04 Transom Bolt

FOR DOUBLE DOORS

Transom Bolt

- The Transom Bolt allows a pair of doors to open and close together to gain full use of the entire opening without the necessity of releasing and securing the inactive door after every operation.
- Ideal for small double doors such as: bedrooms, master baths, closets , French doors, patio doors and offices.
- Commonly used on interior doors but can be utilized for exterior doors where UL fire ratings are not required.

Transom Bolt

OPERATION

- Close inactive door, followed by active door
- Can be locked with a conventional lock
- More convenient than manual flush bolts which require a manual release or manual locking for every simultaneous opening or closing of a pair of doors.
- Superior to automatic flush bolts in aesthetics, less exposed hardware, smoother operation and much easier to install
- Ball catch on top of active door is easily adjustable (with screwdriver) to account for variation of door to header clearances.
- Available with double ball catches for push/pull operation (specify 04DC)
