THE WORLD LEADER IN CLEAN AIR SOLUTIONS

AAF FIELD SERVICES

More Than Filters: Comprehensive Support for Your Facility's Air Filter Program

AIR FILTER SERVICES WITH LOCAL AAF BRANCH SUPPORT

Healthcare facility teams are being asked to do more with fewer resources. Routine filtration tasks still have to get done, but so do preventive maintenance, repairs, capital projects, compliance requirements, and the unexpected issues that arise every day.

AAF Field Services can help take air filter related work off your team's plate with support for delivery, inventory, filter changeouts, system assessments, and more. The goal is simple: help your team save time, control costs, and stay focused on higher-priority facility needs.

SPEND LESS TIME MANAGING FILTER CHANGES

Comprehensive Changeout Services

Filter changeouts across a hospital or healthcare campus can require significant labor, scheduling, and coordination. AAF can help manage scheduled filter changes from start to finish, including:

- Filter removal and replacement
- Disposal of used filters
- Visual inspection of filters and frames
- Checking magnehelic gauge readings
- Identification of frame leaks and bypass
- Replacing filter clips as needed
- Filter change date log for Joint Commission Inspections

What This Means for You:

This Total Filtration Management Program will reduce the time your maintenance team spends on routine filter changes and free up labor for other critical facility projects.

GET THE RIGHT FILTERS TO THE RIGHT PLACE

Organized Delivery & Distribution

A large filter delivery can create more work if your team still has to sort products, identify where they belong, and distribute them throughout the facility. AAF can organize filters around your facility and changeout plan.

With our Bag & Tag service, filters are grouped and labeled by building, AHU, or changeout location so your team can quickly identify where each filter belongs.

Capabilities may include:

- Next-day or scheduled delivery
- Delivery to designated facility locations
- Bag & Tag by building, AHU, or changeout location
- Custom palletization
- Orders organized around scheduled changeouts

What This Means for You:
Spend less time sorting and moving filters and give maintenance personnel a more organized path from delivery to installation.

REDUCE ONSITE STORAGE NEEDS

Offsite Inventory Management

Healthcare facilities often have limited storage space, yet filters need to be available when planned changeouts occur.

AAF branch locations can hold inventory based on your facility's requirements and planned maintenance schedule, helping reduce the need for onsite storage while keeping filters available when you need them. Orders can also be prepared in advance for monthly, quarterly, or other scheduled changeouts.

This can help:

- Reduce onsite storage requirements
- Support monthly or quarterly changeouts
- Improve product availability
- Reduce last-minute ordering
- Keep required inventory ready when you need it

What This Means for You:
Keep the filters you need accessible without dedicating valuable hospital space or staff time to managing inventory.

SERVICE THAT WORKS AROUND YOUR FACILITY'S SCHEDULE

Off-Hours Support & Emergencies

Hospital operations do not always allow air filter changeouts or service work to take place during normal business hours. AAF can work with your team to schedule service during off-hours when needed, helping minimize disruption to patient care, procedures, and day-to-day operations.

When unexpected needs arise, such as equipment issues, construction activity, damaged filters, or unplanned maintenance requirements, emergency support may also be available based on customer needs.

What This Means for You:

This Total Filtration Management Program will reduce the time your maintenance team spends on routine filter changes and free up labor for other critical facility projects.

ADD EXPERTISE WITHOUT ADDING TO YOUR STAFF

Dedicated Customer & Field Support

Lean facility teams cannot be experts in every component of an HVAC system. AAF customers have access to dedicated customer service and field support resources for:

- Product and application questions
- Troubleshooting and issue resolution
- Filter selection
- Technical questions
- Air filter program support
- Changeout planning

What This Means for You:

This Total Filtration Management Program will reduce the time your maintenance team spends on routine filter changes and free up labor for other critical facility projects.

KNOW WHAT IS IN YOUR SYSTEM

Air Filtration Site Survey

Healthcare campuses can contain dozens or even hundreds of AHUs, different filter configurations, and equipment installed or modified over many years.
AAF air filter experts can review your system to help document existing conditions and identify opportunities for improvement.

A site survey can provide greater visibility into:

- Filter sizes and quantities
- Equipment and AHU locations
- Existing air filter configurations
- Standardization opportunities
- Changeout planning
- Potential operational improvements

What This Means for You:

Reduce guesswork and create a clearer picture of what is installed throughout your facility, making purchasing, inventory planning, and maintenance easier to manage.

FIND OPPORTUNITIES TO CONTROL FILTRATION COSTS

TCO Diagnostic®

The purchase price of a filter is only one part of what it costs your facility to operate an air filtration program.

AAF's TCO Diagnostic® can evaluate factors such as:

- Filter life
- Energy use
- Labor
- Changeout frequency

The analysis can help compare air filter strategies and identify opportunities to improve overall operating cost.

What This Means for You:
Make air filter decisions based on total operating impact, not filter purchase price alone.

ADDITIONAL FACILITY SERVICES

Depending on the local market, additional services may include:

- Duct cleaning
- Coil cleaning
- UV light replacement

The analysis can help compare air filter strategies and identify opportunities to improve overall operating cost.

LET AAF HELP CARRY THE FILTRATION WORKLOAD

Whether you manage one building or an entire campus, AAF can help create a service program around your equipment, maintenance schedule, inventory requirements, and operational priorities.

Spend less time managing filters and more time managing your facility.
Talk with an AAF filtration expert about the service capabilities available for your facility.
