## THREADING DIMENSIONS & TIGHTENING VALUES FOR SKINTOP® CABLE GLANDS

SKINTOP® Liquid Tight, Non-Metalic Strain Relief Cable Glands

**Cap nut** with ergonomically designed gripping grooves. The gripping surfaces are generously dimensioned for spanners. Integral locking feature for vibration-resistant assembly.

**Neoprene sealing** for a hermetic seal (IP68)\*. Every SKINTOP® version is available with reducing seal insert for smaller cable diameters.

**Lamellar design** for optimum strain relief and protection of the cable. Widely variable clamping range, therefore only a few gland sizes are necessary.

**Integral sealing ridges** for a water tight junction with the housing.

**Multiple trapezoidal thread** for secure and instant assembly.

Shown here are the carefully matched components of the SKINTOP® screw-type cable glands. It is precisely these parts which guarantee optimum reliability.

### Even more:

With SKINTOP® you can install the cable in an instant. Just feed it in, turn nut until tight - ready. Your cable is centered, hermetically sealed and completely strain relieved with a turn of the hand. If you do not wish to use your hands, you can work with a spanner wrench or SKINMATIC® RZ tool. Either way, with SKINTOP® you can achieve maximum reliability. SKINTOP® quality is continuously monitored to ensure a level of reliability that has resulted in many international approvals.

UL # E146370      Metric: VDE # 57986  
CSA # LR50370-10      SEV # 100989

#### TECHNICAL DATA:

Protection: Up to 70 PSI

Material: Polyamide — flame retardant,  
self-extinguishing nylon with CR bushing

Rated Temperature: PG & NPT: -20°C to +80°C, short term to +100°C  
Metric: -20°C to +100°C

Seal: IP 68 (International Protection —  
highest grade), comparable to NEMA 6  
classification  
First digit (0–6): Dust Protection  
Second digit (0–8): Water Protection

Resistant to: Salt water, weak acids, weak alkalis,  
alcohol, ester, ketones, ether, benzene, gas,  
mineral oil, animal and vegetable oils,  
gasoline, oil, grease and common solvents.

SKINTOP® meets the most stringent demands of  
safety and operational reliability. SKINTOP® can be used in panels,  
switches, control boxes, submersible pumps,  
appliances and many machine tool applications.

SKINTOP® is both a strain relief and a liquid tight seal — all in  
one connector.

#### Optimum Seal:

Complete liquid tightness is achieved with a uniquely designed  
molded sealing ring and flange nut combined with a neoprene  
bushing and domed sealing cap.

#### Unique Design:

SKINTOP® outperforms traditional connectors because the design  
consists of three parts which do not require dismantling before  
use.

The internal ratchet mechanism allows the cap to be tightened  
without twisting the cord as it compresses, pushing the collet  
fingers together to form a liquid-tight seal with the neoprene  
compression bushing.

#### Vibration Proof Protection:

An integrated locking mechanism that includes an internal ratchet  
inside the sealing portion of the cord grip provides a self locking  
and vibration proof element that prevents the cap from loosening  
even when subjected to severe vibration.

#### Quick Installation:

The multi-trapezoidal thread requires just one twist to tighten the  
dome cap — automatically adjusting to the size of the cable and  
providing optimum strain relief and liquid tight seal.

#### Durability:

SKINTOP® incorporates a heavy duty design that provides greater  
pullout strength and very reliable strain relief.

#### Easier Handling:

Larger ergonomic design and ridges in the dome cap provide  
easy gripping and mounting by hand or wrench.

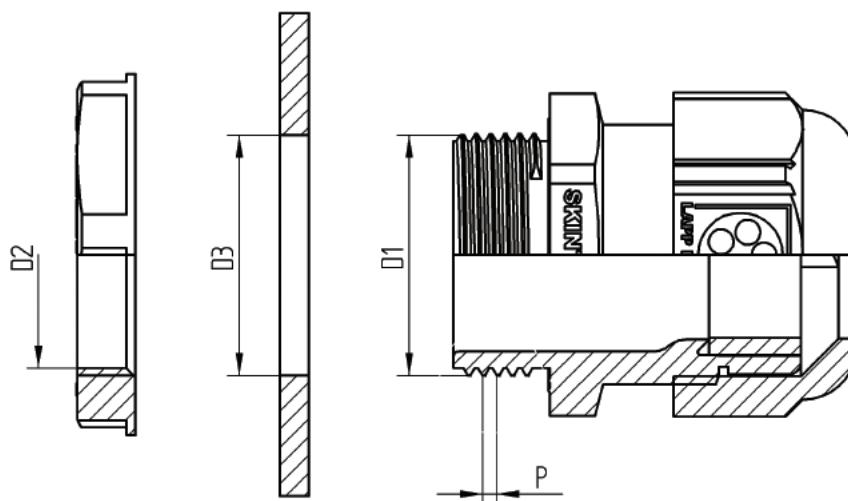

#### Larger Variable Clamping Range:

The uniquely designed collet, combined with the optional reducing  
bushing accommodates a broad range of cords, and cable  
diameters resulting in a reduction in the number of connectors  
required in inventory.

#### Resistant to Impact at Low Temperatures:

The SKINTOP® can withstand impact at low temperatures of  
-20°C.

## SO63 Series—BiAlloy Temperature Indication System

**Construction:** Heat-shrinkable thermoplastic sleeve contains a precisely engineered, fluxed solder band that is visible through the sleeve;

**Insulation:** The band provides exactly the amount of solder and flux required to terminate the ground lead to the cable shield,

**Jacket:** Encircling the band is a small temperature indicator ring.

### Features:

This ring melts only when the surfaces to be joined have reached the correct soldering temperatures, thus ensuring a properly soldered connection. Process control is built into each sleeve.

### Applications:

Used for shield-to-ground termination.

### Additional Information:

The SO63 series is immersion resistant, features the Raychem BiAlloy temperature indication system, and meets the performance requirements of SAE-AS83519 (formerly MIL-S-83519),

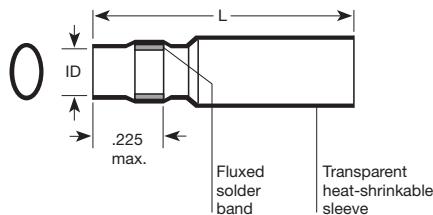

### Technical Data:

- Approvals:**  
NAS 1747
