

COMPOSITION:

Crude Protein min g/kg 300

Moisture max g/kg 120

Crude Fibre max g/kg 120

Fat min g/kg 25

Calcium min/max g/kg 4.5/8

Phosphorous min g/kg 6

Molatek Bypass is a urea-free, high-quality protein concentrate for ruminants (including non-ruminant game) that consists of 30% crude protein.

ADVANTAGES:

- Uses a combination of a minimum of three different natural plant protein sources taking into account the essential amino acid profile requirements and deficiencies of ruminants.
- The amino acid profile of Molatek Bypass ensures improved muscle development, wool growth and milk production.
- Complements the microbial protein composition of the rumen, improving production in intensively kept ruminants.
- Highly effective when used in rations for high production animals, such as sheep, during late pregnancy and early lactation.

APPLICATION:

- 5 – 10% inclusion in feedlot starter rations and creep feed mixes.
- 5 – 10% in rearing rations and supplements for bulls and rams.
- 5 – 10 % inclusion in dairy rations.
- Can be used as a replacement for cotton and soya oil cake.
