

PANEL LIFTING HOOKS

Used to lift a large interior panel to position it in an enclosure lying on its back and to transport a panel from one location to another. Comfortable hand grip. Plated finish.

BULLETIN: A80

Catalog Number	Description
APLH	Two lifting hooks with handles

PANEL SUPPORT KIT

Provide additional support for panels on which heavy components are mounted. Each panel support fits over a collar stud and is then adjusted so the weight of the panel is partially supported by the bottom of the enclosure. Locknuts prevent accidental change in adjustment. A polyethylene-covered base on each panel support distributes the panel weight and prevents damage to the interior finish. Constructed of heavy-gauge steel. White finish.

BULLETIN: A80

Catalog Number	Description
APS3	Two panel supports for 1-door or 2-door enclosures where distance from bottom of panel to bottom of enclosure is less than 2.25 inches (57mm).
APS9	Two panel supports for free-standing or multi-door enclosures where distance from bottom of panel to bottom of enclosure is between 2.88 inches (73mm) and 8.50 inches (216mm).

THREADED PANEL EXTENDERS

Threaded Panel Extenders are made of plated steel and designed to raise the panel mounting surface. Extenders attach to threaded internal pads. Male and female thread size is 10-32. Each kit contains 4 extenders.
