

CAPBs® set for hydraulic balancing at radiator valves

benefits

- Set for performing hydraulic balancing with the AFRISO valve ranges VarioQ and Vario-DP directly at the radiator
- Measurement and check of differential pressure and flow rate
- can be used in conjunction with AFRISO BlueLine measuring instruments, smartphones and tablets as evaluation units
- Robust, modular system case M , suitable for box and shelf system Sor-timo-Boxx
- Step by step measurements in conjunction with the app EuroSoft® live
- Quickly create PDF documentation with signatures, photographs and additional notes and send them via smartphone or tablet
- with the app AFRISO TOOLBOX: VdZ-compliant design, documentation and confirmation of hydraulic balancing according to "Procedure A"

Application

for differential pressure measurement and flow rate adjustment at line control valves or VarioQ radiator valves during hydraulic balancing can be used with standard valves from a great variety of manufacturers

Description

CAPBs® sets line balancing and valve balancing are simple. light-weight measuring systems for performing hydraulic balancing at line fittings, line valves or VarioQ radiator valves. The free app EuroSoft® live facilitates the measurement with step-by-step operation of the measuring system. All standard valves types can be stored in the applet "Valve balancing" by entering the flow coefficient Kvs. The water volumes can be easily set at the valve without conversion. The measured flow rate and pressure values can be displayed in various units; the measurement results can be documented and shared in a matter of seconds.
