

Frost protection valve for heat pumps

benefits

- for protecting monobloc or hydrosplit heat pumps against frost damage in the case of malfunctions or power outage
- helps to avoid major damage to system components
- with integrated vacuum breaker
- integrated mounting valve for easy replacement of the thermostatic element
- maintenance-free

Technical Specifications

Nominal pressure
max. 10 bar

Opening temperature (medium)
3 °C (± 1 °C)

Closing temperature (medium)
4 °C (± 1 °C)

Operating temperature range
Medium: 0/70 °C
Ambient: -30/+60 °C

Material
Housing: brass (CW617N)
spring: Stainless steel
seals: EPDM

Versions

Part no.

Frost protection valve
AAV 102

81375

Frost protection valve
AAV 302

81376
