONIC	V12- T3 -50, V12- T3 -51
Accessories	V12- T17 -28	Types MC, MCC, MCA, MCCA, MARK 75 Types HMC, HMCC, HMCA, HMCCA SELTRONIC	V12- T3 -52
Rating Plugs	V12- T17 -24–V12- T17 -27	Types MCG, MCCG, MCGA, MCCGA and MARK 75 Types HMCG, HMCCG, HMCGA, HMCCGA SELTRONIC	V12- T3 -53
Retrofit Kits		Types NC, NCA, NCG, NCGA, MARK 75 Type HNC, HNCA, HNCG, HNCGA SELTRONIC	V12- T3 -54, V12- T3 -55
Allis-Chalmers LA Breakers	V12- T17 -41, V12- T17 -42	Types PC, PCA, PCC, PCCA SELTRONIC	V12- T3 -56
Federal Pacific Breakers	V12- T17 -49, V12- T17 -50	Types PCG, PCGA, PCCG, PCCGA SELTRONIC	V12- T3 -58
General Electric Breakers	V12- T17 -37–V12- T17 -40		
ITE Breakers	V12- T17 -43–V12- T17 -46		
Other Manufacturers	V12- T17 -51		
Siemens and Siemens-Allis Breakers	V12- T17 -47, V12- T17 -48		
Westinghouse Breakers	V12- T17 -30–V12- T17 -36		
Trip Units	V12- T17 -21, V12- T17 -22		
Trip Unit Retrofit Kits Accessories	V12- T17 -28		
Trip Unit Retrofit Kits Definitions for Replacement and Upgrade Capabilities	V12- T17 -19		
Trip Unit Retrofit Kits Past Technology	V12- T17 -20		
Trip Unit Retrofit Kits Trip Unit Features	V12- T17 -20		
Trip Unit Retrofit Kits with Digitrip RMS Trip Units	V12- T17 -21–V12- T17 -27		
Trip Unit Retrofits	V12- T2 -2		
Trip, Microprocessor-Based	V12- T10 -30		
TRI-PAC Breakers	V12- T3 -13		
Troubleshooting	V12- T22 -5		
Truck Cell, SCR	V12- T13 -97		
True rms	V12- T17 -18		
Type A Overload Relay	V12- T13 -28		
Type B Overload Relay	V12- T13 -27		
Type CH			
Loadcenters and Circuit Breakers			
Renovation Loadcenter	V12- T5 -25		
Retrofit Interior Kits	V12- T5 -27		
Surge Panel	V12- T5 -29		
Type F Magnetic Contactor	V12- T13 -3		
Type FT Fast Trip, Class 10 Overload Relay	V12- T13 -29		
Type H, Medium Voltage Contactor	V12- T13 -91		
Type K, Medium Voltage Contactor	V12- T13 -91		
Type MC Motor Control Handle Mechanisms	V12- T3 -95, V12- T3 -103		
Type N Control	V12- T13 -3		
Type N Starter Replacement Capabilities			
Coils	V12- T13 -22		
Contact Kits	V12- T13 -22		
Type S 511 AC and DC Brakes	V12- T13 -63		
Type SM Safety Handle Mechanisms	V12- T3 -101		
Type W Motor Control Centers			
Add-on Structures	V12- T14 -7		
Feeder Breaker Units	V12- T14 -7		
Handle Mechanism	V12- T14 -4		
MCCs with Series C Retrofit Kits	V12- T3 -91, V12- T14 -16		
		Types LC, LCC, LCA, LCCA, MARK 75 Types HLC, HLCC, HLCA, HLCCA SELTRONIC	V12- T3 -49
		Types LCG, LCCG, LCGA, LCCGA, MARK 75 Types HLCG, HLCCG, HLCGA, HLCCGA SELTRONIC	V12- T3 -50, V12- T3 -51
		Types MC, MCC, MCA, MCCA, MARK 75 Types HMC, HMCC, HMCA, HMCCA SELTRONIC	V12- T3 -52
		Types MCG, MCCG, MCGA, MCCGA and MARK 75 Types HMCG, HMCCG, HMCGA, HMCCGA SELTRONIC	V12- T3 -53
		Types NC, NCA, NCG, NCGA, MARK 75 Type HNC, HNCA, HNCG, HNCGA SELTRONIC	V12- T3 -54, V12- T3 -55
		Types PC, PCA, PCC, PCCA SELTRONIC	V12- T3 -56
		Types PCG, PCGA, PCCG, PCCGA SELTRONIC	V12- T3 -58
		U	
		UCTB	V12- T9 -7
		UEC	V12- T9 -7
		Undervoltage Release (UVR)	V12- T3 -3
		Unibus	V12- T9 -3
		UNIPAK	V12- T21 -4
		UNIPUMP	V12- T21 -4
		UNIVAR and Filter	V12- T21 -4
		Universal Cable Tap Box	V12- T9 -7
		Universal Direct Handle Mechanisms	V12- T3 -111
		Universal Module	V12- T10 -36
		Universal Mount IQ Energy Sentinel	V12- T10 -26
		Universal Remote Power Racking	V12- T17 -61
		Universal Rotary Type Handle Mechanisms	V12- T3 -95, V12- T3 -109
		Universal RTD Module	V12- T10 -36, V12- T10 -43
		Upgrades	
		Medium Voltage Starter	V12- T2 -2
		URTD	V12- T10 -36
		V	
		V201 and V200 Vacuum Contactors and Starters	
		Heaters	V12- T13 -36
		vacuum	V12- T13 -93
		Vacuum Break Roll-out	V12- T13 -89
		Vacuum Break Slide-out	V12- T13 -89
		Vacuum Contactor Replacement Coils	V12- T13 -36
		Vacuum Replacement Breakers	V12- T2 -2, V12- T17 -60
		Allis-Chalmers AM	V12- T17 -60
		Allis-Chalmers FA	V12- T17 -60
		Allis-Chalmers FB	V12- T17 -60
		Allis-Chalmers FC	V12- T17 -60
		Allis-Chalmers MA	V12- T17 -60
		Allis-Chalmers RUPTAIR	V12- T17 -60
		Federal Pacific DST	V12- T17 -60
		Federal Pacific DST-2	V12- T17 -60
		General Electric AM13.8	V12- T17 -60

