

## Combustion controllers FR 1

**Part no. 42294**

**Combustion controllers**

### benefits

- for controlling the air supply in optimum combustion processes
- switching button with temperature scale for excellent adjustability

### Application

For temperature-dependent adjustment of the air supply damper of solid fuel and dual-fuel boilers.

### Description

The FR 1 combustion controller controls the combustion air supply. The temperature in the heat generator is detected by an integrated thermostat. The thermostat is connected to the air supply damper by means of a lever and a chain. The air supply is controlled by means of opening or closing the air supply damper, depending on the boiler flow temperature.
