Is Your Forever Home Ready for the Future?

Good design is the key to linking comfort and safety

McKee (Photo Credit)

Whether older adults live in cozy small places in modern apartments or a century-old homestead, they are more likely to remain in their homes without the inconvenience of having to leave. A well-designed home is key to remaining safely and independently by having rooms in the places you live. This makes ready the right time to heat and cool safely and comfortably.

Here are these essential principles for design that will stand the test of time.

Convenience

An age-proof home means you'll be able to do everything you need without the risk of having to move. Even your home equity stairs can be a benefit if you have a home equity line of credit that allows you to fund home improvements. A home equity line of credit is also a great way to finance a whole home remodel, which can help keep your home safe and comfortable.

Six "Livable Home" Solutions

Adaptability

Evaluate your options and your parent's options, as well as any barrier-free options or inaccessible ones. Use the right-sized scale to accommodate the person at the front door or at the bar. A raised shower seat is a great idea to keep the person at the front door or at the bar. A raised shower seat is a great idea to keep the person at the front door or at the bar.

Simplicity

Minimize the amount of clutter in your home, and create a simple yet comfortable space. This can make it easier to keep the home clutter-free and minimize the risk of injuries. Use the right-sized scale to accommodate the person at the front door or at the bar. A raised shower seat is a great idea to keep the person at the front door or at the bar.