Appendix 2—Alphabetical Product Index

Vacuum Replacement Breakers, continued

General Electric AM15	V12- T17 -60
General Electric AM4.16	V12- T17 -60
General Electric AM5	V12- T17 -60
General Electric AM7.2	V12- T17 -60
General Electric AM7.5	V12- T17 -60
General Electric MagneBlast	V12- T17 -60
ITE	V12- T17 -60
ITE 15HK	V12- T17 -60
ITE 5HK	V12- T17 -60
ITE 5HV	V12- T17 -60
McGraw & Edison PSD-15	V12- T17 -61
McGraw & Edison WSA-15	V12- T17 -61
McGraw & Edison WSA-5	V12- T17 -61
Vacuum Replacement Breakers with MOC Operators	V12- T17 -55, V12- T17 -56, V12- T17 -60–V12- T17 -62
Vacuum Replacement Breakers with <i>SURE CLOSE</i>	V12- T17 -62
Vacuum Starter Replacement for DB Breakers	V12- T17 -3
Vacuum Starter Replacement for DSII Breakers	V12- T17 -7
Vacuum Starter Retrofit—DB25-LV-VSR	V12- T17 -3
Vacuum Starter Structures	V12- T13 -94
Vacuum Starters	V12- T13 -36
Vacuum, Roll-out (standard)	V12- T13 -89
Vacuum, Slide-out (standard)	V12- T13 -89
Vari-Depth Handle Mechanism	V12- T3 -95–V12- T3 -98
VCP Breaker Renewal Parts	V12- T17 -57
VCP Medium Voltage Switchgear Assemblies and Power Circuit Breakers	V12- T17 -57
VCP Remanufactured Breakers	V12- T17 -57
VCP Switchgear Fluidized Switchgear Bus	V12- T17 -57
VCP-W ANSI and IEC Rating Table	V12- T17 -58
VCP-W Breaker Renewal Parts	V12- T17 -58
VCP-W Match and Lineup Cubicles	V12- T17 -58
VCP-W Medium Voltage Switchgear Assemblies and Power Circuit Breakers	V12- T17 -58
VCP-W Switchgear Fluidized Switchgear Bus	V12- T17 -58
VCP-W Vacuum Breakers	V12- T17 -58
Vectrol Energy Saver	V12- T13 -71
Vectrol Startrol	V12- T13 -71
Vectrol Startrol Power Miser	V12- T13 -71
Vectrol VMS	V12- T13 -71
Vertical Retrofit RMS Replacement Trip Units for Other Breakers	V12- T17 -23
Victory Bus Duct	V12- T9 -3
VLT-5	V12- T13 -72–V12- T13 -75
VMAN	V12- T13 -89
VMS	V12- T13 -71
Volt Trap	V12- T13 -84
VR-Series Medium Voltage Vacuum Replacement (MVVR) Breakers	V12- T22 -6
VSR, DB	V12- T17 -3
VSR, DSII	V12- T17 -7

