5 Port Solenoid Valve

Series VQ1000/2000

Metal Seal | Rubber Seal

CE [Option]

RoHS

Power saving

Standard: 0.4 W
(Reduced by **60%** compared to existing model)

High-pressure (1 MPa, Metal seal): **0.95 W**

Space-saving profile

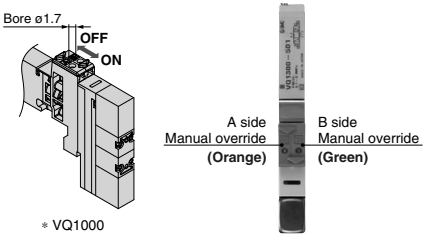
All pilot valves are compactly mounted on one side. The space-saving design of mounting all fittings on one side permits mounting in three directions.

The non-bias, one-clamp structure permits easy valve replacement.

Built-in One-touch fittings for easy piping

Slide locking type manual override provided

ON/OFF operation and locking can be made by sliding the manual override.



∗ VQ1000

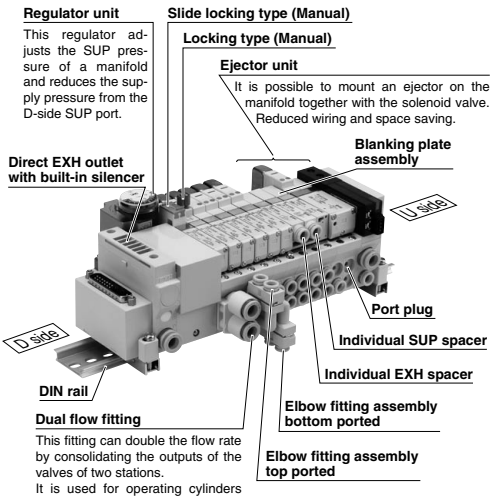
Thin compact design with high flow capacity

Model	Manifold pitch (mm)	Flow-rate characteristics		Applicable cylinder bore size
		Metal seal	Rubber seal	
		C [dm³/(s·bar)]	C [dm³/(s·bar)]	
VQ1000	10.5	0.72	1.0	Up to ø50
VQ2000	16	2.6	3.2	Up to ø80

∗ Flow-rate characteristics: 4/2 → 5/3 (A/B → R1/R2)

A wide variety of optinal parts

∗ The photo does not show an actual use example.



Valve Specifications

			Sonic conductance C [dm³/(s·bar)] 4/2 → 5/3 (A/B → R1/R2)		Type of actuation					Voltage			Electrical entry				Manual override			
			Double Single	3-position (Closed center)	Single	Double	Closed center	Exhaust center	Pressure center	12 VDC 24 VDC	100 VAC 110 VAC (50/60 Hz)	200 VAC 220 VAC (50/60 Hz)	Plug-in	Grommet	L-type plug connector	M-type plug connector	Non-locking push type (Tool required)	Locking type (Tool required)	Locking type (Manual)	Slide locking type (Manual)

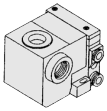
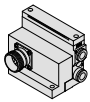
T kit (Terminal block box)



L kit (Lead wire)

S kit (Serial transmission)

M kit (Circular connector)



(VQ2000 only)

Dual 3-port valves, 4 positions

Rubber seal only

- Two 3-port valves built into one body.
- The 3-port valves on the A and B sides can operate independently.
- When used as 3 port valves, only half the number of stations is required.
- Can also be used as a 4-position, 5-port type valve.

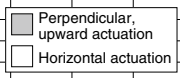
Cylinder Speed Chart

This chart is provided as guidelines only.
For performance under various conditions, use SMC's Model Selection Program before making a judgment.

Series	Average speed (mm/s)	Bore size											
		Series CJ2 Pressure 0.5 MPa Load factor 50% Stroke 60 mm			Series CM2 Pressure 0.5 MPa Load factor 50% Stroke 300 mm				Series MB, CA2 Pressure 0.5 MPa Load factor 50% Stroke 500 mm				
		ø6	ø10	ø16	ø20	ø25	ø32	ø40	ø40	ø50	ø63	ø80	ø100
VQ1101 Port size: ø6 One-touch fitting	800 700 600 500 400 300 200 100 0												
VQ2101 Port size: ø8 One-touch fitting	800 700 600 500 400 300 200 100 0												



∗ It is when the cylinder is extending that is meter-out controlled by speed controller which is directly connected with cylinder, and its needle valve with being fully open.
∗ The average velocity of the cylinder is what the stroke is divided by the total stroke time.
∗ Load factor: ((Load mass x 9.8)/Theoretical force) x 100%

Conditions

Series	Conditions	Series CJ2	Series CM2	Series MB, CA2
VQ1101	Tube bore x Length	T0604 (O.D. ø6/I.D. ø4) x 1 m		
	Speed controller	AS3002F-06		
	Silencer	AN15-C08		
VQ2101	Tube bore x Length	T0806 (O.D. ø8/I.D. ø6) x 1 m		
	Speed controller	AS3002F-08		
	Silencer	AN20-C10

Manifold

1	Plug-in unit

Stations

01	1 station
⋮	⋮

The number of max. stations differs from kit to kit.
(Refer to the below table.)

Kit type

CE-compliant

Nil	—
Q	CE-compliant

Note) For CE-compliant models, DC-type only.

Option

Symbol	Option
Nil	None
2	200/220 VAC models (F/L kit only)
B Note 2)	With back pressure check valve
D	DIN rail mounting
D0	With DIN rail bracket (Without DIN rail)
D□ Note 7)	DIN rail length specified
G1 Note 3) Note 8)	1 set of regulator unit
G2 Note 3) Note 8)	2 sets of regulator unit
G3 Note 3) Note 8)	3 sets of regulator unit
J□ Note 4)	With ejector unit
K Note 5)	Special wiring spec. (Except double wiring)
N	With name plate
R Note 6)	External pilot
S	Direct EXH outlet with built-in silencer

Note 1) When two or more symbols are specified, indicate them alphabetically. Example: -BRS
Note 2) Models with a suffix "-B" have check valves for prevention of back pressure at all manifold stations. When a back pressure check valve is desired, and is to be installed only in certain manifold stations, specify the mounting position by means of the manifold specification sheet.
Note 3) Specify the mounting position by means of the manifold specification sheet.
Note 4) Refer to page 1054 for details on with vacuum ejector unit. A combination of "J" and "N" is not available.
Note 5) Specify the wiring specifications by means of the manifold specification sheet. (Except L kit)
Note 6) Indicate "R" for the valve with external pilot.
Note 7) □: Station. Example: D08: The number of stations that may be displayed is longer than the manifold number of stations.
Note 8) G1, G2, or G3 cannot be combined with N.

Cylinder port

Symbol	Port size
C3	With ø3.2 One-touch fitting
C4	With ø4 One-touch fitting
C6	With ø6 One-touch fitting
M5	M5 thread
CM Note 1)	Mixed sizes and with port plug
L3	Top ported elbow with ø3.2 One-touch fitting
L4	Top ported elbow with ø4 One-touch fitting
L6	Top ported elbow with ø6 One-touch fitting

Symbol	Port size
L5	Top ported elbow M5 thread
B3	Bottom ported elbow with ø3.2 One-touch fitting
B4	Bottom ported elbow with ø4 One-touch fitting
B6	Bottom ported elbow with ø6 One-touch fitting
B5	Bottom ported elbow M5 thread
LM Note 1)	Elbow port, mixed sizes(Including upward, downward piping and mixed)
MM Note 2)	Mixed size for different types of piping, option installed

Note 1) Indicate "Mixed sizes and with port plug" by means of the manifold specification sheet.
Note 2) When selecting the mixed size for different types of piping or dual flow fitting assembly, enter "MM" and give instructions in the manifold specification sheet.
Note 3) Inch-size One-touch fittings are also available. Refer to page 1042 for details.
Note 4) M5 fittings for M5 thread are attached without being incorporated.

Simple specials are available with SMC Simple Specials System.
Refer to the SMC website for details on applicable models.

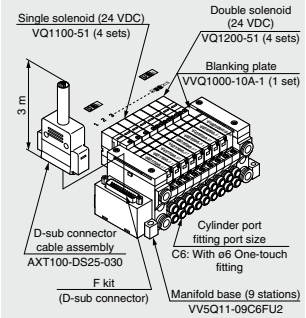
Use the standard (DC) specification when continuously energizing for long periods of time.

How to Order Manifold Assembly

Example



VV5Q11-09C6FU2 ··· **1 set** (F kit 9-station manifold base part no.)
※**VQ1100-51** ··· **4 sets (Single solenoid part no.)**
※**VQ1200-51** ··· **4 sets (Double solenoid part no.)**
※**VVQ1000-10A-1** ··· **1 set (Blanking plate part no.)**
→ The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

Specify the part numbers for valves and options together beneath the manifold base part number. Besides, when the arrangement will be complicated, specify them by means of the manifold specification sheet.

T kit (Terminal block box)

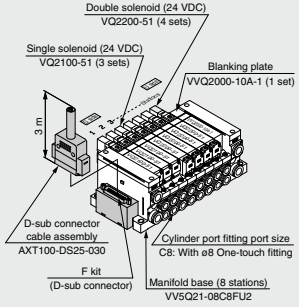
Note 5) Dual 3-port valve is not applicable.

Example



VV5Q21-08C8FU2 **1 set** (F kit 8-station manifold base part no.)
∗**VQ2100-51** ····· **3 sets (Single solenoid part no.)**
∗**VQ2200-51** ····· **4 sets (Double solenoid part no.)**
∗**VVQ2000-10A-1** ···· **1 set (Blanking plate part no.)**
→ The asterisk denotes the symbol for assembly. Prefix it to the part nos. of the solenoid valve, etc.

Specify the part numbers for valves and options together beneath the manifold base part number. Besides, when the arrangement will be complicated, specify them by means of the manifold specification sheet.

⚠Caution

Use the standard (DC) specification when continuously energizing for long periods of time.

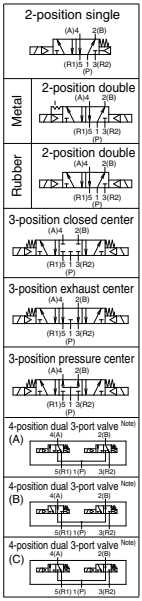
Note 1) The values are given for port size C6: (VQ1000), C8: (VQ2000) without back pressure check valve.
Note 2) As per JIS B 8375-1981 (Supply pressure 0.5 MPa; with indicator light/surge voltage suppressor; clean air
The response time is subject to the pressure and quality of the air.) The values at the time of ON are given for double types.

