

LR-PB-SW

Ligature Resistant Privacy Bathroom Swinging Door

The LR-PB-SW Ligature Resistant Privacy Bathroom Swinging Door enhances patient privacy and safety in behavioral healthcare environments. At 78" tall, it provides greater visual coverage, while its flexible, shatter-resistant polycarbonate construction, sloped surfaces, and rear wall gasket help reduce ligature risks and eliminate sightlines behind the pivot. Designed for cased openings or hollow metal frames, the system offers durable, corrosion-resistant performance.

At 78" tall, the LR-PB-SW provides greater privacy helping preserve patient dignity in behavioral healthcare environments.

The 1/8" polycarbonate door is flexible, strong and shatter resistant. Its sloped profile is intended to reduce the ability to wrap or secure a ligature over the top of the door.

The polycarbonate panel is offered in frosted or white.

A gasket positioned behind the pivot helps close the space between the door assembly

and wall. This prevents patients from sliding a ligature behind the pivot while also eliminating the sightline through the rear of the assembly for increased privacy.

The system incorporates a hardcoated aluminum hinge, providing excellent resistance to corrosion and scratching for long-term durability in bathroom and shower environments.

Designed for installation within a cased opening or hollow metal door frame (by others).