W

W10B Panelboard	V12- T4 -7
W10B Panelboard, Replacement Breaker	V12- T4 -7
W10P Panelboard	V12- T4 -7
W10P Panelboard, Replacement Breaker	V12- T4 -7
W210	V12- T13 -90
W22B Panelboard	V12- T4 -7
W22B Panelboard, Replacement Breaker	V12- T4 -7
W22P Panelboard	V12- T4 -7
W22P Panelboard, Replacement Breaker	V12- T4 -7
Warranty Service, Power Equipment Services	V12- T22 -2
WCA Panelboard	V12- T4 -7
WCA Panelboard, Replacement Breaker	V12- T4 -7
WCG3, 5, 7, 9, 11	V12- T6 -2
WCK	V12- T13 -51
WCOIL	V12- T13 -51
WEB Panelboard	V12- T4 -2, V12- T4 -7
WEB Panelboard, Replacement Breaker	V12- T4 -2, V12- T4 -7
WEHB Panelboard	V12- T4 -7
WEHB Panelboard, Replacement Breaker	V12- T4 -7
Westinghouse 50/55, 100/110, 300, 400, 500, 700, 900, 1100, 1200/1250, 1500/1700, 2000	V12- T12 -3
Westinghouse AR-Series Replacement Breakers	V12- T17 -11, V12- T22 -6
Westinghouse Breaker Type DA-50-1600	V12- T17 -30
Type DA-50-800	V12- T17 -30
Type DA-75	V12- T17 -30
Type DB-100	V12- T17 -32
Type DB-25	V12- T17 -32
Type DB-50	V12- T17 -32
Type DB-75	V12- T17 -32
Type DBL-25	V12- T17 -32
Type DBL-50	V12- T17 -32
Type DK-15	V12- T17 -30
Type DK-25	V12- T17 -30
Type DS and DSL-206	V12- T17 -34
Type DS and DSL-416	V12- T17 -34
Type DS-420	V12- T17 -34
Type DS-632	V12- T17 -34
Type DS-840	V12- T17 -34
Type SPB-100	V12- T17 -36
Type SPB-150	V12- T17 -36
Type SPB-50	V12- T17 -36
Type SPB-65	V12- T17 -36
Westinghouse DA and DK Breakers with Digitrip RMS Retrofit Kits	V12- T17 -30
Westinghouse DB Breakers with Digitrip RMS Retrofit Kits	V12- T17 -32
Westinghouse DS Breakers with Digitrip RMS Retrofit Kits	V12- T17 -34

Appendix 2—Alphabetical Product Index

9556 Contactors and Starters	V12- T13 -5
9560 Contactors and Starters	V12- T13 -5, V12- T13 -53
9584 Contactors and Starters	V12- T13 -53
9586 Contactors and Starters	V12- T13 -5, V12- T13 -53
9589 Contactors and Starters	V12- T13 -5
9591 Contactors and Starters	V12- T13 -5
9658 Contactors and Starters	V12- T13 -5
9736 Contactors and Starters	V12- T13 -5
9739 Contactors and Starters	V12- T13 -5
9800 Motor Control Centers	V12- T14 -6
Add-on Structures	V12- T14 -6
Feeder Breaker Units	V12- T14 -6
Handle Mechanism	V12- T14 -4
Replacement Starter Units	V12- T14 -6