Symbol



Note) Rubber seal only

Standard Specifications

			Metal seal	Rubber seal
Valve specifications	**Valve type**		Metal seal	Rubber seal
	Fluid		Air, Inert gas	Air, Inert gas
	Maximum operating pressure		0.7 MPa (High-pressure type: 1.0 MPa)	0.7 MPa
	Minimum operating pressure	**Single**	0.1 MPa	0.15 MPa
		Double	0.1 MPa	0.1 MPa
		3-position	0.1 MPa	0.2 MPa
		4-position	———	0.15 MPa
	Ambient and fluid temperature		–10 to 50°C Note 1)	
	Lubrication		Not required	
	Manual override		Push type, Locking type (Tool required, Manual) semi-standard	
	Impact/Vibration resistance Note 2)		150/30 m/s²	
	Enclosure		Dust-protected; Dust-tight, Water-jet-proof (IP65) Note 4)	
Electrical specifications	**Coil rated voltage**		12 , 24 VDC, 100, 110, 200, 220 VAC (50/60 Hz)	
	Allowable voltage fluctuation		±10% of rated voltage	
	Coil insulation type		Equivalent to Class B	
	Power consumption (Current)	**24 VDC**	0.4 W DC (17 mA), 0.95 W DC (40 mA) Note 3)	
		12 VDC	0.4 W DC (34 mA), 0.95 W DC (80 mA) Note 3)	
		100 VAC	Inrush 0.96 VA (10 mA), Holding 0.96 VA (10 mA)	
		110 VAC	Inrush 1.0 VA (9 mA), Holding 1.0 VA (9 mA)	
		200 VAC	Inrush 1.26 VA (6 mA), Holding 1.26 VA (6 mA)	
		220 VAC	Inrush 1.38 VA (6 mA), Holding 1.38 VA (6 mA)	

Note 1) Use dry air to prevent condensation when operating at low temperatures.
Note 2) Impact resistance ····· No malfunction occurred when it is tested in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)
Vibration resistance ··· No malfunction occurred in a one-sweep test between 45 and 2000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)
Note 3) Value for high-speed response, high-voltage type (0.95 W)
Note 4) Dust-tight, water-jet-proof (IP65) is available on T/L/S/M kit of the VQ2000.

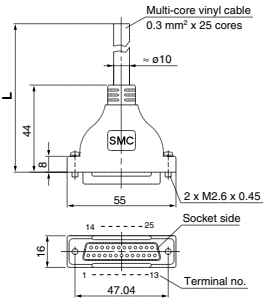
D-sub Connector (25 Pins)

Cable Assembly ●

AXT100-DS25- 015 / 030 / 050

(The D-sub connector cable assembly can be ordered individually or included in a specific manifold model no. Refer to "How to Order Manifold.")



D-sub connector cable assembly

Cable length (**L**)	Assembly part no.	Note
1.5 m	AXT100-DS25-015	Cable 25 cores x 24AWG
3 m	AXT100-DS25-030	
5 m	AXT100-DS25-050	

- For other commercial connectors, use a 25 pins type with female connector conforming to MIL-C-24308.
- Cannot be used for transfer wiring.

Connector manufacturers' example
- Fujitsu Limited
- Japan Aviation Electronics Industry, Ltd.
- J.S.T. Mfg. Co., Ltd.
- Hirose Electric Co., Ltd.

Electrical characteristics

Item	Property
Conductor resistance Ω/km, 20°C	65 or less
Voltage limit V, 1 min, AC	1000
Insulation resistance MΩ/km, 20°C	5 or more

Note) The min. bending radius of the D-sub connector cable assembly is 20 mm.

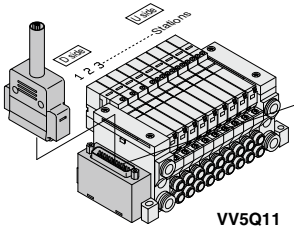
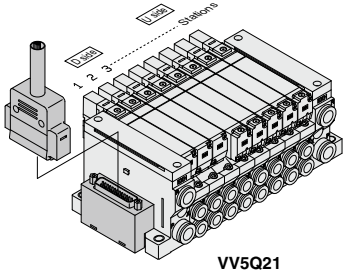
Note 1) Insert "L" (Top ported) or "B" (Bottom ported) for elbow type.
Example) B6 (Bottom ported elbow with ø6 One-touch fitting)
Note 2) Indicate "LM" (Including upward, downward piping and mixed) for models with elbow fittings and mixed cylinder port sizes.
Note 3) Indicate "Mixed sizes and with port plug" by means of the manifold specification sheet.
Note 4) When selecting the mixed size for different types of piping, dual flow fitting assembly, or double check block (direct mounting), enter "MM" and give instructions in the manifold specification sheet.
Note 5) Inch-size One-touch fittings are available. Refer to "Semi-standard" on page 1042 for details.

Note 1) When two or more symbols are specified, indicate them alphabetically. Example) -BRS
Note 2) Models with a suffix "-B" have check valves for prevention of back pressure at all manifold stations. When a back pressure check valve is desired, and is to be installed only in certain manifold stations, specify the mounting position by means of the manifold specification sheet.
Note 3) The number of stations that may be displayed is longer than the manifold number of stations.
Note 4) Specify the mounting position by means of the manifold specification sheet.
Note 5) Refer to page 1054 for the details on with ejector unit. A combination of "J" and "N" is not available.
Note 6) Specify the wiring specifications by means of the manifold specification sheet.
Note 7) Indicate "R" for the valve with external pilot.
Note 8) G1, G2, or G3 cannot be combined with N.

SMC



VV5Q11

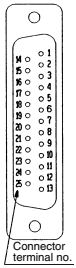


VV5Q21

The total number of stations is tabulated starting from station one on the D-side.

Electrical Wiring Specifications

D-sub connector



Connector terminal no.

As the standard electrical wiring specifications, double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station for 12 stations or less, regardless of valve and option types. Mixed single and double wiring is available as semi-standard. Refer to page 1041 for details.

How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

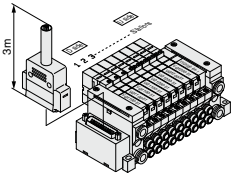
<Example>

D-sub connector kit with cable (3 m)

VV5Q11-09C6FU2 ···1 set–Manifold base part no.
*VQ1100-51 ·····2 sets–Valve part no. (Stations 1 to 2)
*VQ1200-51 ·····4 sets–Valve part no. (Stations 3 to 6)
*VQ1300-51 ·····2 sets–Valve part no. (Stations 7 to 8)
*VVQ1000-10A-1 ····1 set–Blanking plate part no. (Station 9)

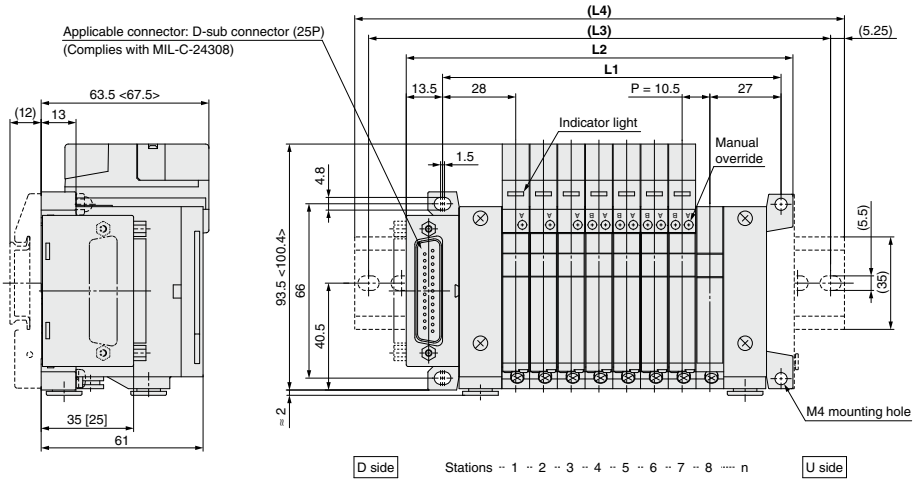
Prefix the asterisk to the part nos. of the solenoid valve, etc.

Write sequentially from the 1st station on the D-side. When part nos. written collectively are complicated, specify them by means of the manifold specification sheet.

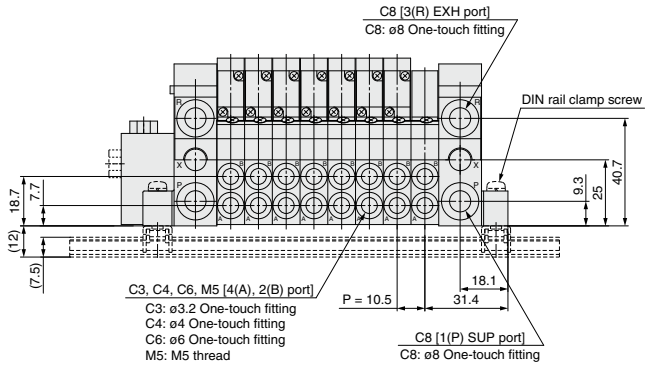


VV5Q11

< >: AC
The dashed lines indicate the DIN rail mounting [-D] and the side entry connection [-FS].



[ ]: 25 pins (top entry)



Dimensions

Formula L1 = 10.5n + 44.5, L2 = 10.5n + 62.5 n: Station (Maximum 24 stations)

L \ n	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

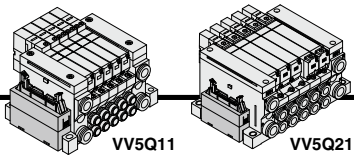
P Series VQ1000/2000
Kit (Flat ribbon cable)



- **MIL flat ribbon cable connector reduces installation labor for electrical connection.**
- **Using the connector for flat ribbon cable (26P) conforming to MIL standard permits the use of connectors put on the market and gives a wide interchangeability.**
- **Top or side receptacle position can be selected in accordance with the available mounting space.**
- **Maximum stations are 24.**

Manifold Specifications

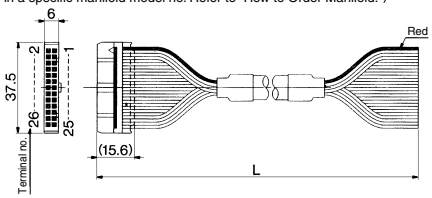
Series	Piping specifications			Applicable stations
	Piping direction	Port size		
		1(P), 3(R)	4(A), 2(B)	
VQ1000	Side	C8	C3, C4, C6, M5	Max. 24 stations
VQ2000	Side	C10	C4, C6, C8	Max. 24 stations

Flat Ribbon Cable (26 Pins)

Cable Assembly

AXT100-FC26- $\begin{matrix}1\\ \text{to}\\ 3\end{matrix}$

(Flat ribbon cable connector assembly can be ordered individually or included in a specific manifold model no. Refer to "How to Order Manifold.")



Flat Ribbon Cable Connector Assembly

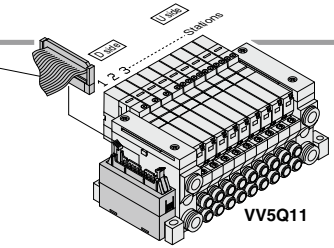
Cable length (**L**)	Assembly part no.	Note
1.5 m	AXT100-FC26-1	Cable 26 cores x 28AWG
3 m	AXT100-FC26-2	
5 m	AXT100-FC26-3	

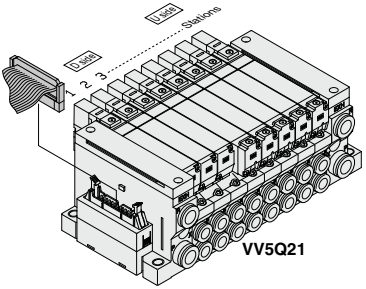
* For other commercial connectors, use a 26 pins type with strain relief conforming to MIL-C-83503.
* Cannot be used for transfer wiring.

Connector manufacturers' example

- Hirose Electric Co., Ltd.
- Fujitsu Limited
- J.S.T. Mfg. Co., Ltd.
- Sumitomo 3M Limited
- Japan Aviation Electronics Industry, Ltd.
- Oki Electric Cable Co., Ltd.

Note 1) Other than the above model, 10P, 16P, 20P are also available. Refer to page 1040 for details.
Note 2) Lengths other than the above are also available. Please contact SMC for details.





The total number of stations is tabulated starting from one on the D-side.

