

SCIENCE-BASED LETTER TO PROFESSIONALS

Dear Healthcare Professional:

In May 2022, the FDA approved Emergency Use Authorization of COVID-19 booster vaccination for children aged 5-11 years. Urgent review of these unpublicized facts should be of utmost concern to the healthcare community, particularly anyone recommending or administering genetic vaccines to children. **Are you fulfilling the legal requirement to provide Informed Consent to those receiving genetic vaccines under Emergency Use Authorization?**

- Efficacy of the 2-dose genetic vaccination in children aged 5-11 could not be determined
 - Not one participant including in the control group got severe COVID-19.
 - The extremely preliminary clinical trials included only 3,100 participants in total.
 - There are two follow-on studies to monitor myocarditis.
<https://www.nejm.org/doi/10.1056/NEJMoa2116298>
- Children are at negligible risk of death from COVID-19
 - Risk of death from COVID-19 among all causes is 1% for younger than 18 years, lower than death from car crash or suicide.
https://www.cdc.gov/nchs/nvss/vsrr/covid_weekly/index.htm#AgeAndSex
<http://doi.org/10.1056/NEJMSr1804754>
- Risks associated with genetic vaccination are higher than the risk of disease from COVID-19 for children
 - Boys aged 12-18 are at the highest risk of all age groups to develop myocarditis following vaccination. This is only one risk of many.
<https://jamanetwork.com/journals/jama/fullarticle/2788346>
<https://onlinelibrary.wiley.com/doi/10.1111/eci.13759>
- Risk of myocarditis increases after each dose of genetic vaccine.
<https://www.medrxiv.org/content/10.1101/2021.12.23.21268276v1>
- Children do NOT need the genetic vaccine
 - Like adults, children develop robust and long-lasting immunity following infection.
<https://www.nature.com/articles/s41590-021-01089-8>
- Children are NOT drivers of SARS-CoV-2 transmission.
<https://doi.org/10.1093/cid/ciaa1825>
- COVID-19 genetic vaccines are very different than traditional vaccines
 - COVID-19 genetic vaccines distribute widely throughout the body and force expression of the cell-damaging viral spike antigen in many tissues (manufacturer regulatory filings).
 - Adverse events are much more prevalent following COVID-19 genetic vaccines as compared to traditional vaccines. <http://openvaers.com/covid-data>
- mRNA vaccines have not undergone the traditional path for safety testing, are still experimental and have NO long-term safety data. <https://www.bmj.com/content/375/bmj-2021-067570>
- Genetic vaccines are ZERO percent effective against the Omicron variant just 6 months after 2 doses and neutralizing antibodies decline in a matter of weeks.
