

Features

- Provides conduit standoff of 1-1/2" or greater to meet the NEC® code
- Supports conduit up to 1-1/2" in diameter
- B18 Series supports electrical boxes and first means of support for conduit
- Minimizes the need for conduit offset bends when passing through bar joists

ERICO now offers a variety of time-saving CADDY® solutions for supporting conduit and electrical boxes under metal decking. These easy-to-install clips and fasteners meet the requirements of Section 300.4(E), which states that cables and raceways must be installed at least 1-1/2" (38 mm) under the roof decking to prevent potential damage from nails or screws.*

The TDH decking hanger and the CPNAM decking fasteners are paired with the M Series or the CD Series conduit clips for single conduit runs. The versatile SBT18 multiple conduit mounting plate is also used to suspend up to three runs of conduit.

The B18 combination conduit/electrical box hanger is designed for use with electrical box and conduit supports to deliver NEC® and CEC® compliance. With one riveted assembly, the box and conduit are properly supported.