Note) For CE-compliant models, DC-type only. CE [Option]

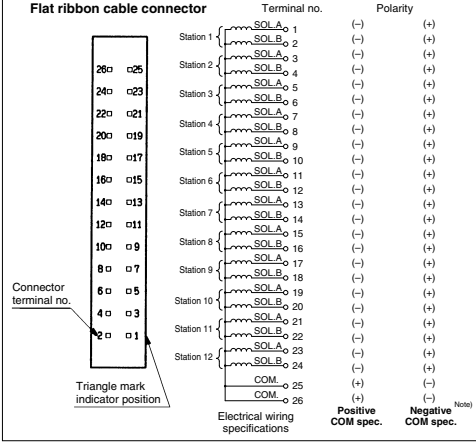
Note 1) Insert "L" (Top ported) or "B" (Bottom ported) for elbow type.
Example) B6 (Bottom ported elbow with ø6 One-touch fitting)
Note 2) Indicate "LM" (Including upward, downward piping and mixed) for models with elbow fittings and mixed cylinder port sizes.
Note 3) Indicate "Mixed sizes and with port plug" by means of the manifold specification sheet.
Note 4) When selecting the mixed size for different types of piping, dual flow fitting assembly, or double check block (direct mounting), enter "MM" and give instructions in the manifold specification sheet.
Note 5) Inch-size One-touch fittings are available. Refer to "Semi-standard" on page 1042 for details.

Note 1) When two or more symbols are specified, indicate them alphabetically. Example) -BRS
Note 2) Models with a suffix "-B" have check valves for prevention of back pressure at all manifold stations. When a back pressure check valve is desired, and is to be installed only in certain manifold stations, specify the mounting position by means of the manifold specification sheet.
Note 3) The number of stations that may be displayed is longer than the manifold number of stations.
Note 4) Specify the mounting position by means of the manifold specification sheet.
Note 5) Refer to page 1054 for details on with ejector unit. A combination of "J" and "N" is not available.
Note 6) Specify the wiring specifications by means of the manifold specification sheet.
Note 7) Indicate "R" for the valve with external pilot.
Note 8) G1, G2, or G3 cannot be combined with N.

SMC

● Electrical Wiring Specifications

Flat ribbon cable connector



As the standard electrical wiring specifications, double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station for 12 stations or less, regardless of valve and option types.
Mixed single and double wiring is available as semi-standard. Refer to page 1041 for details.

Note) When using the negative common specifications, use valves for negative common. (Refer to page 1041)
Refer to "Semi-standard" on page 1041 for details.

How to Order Valves

Note) For CE-compliant models, DC-type only. CE [Option]

Note 4) When two or more symbols are specified, indicate them alphabetically. Combination of [B] and [K] is not possible.
Note 5) Dual 3-port valve is not applicable.

⚠Caution

Use the standard (DC) specification when continuously energizing for long periods of time.

How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

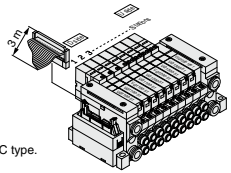
<Example>

Flat ribbon cable kit with cable (3 m)

VV5Q11-09C6PU2 ···1 set–Manifold base part no.
***VQ1100-51 ·····2 sets–Valve part no. (Stations 1 to 2)**
***VQ1200-51 ·····4 sets–Valve part no. (Stations 3 to 6)**
***VQ1300-51 ·····2 sets–Valve part no. (Stations 7 to 8)**
***VVQ1000-10A-1 ····1 set–Blanking plate part no. (Station 9)**

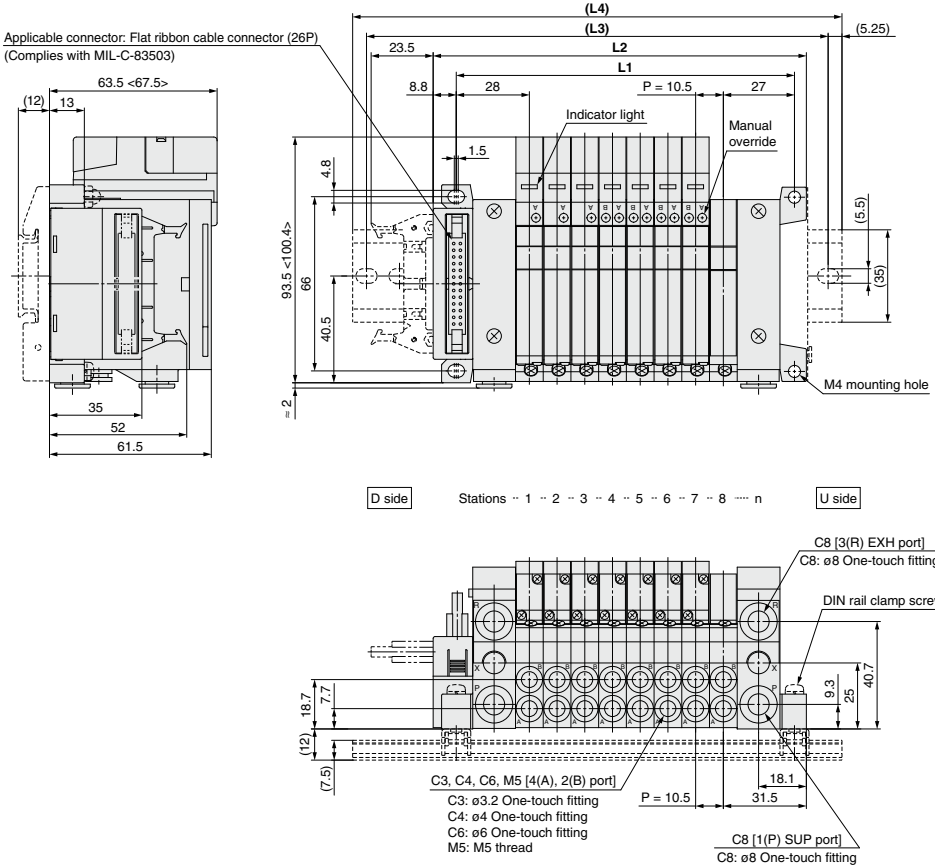
Prefix the asterisk to the part nos. of the solenoid valve, etc.

Write sequentially from the 1st station on the D-side.
When part nos. written collectively are complicated, specify them by means of the manifold specification sheet.



VV5Q11

< >: AC
The dashed lines indicate the DIN rail mounting [-D] and the side entry connection [-PS].



Dimensions

Formula L1 = 10.5n + 44.5, L2 = 10.5n + 57.5 n: Station (Maximum 24 stations)

L \ n	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Note 7) Indicate "R" for the valve with external pilot.
Note 8) G1, G2, or G3 cannot be combined with N.

SMC

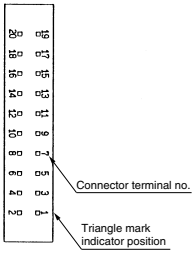
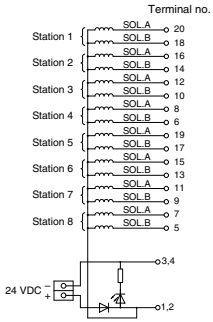
● Connector Assembly

Electric circuit diagram (Below wiring is the case of all double solenoid connections.)

Flat ribbon cable connector





As the standard electrical wiring specifications, double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station for 8 stations or less, regardless of valve and option types. Mixed single and double wiring is available as semi-standard. Refer to page 1041 for details.

Note 4) Dual 3-port valve is not applicable.

How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

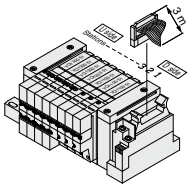
<Example>

Flat ribbon cable kit with terminal block with cable (3 m)

VV5Q11-08C6G2 ···1 set–Manifold base part no.
***VQ1100-51 ·····4 sets–Valve part no. (Stations 1 to 4)**
***VQ1200-51 ·····1 set–Valve part no. (Station 5)**
***VQ1300-51 ·····3 sets–Valve part no. (Stations 6 to 8)**

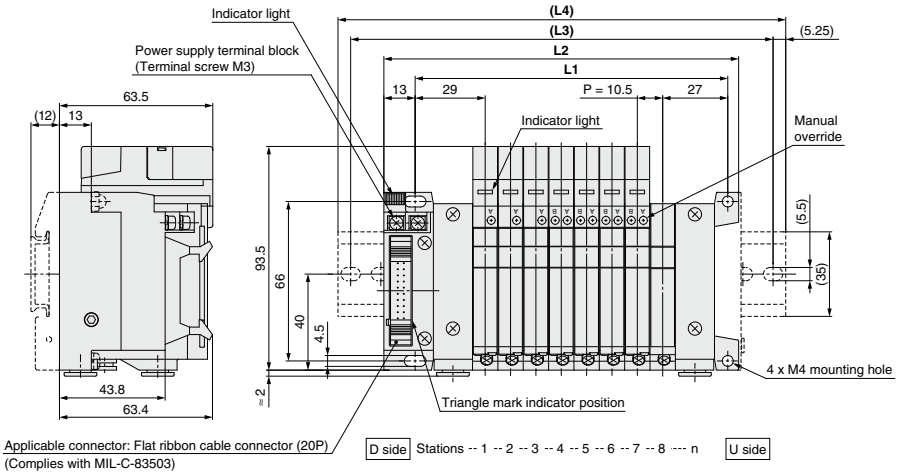
Prefix the asterisk to the part nos. of the solenoid valve, etc.

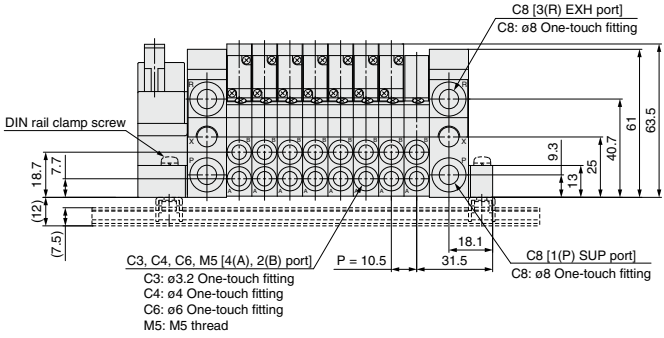
Write sequentially from the 1st station on the D-side. When part nos. written collectively are complicated, specify them by means of the manifold specification sheet.



VV5Q11

The dashed lines and dimensions in parentheses indicate DIN rail mounting [-D].





