

# BAIT COMBINATIONS FOR EFFECTIVE ANGLING

As anglers we are always on the look-out for new and effective bait and flavouring combinations that will increase our success. Anglers from around the country rely on us to provide them with quality baits and innovative combinations.

Your Skills + Our Bait Combinations Database = Angling Success

We're in the fortunate position to try many different baits and flavourings and test what works and what doesn't. Combine your skills with our extensive knowledge of baits and flavourings to hone your desired results.

## CREATE YOUR OWN BAIT COMBINATIONS

Fishing combinations are the arrangement, permutations, codes, patterns, orders and sequences of flavourings and baits as used on your trace or rig. It is important to notice that hook baits, feeds and shakes (powders) must be included in each combination.

## THE MAIN TYPES OF FLOURANTS:

**Essence:** This is an undiluted basic flavour that carries no base or colorant.

**Dip / Muti:** This is a combination of flavours that carries a base and colorant.

**BallDip:** This is similar to muti, but is mixed with a base to enhance the flavour and protein value.

**Spray:** This is a dip / muti / dupa with a thinner base application to allow spray mist.

Remember to use flavourings in your feed. In rare conditions, flavourings will be applied to your hook baits. The sole purpose of flavourings is to attract the fish. The fish do not actually consume it because it will have been diluted, leaving only a scent trail.

## IMPORTANT CONSIDERATIONS

1. In warm conditions or when the water is oxygenated by wind, you will use a smaller amount of liquids. Fish are more active in those conditions and do not need much encouragement to take the bait. The opposite is true when the water is still and cold.

2. Use more of the flavourings in cold weather to attract the fish as they are more docile.

## COMBINATIONS CONSIST OF 3 BASIC CATEGORIES

**1. Carriers** - Flavourings, high in protein, complementing the feed ball. Twin Series Carriers include Butter, Vanilla, Caramel, Coconut, Condensed milk, Custard, Honey, Melisse muti, FX, Legend, Lotie, N-Cell and Oxblood.

**2. Callers** - Strong flavours travel far, attracting fish to the bait.

Twin Series Callers include All Rounder, Almond, Aniseed, Bunsipce, Cinnamon, Garlic, Onion, Peppermint, Spearment, Apollo, Aquafresh, Chakalaka, Devils Fork, Dynamite, Gatvol, Gemmerkat, GP, Gumtree, Hurricane, Jumbo, Kaptein, Klipdrift, Mercury, Narkose, Perdeby, Pink Panther, Spkyker, Stuttaford, Tac, Terminator, Turf Toffee, Vicks, Vitara, Swamp, Chenel, Pampoem Pitte, Chickenblood and Ming RSA

**3. Feeders** - These are Fruity Flavourings which trigger fish to feed. Twin Series Feeders include Banana, Cherry, Grandedilla, Musk, Passion Fruit, Peach, Pineapple, Raspberry, Rhodium, Rose, Strawberry, Tutti Fruiti, Biddulphs, Bmt, Bonnie, Crusier, Gost, Has Been, Mawee, Old Spice, Oxblood, Senties, Seven Guns, Shanana, Smackerero, Sweet 16, Top Gun, Triple S, Turbo Pine, Vaaldam, Vrystaat, Artic and You Go

## HOOKBAITS

The hookbait is the main attraction, the main element the fish will focus on.

- All our baits are imitations of natural food sources of fish. The hook bait should be presented in the most enticing way that complements feeding patterns and fishing conditions.
- Instead of habitually using hook baits, vary the position, size, shape, and combination, or alternate it with other hook baits to achieve maximum results.
- The buoyancy of the hook bait in relation to the trace or rig will contribute towards your results.
- Pay special attention to the bait presentation, as it is the business end of all fishing trips.

Twin Series Hook Baits include Hard Floats, Soft Floats, Ozers, Coorn, Particles, Boilies, Tubie Doughs, Semolina Doughs and Backings

## GROUND BAIT / FEEDS

Feed is the biggest feature on the trace or rig, and the most important element of a bait combination. The feed carries the most flavouring in the sequence and has an influence on the presentation of the hook baits. Presentation is critical to your fishing success.

Twin Series Feeds include Ground Feeds, Mixed Feeds and Blits Bom

## SHAKES (POWDERS)

Shakes imitate feeding fish by creating the illusion that the sediment is disturbed by feeding fish. This inevitably attract other fish to the shake cloud.

While temperatures, air pressure and oxygen force fish to feed at different depths, the application of powder enables you to create a vertical and horizontal feeding zone. It will lure fish towards your bait.

Protein value is the most important characteristic of shakes.

Twin Series Shakes include SA Powder and Colouring Powder.

**Experiment with the information and tips contained on this page next time you go fishing and note the results. Use what works for you and change up what doesn't work. Eventually, you will be able to use your experience in creating your very own fishing combinations that work at your venues and conditions.**
