

Calcio Forte 400 wp

EC Fertilizer - Calcium Formate

Complex

COMPOSITION

Calcium Oxide (CaO) soluble in water 40%

DESCRIPTION

Calcio Forte 400 wp is a fertilizer with high Calcium content, associated with organic acids (formic acid) highly soluble in water, suitable on all crops.

We suggest the use during all phenological phases: from pre-flowering up to the harvest.

Unlike Calcium Nitrate, this solution doesn't contain nitrogen, so it can be used as a Calcium source readily available, on plants with high vegetative vigour in Biological Agriculture.

Calcio Forte WP 400 improves organoleptic characteristics of fruits and vegetables; it's quickly absorbed and make plant tissues stronger and resistant.

It's able to avoid Calcium deficiency (bitter pit, black heart, cracking, dieback, etc), increasing shelf-life of fruits.

 Appearance
Powder

 Application
Foliar

 Packaging
3 - 10 Kg

DOSES AND METHOD OF USE

Crops	Treatments	Doses
Vegetables (lettuce, beets, celery, fennel, parsley, tomato, bell pepper, aubergine, etc)	To treat every 10-15 days from transplanting or fruit set. It's possible to associate it to pesticide products.	2 - 4 Kg/ha
Industrial crops (soy, sunflower, corn, tobacco, etc)	At least 2 treatments from blooming, every 15-20 days associated with pesticide products.	2 - 5 Kg/ha
Grapevine and Actinidia	To treat from fruit set every 10-15 days associated with pesticide products.	3 - 5 Kg/ha
Stone Fruit (apricot, peach, cherry, etc)	At least 4 treatments from fruit set, every 15-20 days.	3 - 5 Kg/ha
Pome Fruit (apple, pear)	We recommend to treat just before the harvest, to avoid diseases (heating, browning, etc).	3 - 5 Kg/ha
Seedlings, Pot plants, Nurseries	To treat every 10-15 days	300 - 500 g per 1000 m ²
Fertigations, Hydroponic	Application according to the nutritional plan, with short intervals (6-8 days) for cultures with Calcium deficiency.	150 - 200 g/m ³