Dimensions

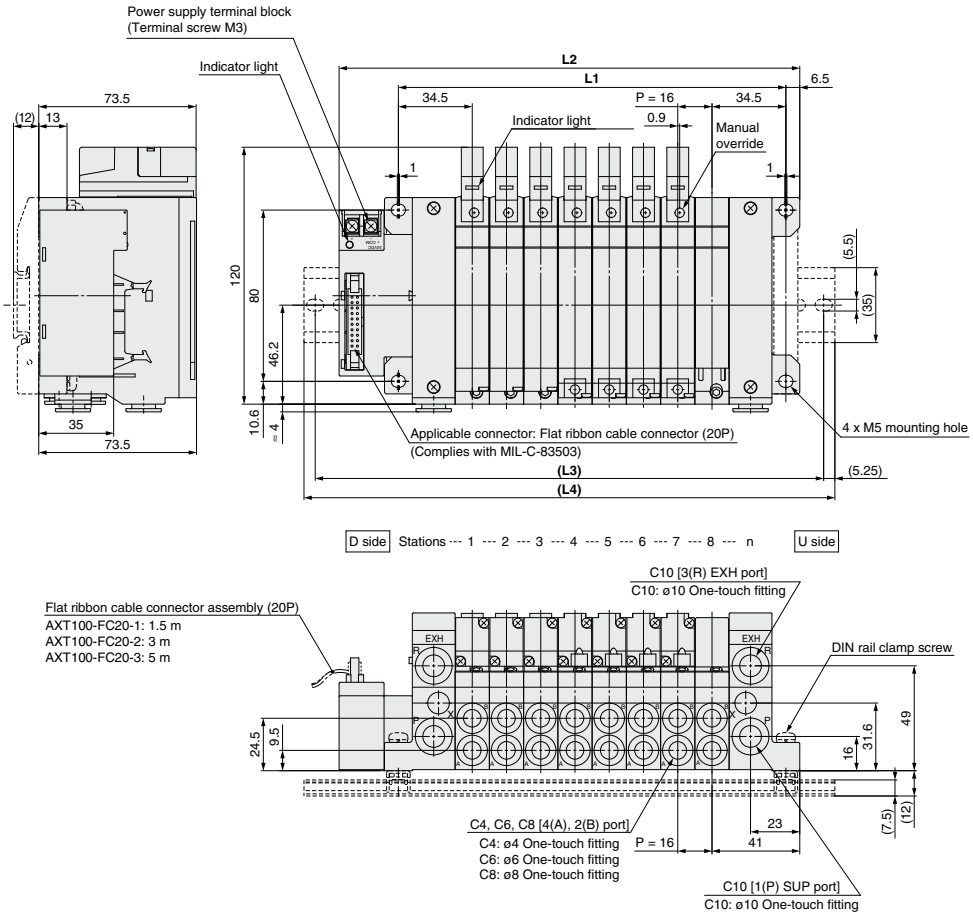
Formula L1 = 10.5n + 45.5, L2 = 10.5n + 63 n: Station (Maximum 16 stations)

L \ n	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
L1	66.5	77	87.5	98	108.5	119	129.5	140	150.5	161	171.5	182	192.5	203	213.5
L2	84	94.5	105	115.5	126	136.5	147	157.5	168	178.5	189	199.5	210	220.5	231
(L3)	112.5	125	125	137.5	150	162.5	175	187.5	187.5	200	212.5	225	237.5	250	262.5
(L4)	123	135.5	135.5	148	160.5	173	185.5	198	198	210.5	223	235.5	248	260.5	273

With ejector unit: Formula L1 = 10.5n + 29.7 + (Number of ejector units x 26.7)
L2 = 10.5n + 46.8 + (Number of ejector units x 26.7)
L4 is L2 plus about 30.

VV5Q21

The dashed lines indicate DIN rail mounting [-D] (with DIN rail mounting bracket).



Dimensions

Formula L1 = 16n + 53, L2 = 16n + 87 n: Station (Maximum 16 stations)

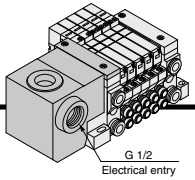
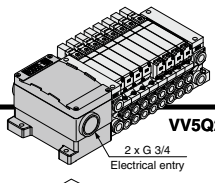
T Series VQ1000/2000
Kit (Terminal block box)



VV5Q11



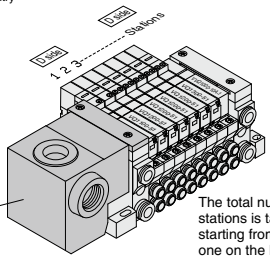
VV5Q21

IP65 compliant

- **This kit has a small terminal block inside a junction box. The electrical entry port {VQ1000: G 1/2, VQ2000: G 3/4} permits connection of conduit fittings.**
- **Maximum stations: 24 (VQ1000), 20 (VQ2000)**
- **Enclosure: Dust-tight, Water-jet-proof (IP65) compatible (Series VQ2000)**

Manifold Specifications

Series	Piping direction	Piping specifications: Port size 1(P), 3(R)	Piping specifications: Port size 4(A), 2(B)	Applicable stations
VQ1000	Side	C8	C3,C4,C6,M5	Max. 24 stations
VQ2000	Side	C10	C4,C6,C8	Max. 20 stations



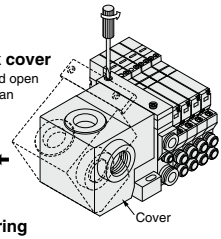
The total number of stations is tabulated starting from station one on the D-side.

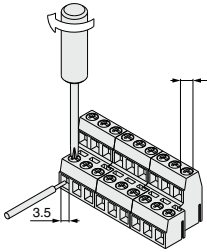
Terminal Block Connection (VQ1000)

Open the terminal block cover to connect the wires to the terminal block.

Step 1. Removing the terminal block cover

Loosen the screws on the terminal block cover and open it in the direction shown by the arrow. The cover can then be removed from the terminal block.





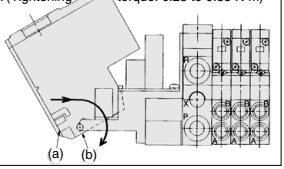
Step 2. Wiring

The diagram on the left shows the terminal block wiring schematic. All stations are provided with double solenoid wiring. Insert each lead wire into the terminal opening and tighten the screw directly above.

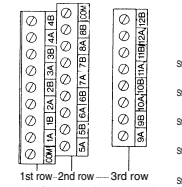
How to connect is inserting the lead wire into the terminal window, then tighten the screw on the top. (Tightening torque: 0.25 to 0.35 N·m)

Step 3. Mounting the terminal block cover

Hook groove (a) on shaft (b) and close the cover. Then tighten the screws.

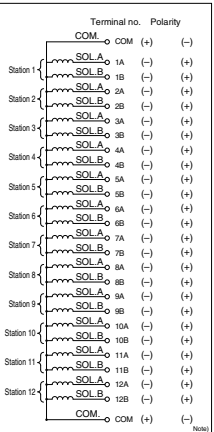


Electrical Wiring Specifications: VQ1000



The quantity of terminal blocks used depends on the number of manifold stations:

Manifold	Terminal block
2 to 8 stations	2 rows
9 to 12 stations	3 rows



As the standard electrical wiring specifications, double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station for 12 stations or less, regardless of valve and option types.

Mixed single and double wiring is available as semi-standard. Refer to page 1041 for details.

Note) When using the negative common specifications, use valves for negative common. Refer to "Semi-standard" on page 1041 for details.

How to Order Manifold

Note) For CE-compliant models, DC-type only. CE [Option]

Note 8) G1, G2, or G3 cannot be combined with N.

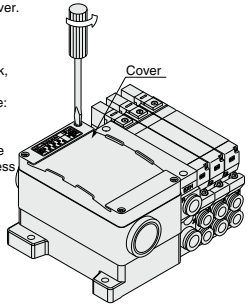
SMC

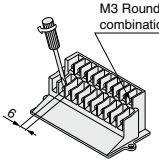
● Terminal Block Wiring (VQ2000)

Open the terminal block cover to connect the wires to the terminal block.

Step 1. Removing the terminal block cover
Loosen mounting screws (4 pcs.) on the terminal block cover and remove the cover.

Step 2. Wiring
Loosen screws on the terminal block, connect wiring and complete it by tightening screws.(Tightening torque: 0.5 to 0.7 N·m)
The diagram on the right shows the terminal block wiring. All stations are provided with double wiring regardless of the valves which are mounted.

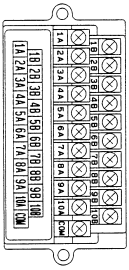


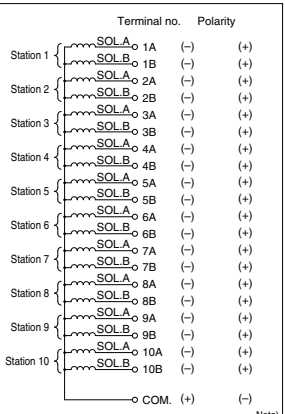


Applicable crimped terminal:
1.25-3S, 1.25Y-3,
1.25Y-3N, 1.25Y-3.5

Step 3. Mounting the terminal block cover
Securely tighten the screws after confirming that the gasket is installed correctly.
(Tightening torque: 0.7 to 1.2 N·m)

● Special Wiring Specifications: VQ2000





As the standard electrical wiring specifications, double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station for 10 stations or less, regardless of valve and option types.
Mixed single and double wiring is available as semi-standard.
Refer to page 1041 for details.

Note) When using the negative common specifications, use valves for negative common.

Refer to "Semi-standard" on page 1041 for details.

How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

<Example>
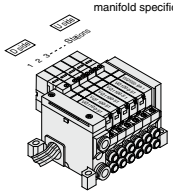
Lead wire kit with cable (3 m)
VV5Q11-06C6L2 ···1 set–Manifold base part no.
✻**VQ1100-51** ·····**2 sets–Valve part no. (Stations 1 to 2)**
✻**VQ1200-51** ·····**2 sets–Valve part no. (Stations 3 to 4)**
✻**VQ1300-51** ·····**1 set–Valve part no. (Station 5)**
✻**VVQ1000-10A-1** ··**1 set–Blanking plate part no. (Station 6)**

Prefix the asterisk to the part nos. of the solenoid valve, etc.

Write sequentially from the 1st station on the D-side. When part nos. written collectively are complicated, specify them by means of the manifold specification sheet.

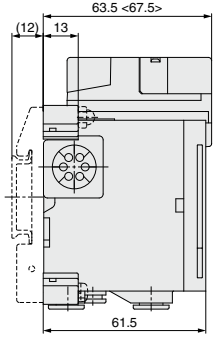


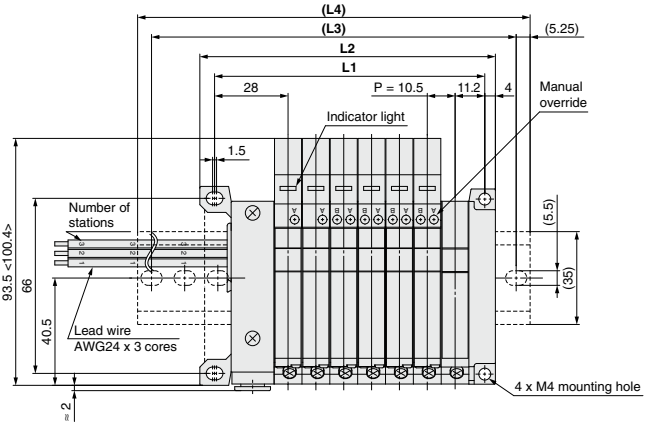
⚠Caution

Use the standard (DC) specification when continuously energizing for long periods of time.

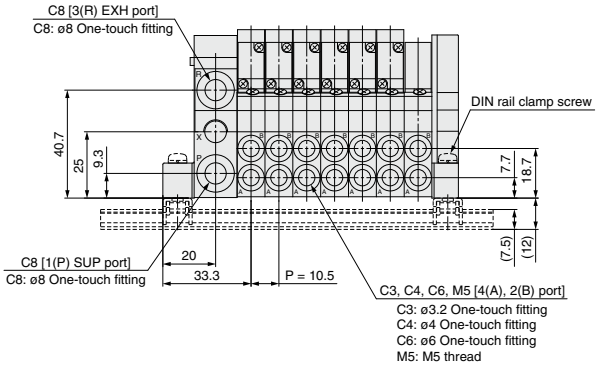
VV5Q11

< >: AC
The dashed lines indicate DIN rail mounting [-D] (with DIN rail mounting bracket).





D side Stations -- 1 -- 2 -- 3 -- 4 -- 5 -- 6 -- 7 -- n U side



Formula L1 = 10.5n + 28.5, L2 = 10.5n + 38
n: Station (Maximum 8 stations)

Dimensions

L \ n	1	2	3	4	5	6	7	8
L1	39	49.5	60	70.5	81	91.5	102	112.5
L2	48.5	59	69.5	80	90.5	101	111.5	122

How to Order Manifold Assembly

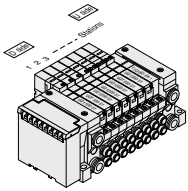
Specify the part numbers for valves and options together beneath the manifold base part number.

<Example>

VV5Q11-08C6SV ··· 1 set–Manifold base part no.
***VQ1100-51 ····· 2 sets–Valve part no. (Stations 1 to 2)**
***VQ1200-51 ····· 4 sets–Valve part no. (Stations 3 to 6)**
***VQ1300-51 ····· 1 set–Valve part no. (Station 7)**
***VVQ1000-10A-1 ·· 1 set–Blanking plate part no. (Station 8)**

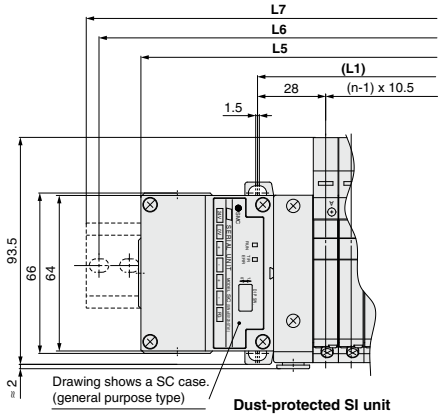
Prefix the asterisk to the part nos. of the solenoid valve, etc.

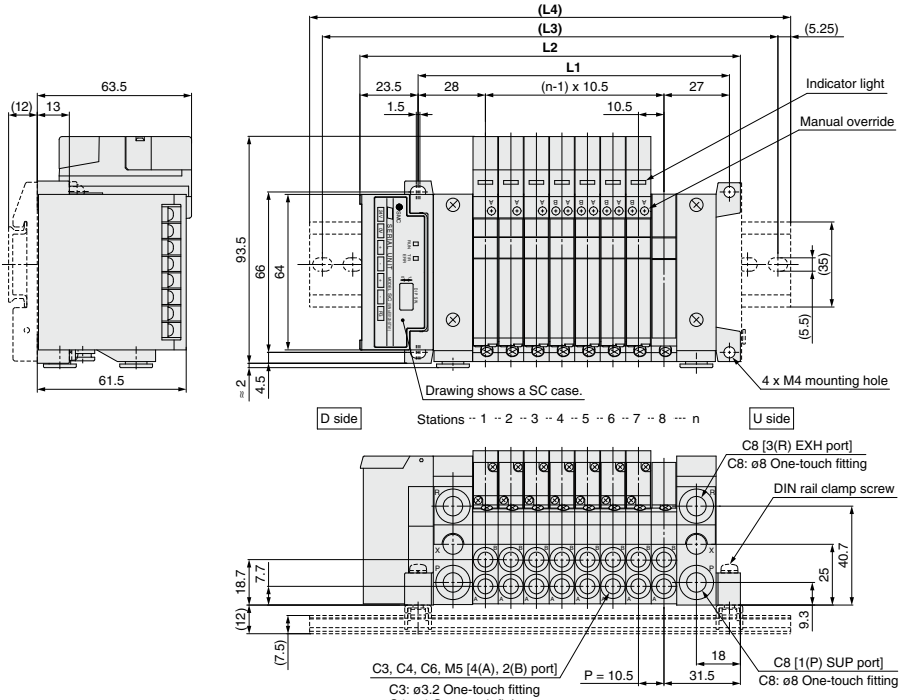
Write sequentially from the 1st station on the D-side. When part nos. written collectively are complicated, specify them by means of the manifold specification sheet.



VV5Q11

The dashed lines indicate DIN rail mounting [-D] (with DIN rail mounting bracket).





C3: ø3.2 One-touch fitting
C4: ø4 One-touch fitting
C6: ø6 One-touch fitting
M5: M5 thread

With ejector unit: Formula
L1 = 10.5n + 28.7 + (Number of ejector units x 26.7)
L2 = 10.5n + 56.3 + (Number of ejector units x 26.7)
L4 is L2 plus about 30.

Dust-protected SI unit: L5 = 10.5n + 97, L6 = L3 + 25, L7 = L4 + 25
Formula L1 = 10.5n + 44.5, L2 = 10.5n + 72.5 n: Station (Maximum 16 stations)

Connector width (**W**)	17.2	24.8	30

∗ For other commercial connectors, use a type with strain relief conforming to MIL-C-83503.

Special Wiring Specifications

In the internal wiring of F/P/J/G/T/S kit, double wiring (connected to SOL. A and SOL. B) is adopted for each station regardless of the valve and option types. Mixed single and double wiring is available as an option.

1. How to Order

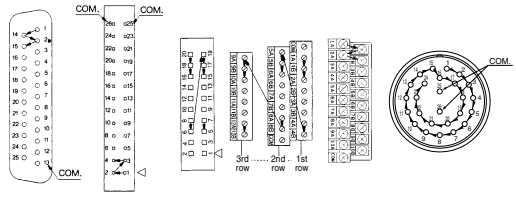
Indicate an option symbol "-K", for the manifold no. and be sure to specify the mounting position and number of stations of the single and double wiring by means of the manifold specification sheet.

Example) **VV5Q11-08C6FU1-D K S**

Others, option symbols: to be indicated alphabetically.

2. Wiring specifications

With the A side solenoid of the 1st station as no.1 (meaning, to be connected to no.1 terminal), without making any terminals vacant.



F kit D-sub connector (25P) | **P kit** Flat ribbon cable connector (26P) | **J/G kit** | **T kit** Terminal block (VQ1000, 24 terminals) | **T kit** Terminal block (VQ2000) | **M kit**

3. Max. number of stations

The maximum number of stations depends upon the number of solenoids. Assuming one for a single and two for a double, determine the number of stations so that the total number is not more than the max. number given in the following table.

Kit	F kit (D-sub connector)		P kit (Flat ribbon cable)				J kit (Flat ribbon cable)	G kit (Flat ribbon cable with terminal block)
Type	FUS□ 25P	FUSA 15P	PUS□ 26P	PUSC 20P	PUSB 16P	PUSA 10P	JUS□ 20P	G□

DIN Rail Mounting

Each manifold can be mounted on a DIN rail. Order it by indicating a DIN rail mounting option symbol, "-D". In this case, a DIN rail which is approx. 30 mm longer than the manifold with the specified number of stations is attached.

● **When DIN rail is unnecessary**
(DIN rail mounting brackets only are attached.)
Indicate the option symbol, -D0, for the manifold part number.

Example)

VV5Q11−08C6FU1−D0S

Others, option symbols: to be indicated alphabetically.

●**When using DIN rail longer than the manifold with specified number of stations**
Clearly indicate the necessary number of stations next to the option symbol "-D" for the manifold part number.

Example)

VV5Q11−08C6FU1−D09S

DIN rail for 9 stations

Others, option symbols: to be indicated alphabetically.

∗The number of stations that may be displayed is longer than the manifold number of stations.

● **When changing to a DIN rail mounting.**
Order brackets for mounting a DIN rail. (Refer to "Manifold Optional Parts" on pages 1052 and 1058.)

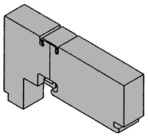
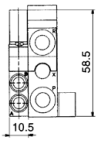
VQ1000: Manifold Optional Parts

Blanking plate assembly
VVQ1000-10A-1

Symbol

It is used by attaching on the manifold block for being prepared for removing a valve for maintenance reasons or planning to mount a spare valve, etc.

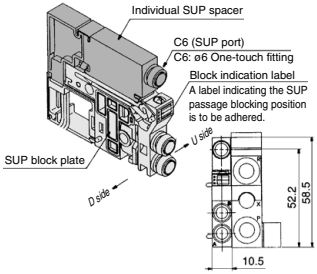


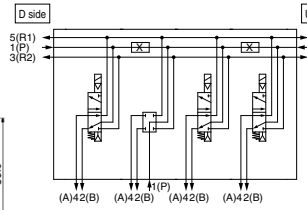


Individual SUP spacer
VVQ1000-P-1- C6 N7

When the same manifold is to be used for different pressures, individual SUP spacers are used as SUP ports for different pressures. (One station space is occupied.)
Block both sides of the station, for which the supply pressure from the individual SUP spacer is used, with SUP block plates. (Refer to the application example.)

- Specify the spacer mounting position and SUP block plate position by means of the manifold specification sheet.
  The block plate is used in one or two places for one set. (Two SUP block plates for blocking SUP station are attached to the individual SUP spacer.)
- As a standard, electric wiring is connected to the position of the manifold station where the individual SUP spacer is mounted.
- If wiring is not required for stations equipped with spacers, enter "X" in the special wiring specifications column in the manifold specification sheet.

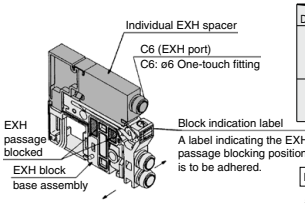




Individual EXH spacer
VVQ1000-R-1- C6 N7

When valve exhaust affects other stations due to the circuit configuration, this spacer is used for individual valve exhaust. (One station space is occupied.)
Block both sides of the individual valve EXH station. (Refer to the application example.)

- Specify the mounting position, as well as the EXH block base or EXH block plate position by means of the manifold specification sheet. The block plate is used in one or two places for one set.
- An EXH block base assembly is used in the blocking position when ordering an EXH spacer incorporated with a manifold no. However, do not order an EXH block base assembly because it is attached to the spacer.
  When separately ordering an individual EXH spacer, separately order an EXH block base assembly because it is not attached to the spacer.
- As a standard, electric wiring is connected to the position of the manifold station where the individual EXH spacer is mounted.
- If wiring is not required for stations equipped with spacers, enter "X" in the special wiring specifications column in the manifold specification sheet.
- Do not install any back pressure check valve on the manifold station, on which the spacer is to be mounted. When installing the back pressure check valve on other manifold station, be sure to specify the manifold station position on the manifold specification sheet instead of ordering by specifying the manifold option symbol "B".



Description/Model	Stations	1	2	3	4	5	6	7

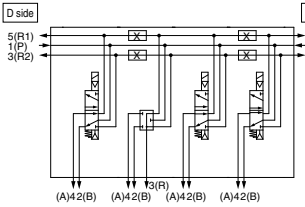
Individual EXH spacer + **EXH block base assembly** | **Valve** + **EXH block base assembly**



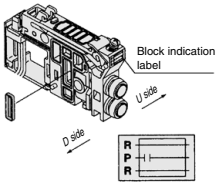
SUP block plate
VVQ1000-16A

When different pressures are supplied to a manifold, a SUP block plate is used to block the stations under different pressures.

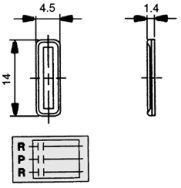
- Specify the mounting position by means of the manifold specification sheet.

<Block indication label>
Indication labels to confirm the blocking position are attached (Each for SUP passage and SUP/EXH passage blocking positions).

- When ordering a block plate incorporated with a manifold, a block indication label is attached to the manifold.



SUP passage blocked



SUP/EXH passage blocked

Blanking plate with connector

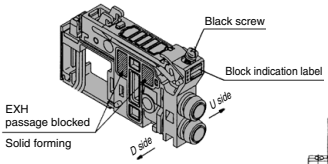
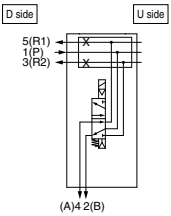
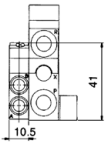
P3	For P, G, T, S kit (2 to 24 stations)/Single wiring
L0✻	L0 kit
L1✻	L1 kit ✻ 1 to 8 stations
L2✻	L2 kit

The manifold block assembly is used between stations for which exhaust is desired to be divided when valve exhaust affects other stations due to the circuit configuration. The EXH passage on the D-side is blocked in the EXH block base assembly. It is also used in combination with an individual EXH spacer for individual exhaust.

<Block indication label>
Indication labels to confirm the blocking position are attached. (Each for EXH passage and SUP/EXH passage blocking positions)
✻ When ordering a EXH block base incorporated with a manifold, a block indication label is attached to the manifold.







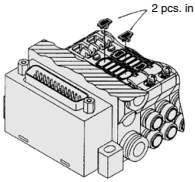
✻ Specify the mounting station by means of the manifold specification sheet.
✻ When ordering this option incorporated with a manifold, specify the EXH block base assembly part number with "✻" in front of it beneath the manifold part number.

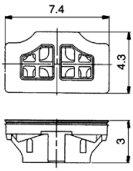
EXH passage blocked

SUP/EXH passage blocked

Back pressure check valve assembly [-B]
VVQ1000-18A

It prevents cylinder malfunction caused by other valve exhaust entry. Insert it into R (EXH) port on the manifold side of a valve which is affected. It is effective when a single-acting cylinder is used or an exhaust center type solenoid valve is used.
✻ When ordering it being mounted on all manifold stations, suffix "-B" to the end of the manifold part number.
Note) When a back pressure check valve is desired, and is to be installed only in certain manifold stations, clearly indicate the part number and specify the mounting station by means of the manifold specification sheet.



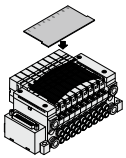


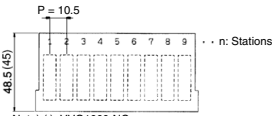
(Precautions)
1. The back pressure check valve assembly is the parts with a check valve structure. However, since the valve has slight air leakage, take precautions for the exhaust air not to be restricted at the exhaust port.
2. When a back pressure check valve is mounted, the effective area of the valve will decrease by about 20%.

Name plate [-N]
VVQ1000-N/NC-N-Station (1 to Max. stations)

N: Standard
NC: For mounting blanking plate with connector

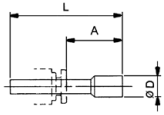
It is a transparent resin plate for placing a label that indicates solenoid valve function, etc.
Insert it into the groove on the side of the end plate and bend it as shown in the figure.
✻ When the blanking plate with connector is mounted, it automatically will be "VVQ1000-NC-n"
✻ When ordering this option incorporated with a manifold, suffix "-N" to the end of the manifold part number.





Blanking plug (For One-touch fittings)
KQ2P-□

It is inserted into an unused cylinder port and SUP/EXH ports.
Purchasing order is available in units of 10 pieces.

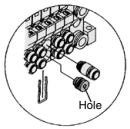


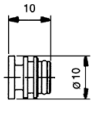
Dimensions

Applicable fitting size ød	Model	A	L	D	Applicable fitting size ød	Model	A	L	D
3.2	**KQ2P-23**	16	31.5	3.2	1/8"	**KQ2P-01**	16	31.5	5
4	**KQ2P-04**	16	32	6	5/32"	**KQ2P-03**	16	32	6
6	**KQ2P-06**	18	35	8	1/4"	**KQ2P-07**	18	35	8.5
8	**KQ2P-08**	20.5	39	10	5/16"	**KQ2P-09**	20.5	39	10

Port plug
VVQ0000-58A

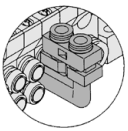
The plug is used to block the cylinder port.
✻ When ordering this option incorporated with a manifold, indicate "CM" for the port size of the manifold part number, as well as, the mounting station and cylinder port mounting positions 4(A) and 2(B) by means of the manifold specification sheet.
✻ Gently screw in an M3 screw in the port plug hole and pull it for removal.

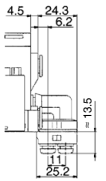




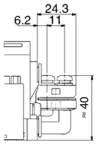
Elbow fitting assembly
VVQ1000-F-L(C3/C4/C6/M5/N1/N3/N7)

It is used for piping that extends upward or downward from the manifold.
✻ When ordering this option incorporated with a manifold, indicate "L□" or "B□" for the manifold port size (when installed in all stations.)
When installing it in part of the manifold stations, specify the elbow fitting assembly part number and the mounting station by means of the manifold specification sheet.
✻ When mounting elbow fitting assembly on the edge of manifold station and a silencer on EXH port, select a silencer, AN203-KM8. A silencer (AN200-KM8) is interfered with fittings.





Downward



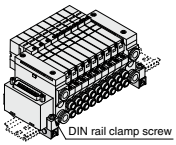
Upward

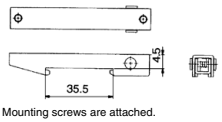
VQ1000: Manifold Optional Parts

DIN rail mounting bracket [-D/-D0/-D□]
VVQ1000-57A

It is used for mounting a manifold on a DIN rail.
* When ordering this option incorporated with a manifold, suffix "D" to the end of the manifold part number.

1 set of DIN rail mounting bracket is used for 1 manifold (2 DIN rail mounting brackets).





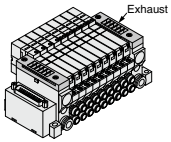
Mounting screws are attached.

Direct EXH outlet with built-in silencer [-S]

This is a type with an exhaust port a top the manifold end plate. The built-in silencer exhibits an excellent noise suppression effect. (Noise reduction: 30 dB)
* When ordering this option incorporated with a manifold, suffix "S" to the end of the manifold part number.

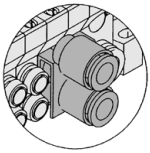
Note) A large quantity of drainage generated in the air source results in exhaust of air together with drainage.

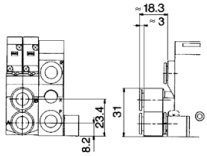
● Refer to page 1063 for maintenance.



Dual flow fitting assembly
VVQ1000-52A- $\begin{matrix}C8\\N9\end{matrix}$

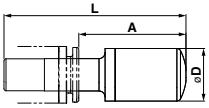
This is a fitting to multiply the flow rate by combining the outputs of 2 valve stations. It is used for driving a large bore cylinder. This is a One-touch fitting for a port size of ø8 or ø5/16".
* The port size for the manifold part number is "MM". Clearly indicate the dual flow fitting assembly part number and specify the mounting station by means of the manifold specifications.
* In dual flow fitting assembly, a special clip which is combined in one-piece of 2 stations is attached as a holding clip.





Silencer (For EXH port)

This silencer is to be inserted into the EXH port (One-touch fittings) of the common exhaust type.
* When mounting elbow fitting assembly (VVQ1000-F-L□) on the edge of manifold station, select a silencer, AN15-C08.



Dimensions

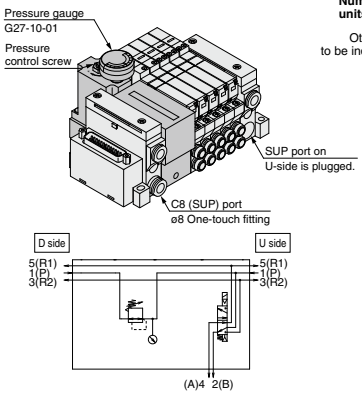
Series	Applicable fitting size ød	Model	A	L	D	Effective area (mm²)	Noise reduction (dB)
VQ1000	8	AN15-C08	26.5	45	13	20	30

Regulator unit
VVQ1000-AR-1

The regulator controls the SUP pressure in a manifold. Supply air from D-side SUP port is regulated. SUP port on U-side is plugged.
When a regulator unit is mounted, the SUP port on the U-side of the manifold will be plugged. A maximum of 3 units can be mounted on a manifold.

Specifications

Maximum operating pressure (MPa)	0.8
Set pressure range (MPa)	0.05 to 0.7
Ambient and fluid temp. (°C)	5 to 50
Fluid	Air
Cracking pressure valve (MPa)	0.02
Structure	Relieving type



• How to Order

Indicate an option symbol "-G*" for the manifold no. and be sure to specify the mounting position and number of stations by means of the manifold specification sheet. One unit is counted as one station and occupies a space for three stations, therefore, pay attention to the manifold size. The regulator valve unit, to which no wire is connected, valves can be mounted up to the standard max. number of stations of each kit.

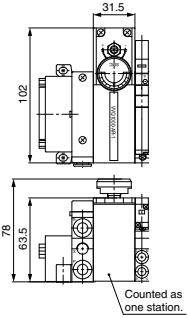
How to Order Manifold
VV5Q11-14C6FUO-D G 2

Number of manifold stations
Number of mounted valves ··· 12 sets
+
Number of regulator units ··· 2 sets

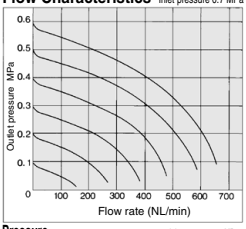
Number of regulator units ··· 2 sets

With regulator unit

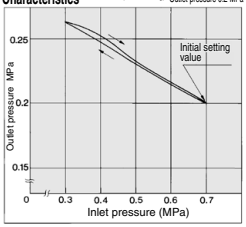
Others, option symbols: to be indicated alphabetically.



Flow Characteristics
Conditions: Inlet pressure 0.7 MPa



Pressure Characteristics
Conditions (Initial setting) Inlet pressure 0.7 MPa Outlet pressure 0.2 MPa



⚠ Caution

• Pressure setting

Check the inlet pressure and then turn the pressure control screw to set the outlet pressure. Turning the screw clockwise will increase the outlet pressure while turning it counterclockwise decrease the pressure. (Set the pressure by turning the screw in the increase direction.)

• Installation

Since some level of the actuator's operational frequency may lead to a sharp pressure change, pay attention to the pressure gauge durability.

Double check block (Separated) for VQ1000
VQ1000-FPG-□□-□

It is used on the outlet side piping to keep the cylinder in the intermediate position for a long time. Combining the double check block with a built-in pilot type double check valve and a 3-position exhaust center solenoid valve will enable the cylinder to stop in the middle or maintain its position for long periods of time.
The combination with a 2-position single/double solenoid valve will permit this block to be used for preventing the dropping at the cylinder stroke end when the SUP residual pressure is released.

Specifications

Max. operating pressure	0.8 MPa
Min. operating pressure	0.15 MPa
Ambient and fluid temp.	–5 to 50°C
Flow characteristics: C	0.60 dm³/(s·bar)
Max. operating frequency	180 c.p.m

Note) Based on JIS B 8375-1981
(Supply pressure: 0.5 MPa)

Bracket Assembly

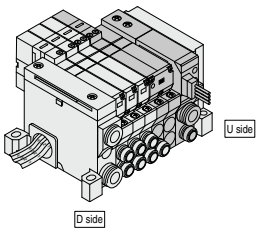
Part no.	Tightening torque
VQ1000-FPG-FB	0.22 to 0.25 N·m

⚠ Caution

- Air leakage from the pipe between the valve and cylinder or from the fittings will prevent the cylinder from stopping for long periods of time. Check the leakage using neutral household detergent, such as dish washing soap. Also check the cylinder's tube gasket, piston packing and rod packing for air leakage.
- Since One-touch fittings allow slight air leakage, screw piping (with M5 thread) is recommended when stopping the cylinder in the middle for long periods of time.
- Combining double check block with 3-position closed center or pressure center solenoid valve will not work.
- M5 fitting assembly is attached, not incorporated into the double check block. After screwing in the M5 fittings, mount the assembly on the double check block. {Tightening torque: 0.8 to 1.2 N·m}
- If the exhaust of the double check block is restricted too much, the cylinder may not operate properly and may not stop intermediately.
- Set the cylinder load so that the cylinder pressure will be within two times that of the supply pressure.

VQ1000: Manifold Option/With Ejector Unit

An ejector unit can be mounted on the manifold base for a solenoid valve. Instead of mounting the valve and ejector unit separately, this option reduces piping, wiring and creates additional space savings.



Note 1) SUP and EXH ports on the ejector unit manifold base are arranged on D-side alone. The end plate on the U-side is the same as that used in the L kit.
Note 2) Individual piping is provided for the supply and exhaust ports of the ejector unit.
Note 3) The manifold with an ejector unit is mounted from the U-side.
Note 4) One vacuum ejector unit corresponds to one station.
∗ Specify the mounting station by means of the manifold specification sheet.

Specifications

Ejector valve model	VVQ1000□-J□-□□1-A	VVQ1000□-J□-□□1-B
Nozzle diameter (mm)	0.7	1.0
Max. suction flow rate N (NL/min)	11	20
Max. vacuum pressure (mmHg)	–630	
Max. operating pressure (MPa)	0.7 (High-pressure type 0.8)	
Standard supply pressure (MPa)	0.5	
Operating temperature (°C)	5 to 50	

Maximum Number of Ejector Units

(Max. number of ejector units is subject to the number of valve stations.)

Max. number of ejector units	Max. number of mounted valves		
	F, P, T kit	S, G, J kit	L kit
1	11 (20)	7 (14)	7
2	10 (16)	6 (12)	6
3	9 (12)	5 (10)	5
4	8 (8)	4 (8)	—
5	4 (4)	3 (4)	—

Note) The max. number of mounted valves applies to double wiring. Parenthesized numbers apply to single wiring. Please contact SMC for conditions other than the above or mixed wiring.

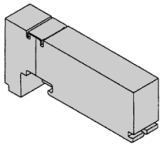
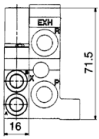
VQ2000: Manifold Optional Parts

Blanking plate assembly
VVQ2000-10A-1

Symbol

It is used by attaching on the manifold block for being prepared for removing a valve for maintenance reasons or planning to mount a spare valve, etc.

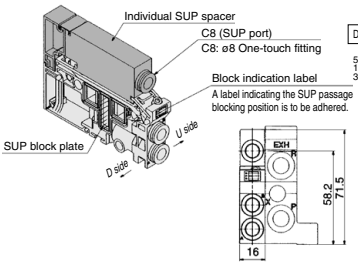




Individual SUP spacer
VVQ2000-P-1-$^{C8}_{N9}$

When the same manifold is to be used for different pressures, individual SUP spacers are used as SUP ports for different pressures. (One station space is occupied.)
Block both sides of the station, for which the supply pressure from the individual SUP spacer is used, with SUP block plates. (Refer to the application example.)

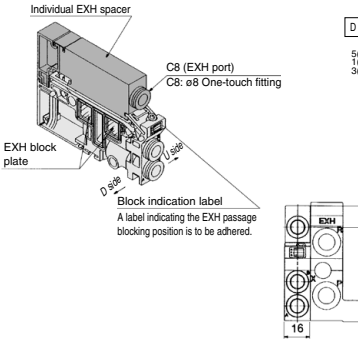
- Specify the spacer mounting position and SUP block plate position by means of the manifold specification sheet. The block plate is used in one or two places for one set. (Two SUP block plates for blocking SUP station are attached to the individual SUP spacer.)
- As a standard, electric wiring is connected to the position of the manifold station where the individual SUP spacer is mounted.
- If wiring is not required for stations equipped with spacers, enter "X" in the special wiring specifications column in the manifold specification sheet.



Individual EXH spacer
VVQ2000-R-1-$^{C8}_{N9}$

When valve exhaust affects other stations due to the circuit configuration, this spacer is used for individual valve exhaust. (One station space is occupied.)
Block both sides of the individual valve EXH station. (Refer to the application example.)

- Specify the mounting position, as well as the EXH block base or EXH block plate position by means of the manifold specification sheet.
  The block plate is used in one or two places for one set. (Two EXH block plates for blocking EXH station are attached to the individual EXH spacer.)
- As a standard, electric wiring is connected to the position of the manifold station where the individual EXH spacer is mounted.
- If wiring is not required for stations equipped with spacers, enter "X" in the special wiring specifications column in the manifold specification sheet.
- Do not install any back pressure check valve on the manifold station, on which the spacer is to be mounted. When installing the back pressure check valve on other manifold station, be sure to specify the manifold station position on the manifold specification sheet instead of ordering by specifying the manifold option symbol "B".



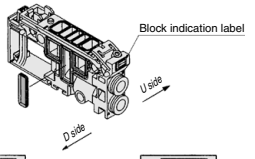
SUP block plate
VVQ2000-16A

When different pressures are supplied to a manifold, a SUP block plate is used to block the stations under different pressures.

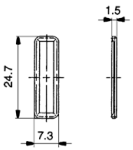
- Specify the mounting position by means of the manifold specification sheet.

<Block indication label>

Indication labels to confirm the blocking position are attached. (Each for SUP passage and SUP/EXH passage blocking positions)



SUP passage blocked **SUP/EXH passage blocked**



- When ordering a block plate incorporated with a manifold, a block indication label is attached to the manifold.

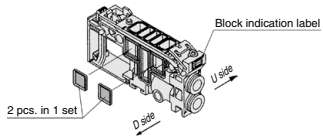
EXH block plate
VVQ2000-19A

The EXH block plate is used between stations for which exhaust is desired to be divided when valve exhaust affects other stations configuration. It is also used in combination with an individual EXH spacer for individual exhaust.

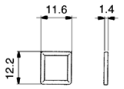
- Specify the mounting position by means of the manifold specification sheet.

<Block indication label>

Indication labels to confirm the blocking position are attached. (Each for EXH passage and SUP/EXH passage blocking positions)



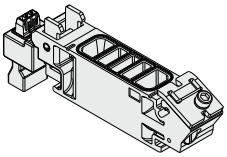
EXH passage blocked **SUP/EXH passage blocked**

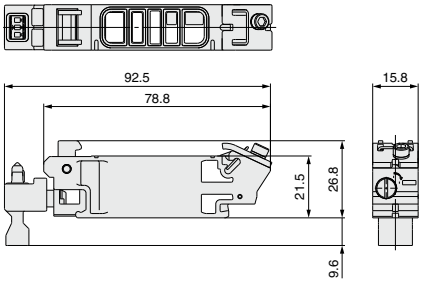


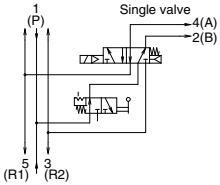
- When ordering a block plate incorporated with a manifold, a block indication label is attached to the manifold.

SUP stop valve spacer
VVQ2000-24A-1

A SUP stop valve spacer is mounted on a manifold block, making it possible to individually shut off supply air to each valve.
Enclosure: Dust-tight, Water-jet-proof (IP65) compliant







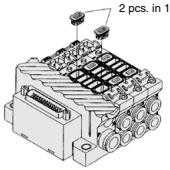
<Circuit diagram>
(Example of a spacer with a built-in single valve)

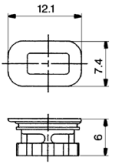
Back pressure check valve assembly [-B]
VVQ2000-18A

It prevents cylinder malfunction caused by other valve exhaust entry. Insert it into R (EXH) port on the manifold side of a valve which is affected. It is effective when a single-acting cylinder is used or an exhaust center type solenoid valve is used.

* When ordering assemblies incorporated with a manifold, add suffix "-B" to the end of the manifold part number.

Note) When a check valve for back pressure prevention is desired and is to be installed only in certain manifold stations, clearly indicate the part number and specify the mounting position by means of the manifold specification sheet.



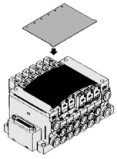


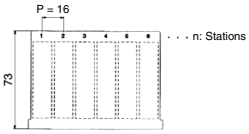
(Precautions)
1. The back pressure check valve assembly is assembly parts with a check valve structure. However, since the valve has slight air leakage, take precautions for the exhaust air not to be restricted at the exhaust port.
2. When a back pressure check valve is mounted, the effective area of the valve will decrease by about 20%.

Name plate [-N]
VVQ2000-N-Station (1 to Max. stations)

It is a transparent resin plate for placing a label that indicates solenoid valve function, etc.
Insert it into the groove on the side of the end plate and bend it as shown in the figure.

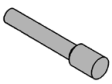
* When ordering this option incorporated with a manifold, suffix "-N" to the end of the manifold part number.

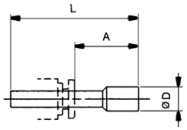




Blanking plug (For One-touch fittings)
KQ2P-□

It is inserted into an unused cylinder port and SUP/EXH ports. Purchasing order is available in units of 10 pieces.





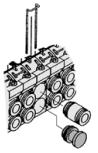
Dimensions

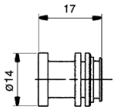
Applicable fitting size ød	Model	A	L	D	Applicable fitting size ød	Model	A	L	D
4	**KQ2P-04**	16	32	6	5/32"	**KQ2P-03**	16	32	6
6	**KQ2P-06**	18	35	8	1/4"	**KQ2P-07**	18	35	8.5
8	**KQ2P-08**	20.5	39	10	5/16"	**KQ2P-09**	20.5	39	10
10	**KQ2P-10**	22	43	12	3/8"	**KQ2P-11**	22	43	11.5

Port plug
VVQ1000-58A

The plug is used to block the cylinder port.

* When ordering a plug incorporated with a manifold, indicate "CM" for the port size of the manifold part number, as well as, the mounting position and number of stations and cylinder port mounting positions, A and B by means of the manifold specification sheet.



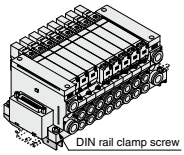


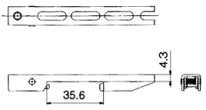
VQ2000: Manifold Optional Parts

DIN rail mounting bracket [-D/-D0/-D□]
VVQ2000-57A

It is used for mounting a manifold on a DIN rail.
* When ordering this option incorporated with a manifold, suffix "-D" to the end of the manifold part number.

1 set of DIN rail mounting bracket is used for 1 manifold (2 DIN rail mounting brackets).



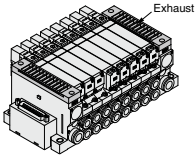


Direct EXH outlet with built-in silencer [-S]

This is a type with an exhaust port atop the manifold end plate. The built-in silencer exhibits an excellent noise suppression effect. (Noise reduction: 30 dB)
* When ordering this option incorporated with a manifold, suffix "-S" to the end of the manifold part number.

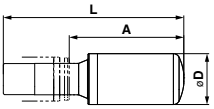
Note) A large quantity of drainage generated in the air source results in exhaust of air together with drainage.

● Refer to page 1063 for maintenance.



Silencer (For EXH port)

This silencer is to be inserted into the EXH port (One-touch fittings).

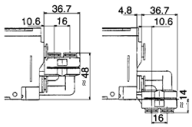


Dimensions

Series	Applicable fitting size ød	Model	A	L	D	Effective area (mm²) (Cv factor)	Noise reduction (dB)
VQ2000	10	AN20-C10	36.5	57.5	16.5	30	30

Elbow fitting assembly
VVQ2000-F-L(C4/C6/C8/N3/N7/N9)

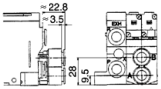
It is used for piping that extends upward or downward from the manifold.
When not installed in the manifold stations, specify the assembly part number and the mounting position by means of the manifold specification sheet.



Dual flow fitting assembly
VVQ2000-52A-$^{C10}_{N11}$

This is a fitting to multiply the flow rate by combining the outputs of 2-valve stations. It is used for driving a large bore cylinder. This is a One-touch fitting for a port size of ø10 or ø3/8".

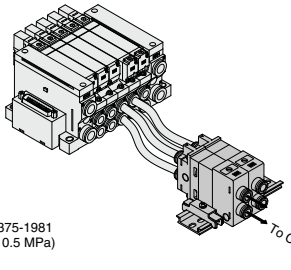
* The port size for the manifold part number is "MM".
Clearly indicate the dual flow fitting assembly part number and specify the mounting position by means of the manifold specifications.



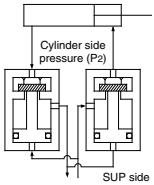
Manifold Option

Double check block (Separated) for VQ2000
VQ2000-FPG-□□-□

It is mounted on the outlet side piping to keep the cylinder in the intermediate position for a long time. Combining the double check block with a 3-position exhaust center solenoid valve will enable the cylinder to stop in the middle or maintain its position for long periods of time.
The combination with a 2-position single/double solenoid valve will prevent the dropping at the cylinder stroke end when the SUP residual pressure is released.



<Circuit diagram>



Specifications

Max. operating pressure	0.8 MPa
Min. operating pressure	0.15 MPa
Ambient and fluid temp.	–5 to 50°C
Flow characteristics: C	3.0 dm³/(s·bar)
Max. operating frequency	180 c.p.m

Note) Based on JIS B 8375-1981
(Supply pressure: 0.5 MPa)

Bracket Assembly

Part no.	Tightening torque
VQ2000-FPG-FB	0.8 to 1.0 N·m

⚠ Caution

- Air leakage from the pipe between the valve and cylinder or from the fittings will prevent the cylinder from stopping for long periods of time. Check the leakage using neutral household detergent, such as dish washing soap. Also check the cylinder's tube gasket, piston packing and rod packing for air leakage.
- Since One-touch fittings allow slight air leakage, screw piping is recommended when stopping the cylinder in the middle for long periods of time.
- Combining double check block with 3-position closed center or pressure center solenoid valve will not work.
- When fittings, etc. are being screwed to the double check block, tighten them with the torque below.

Connection threads	Proper tightening torque (N·m)
Rc 1/8	7 to 9
Rc 1/4	12 to 14

- If the exhaust of the double check block is restricted too much, the cylinder may not operate properly and may not stop intermediately.
- Set the cylinder load so that the cylinder pressure will be within two times that of the supply pressure.

Manifold Option

Double check block (Direct mounting)
VVQ2000-23A-$\overset{B}{C}\square$

It is mounted directly on the manifold to keep the cylinder in the intermediate position for a long time. Combining the double check block with a built-in pilot type double check valve and a 3-position exhaust center solenoid valve will enable the cylinder to stop in the middle or maintain its position for long periods of time.
The combination with a 2-position single/double solenoid valve will permit this block to be used for preventing the dropping at the cylinder stroke end when the SUP residual pressure is released.

Specifications

Max. operating pressure	0.7 MPa
Min. operating pressure	0.15 MPa

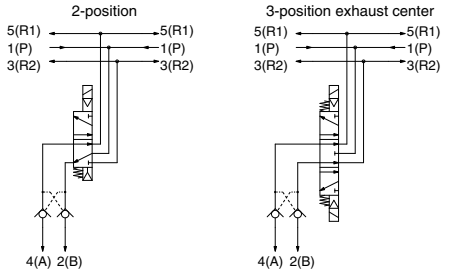
<Example>



⚠Caution

- Air leakage from the pipe between the valve and cylinder or from the fittings will prevent the cylinder from stopping for long periods of time. Check the leakage using neutral household detergent, such as dish washing soap.
  Also check the cylinder's tube gasket, piston packing and rod packing for air leakage.
- Since zero air leakage is not guaranteed, it is sometimes not possible to hold a stop position for long periods of time.
- Combining double check block with 3-position closed center or pressure center solenoid valve will not work.
- Set the cylinder load so that the cylinder pressure will be within two times that of the supply pressure.
- If the exhaust of the double check block is restricted too much, the cylinder may not operate properly and may not stop intermediately.

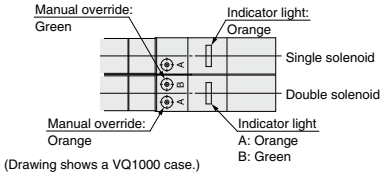
Series VQ1000/2000
Specific Product Precautions 1

Be sure to read before handling.
Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

Light/Surge Voltage Suppressor

⚠Caution

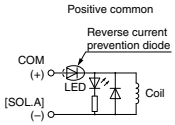
The lighting positions are concentrated on one side for both single solenoid type and double solenoid type. In the double solenoid type, A side and B side energization are indicated by two colors which match the colors of the manual overrides.



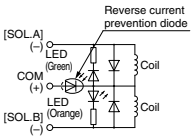
(Drawing shows a VQ1000 case.)

DC circuit diagram

Single solenoid



Double solenoid



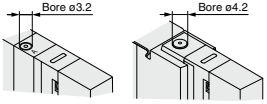
Note) A-side energization: A light (Orange) illuminates.
B-side energization: B light (Green) illuminates.
With wrong wiring prevention (stop diode) mechanism
With a surge absorption (surge absorption diode) mechanism

Manual Override

⚠Warning

Without an electric signal for the solenoid valve the manual override is used for switching the main valve. Push type is standard. (Tool required) Locking type is semi-standard. (Tool required/Manual)

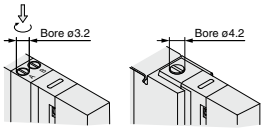
■ **Push type (Tool required)**



VQ1000 **VQ2000**

Push down on the manual override with a small screwdriver, etc. until it stops. Release the screwdriver and the manual override will return.

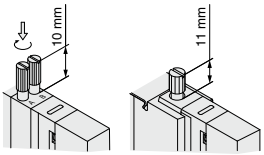
■ **Locking type (Tool required) <Semi-standard>**



VQ1000 **VQ2000**

Push down on the manual override with a flat head screwdriver until it stops. Turn it clockwise by 90° to lock it. Turn it counterclockwise to release it.

■ **Locking type (Manual) <Semi-standard>**



VQ1000 **VQ2000**

Push down on the manual override with a small flat head screwdriver or with your fingers until it stops. Turn it clockwise by 90° to lock it. Turn it counterclockwise to release it.

⚠Caution
Do not apply excessive torque when turning the locking type manual override. (0.1 N·m or less)

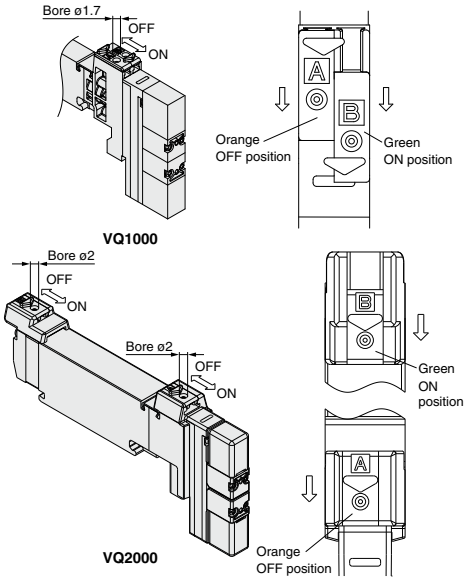
Series VQ1000/2000
Specific Product Precautions 2

Be sure to read before handling.
Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

Manual Override

⚠Warning

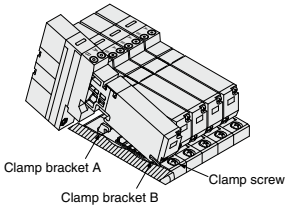
■ **Slide locking type (Manual) <Semi-standard>**



The manual override is locked by sliding it all the way to the pilot valve side (ON side) with a small flat head screwdriver or finger. Slide it to the fitting side (OFF side) to release it. In addition, it can also be used as a push type by using a screwdriver, etc., of ø1.7 or less. (ø2 or less for VQ2000).

How to Mount/Remove Solenoid Valves

⚠Caution



Removing

1. Loosen the clamp screw until it turns freely. (The screw is captive.)
2. Lift the coil side of the valve body while pressing down slightly on the screw head and remove it from the clamp bracket B. When the screw head cannot be pressed easily, gently press the area near the manual override of the valve.

How to Mount/Remove Solenoid Valves

⚠Caution

Mounting

1. Press down on the clamp screw. Clamp bracket A opens. Diagonally insert the hook on the valve end plate side into clamp B.
2. Press the valve body downward. (When the screw is released, it will be locked by clamp bracket A.)
3. Tighten the clamp screw. (Proper tightening torque: VQ1000, 0.25 to 0.35 N·m; VQ2000, 0.5 to 0.7 N·m.)

⚠Caution

Dust on the sealing surface of the gasket or solenoid valve can cause air leakage.

Replacement of Cylinder Port Fittings

⚠Caution

The cylinder port fittings are a cassette for easy replacement. The fittings are blocked by a clip. Take out the clip with a flat head screwdrier, etc., then replace the fittings.
For mounting, insert the fitting assembly until it strikes against the inside wall and then insert the clip to the specified position.

∗ Refer to "Manifold Optional Parts" on pages 1051, 1052, 1058 for other types of fittings.

⚠Caution

1. Use caution that O-rings must be free from scratches and dust. Otherwise, air leakage may result.
2. After screwing in the fittings, mount the M5 fitting assembly on the manifold base. (Tightening torque: 0.8 to 1.2 N·m)
3. Purchasing order is available in units of 10 pieces.

Series VQ1000/2000
Specific Product Precautions 3

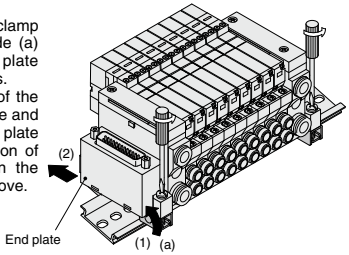
Be sure to read before handling.
Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

How to Mount/Remove DIN Rail

⚠Caution

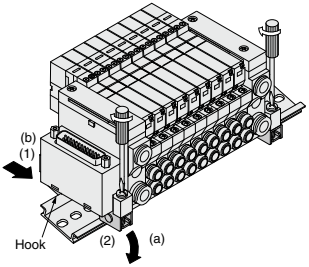
Removing

1. Loosen the clamp screw on side (a) of the end plate on both sides.
2. Lift side (a) of the manifold base and slide the end plate in the direction of (2) shown in the figure to remove.



Mounting

1. Hook side (b) of the manifold base on the DIN rail.
2. Press down side (a) and mount the end plate on the DIN rail. Tighten the clamp screw on side (a) of the end plate. The proper tightening torque for screws is 0.4 to 0.6 N·m.



IP65 Enclosure

⚠Caution

Wiring connection for models conforming to IP65 should also have enclosures equivalent to or of stricter than IP65.

Built-in Silencer Element

⚠Caution

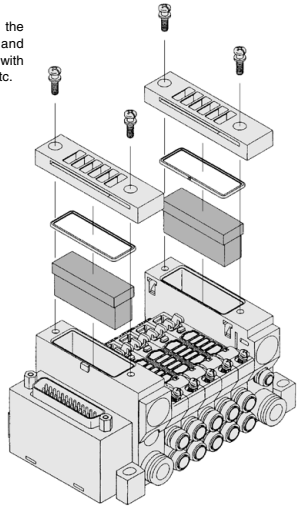
A filter element is incorporated in the end plate on both sides of the maifold base. A dirty and choked element may reduce cylinder speed or cause malfunction. Clean or replace the dirty element.

Element Part No.

Type	Element part no.	
	VQ1000	**VQ2000**
Built-in silencer, direct exhaust	VVQ1000-82A-1	VVQ2000-82A-1

The minimum order quantity is 10 pcs.

Remove the cover from the top of the end plate and remove the old element with a flat head screwdriver, etc.



How to Calculate Flow Rate

Refer to front matters 42 to 45 for obtaining the flow rate.
