CONTROL STRATEGY FOR EXTERNAL PARASITE CONTROL

ELIMINATE is a chemical alternative in conventional dip and pour-on applications that can effectively be introduced in ecto management programs.

CONTROL STRATEGY FOR INTERNAL PARASITE CONTROL

CATTLE

SUCKLING ANIMALS

... at 5/6 months of age to ensure maximum growth and weaning mass

AT WEANING

... to clean them from summer internal/external parasites for minimal loss of mass during winter

ADULT ANIMALS

- ... at end of autumn to clean out summer internal/ external parasites; and
- ... **spring/before mating** to maximize milk production (better growth of calves) and quicker regaining of condition for increased conception rate

ANTELOPE

Due to the complexity of treating antelope, please contact your local TSA for a control strategy

Use a strategic control strategy throughout the year to limit production losses caused by Internal and External parasites

Shaping the future of animal health

Effective parasite control...

FOR OPTIMUM PRODUCTION

ELIMINATE

Transdermal pour-on with broad spectrum internal and external parasite control for cattle and antelope

TRANSDERMAL POUR-ON WITH BROAD SPECTRUM INTERNAL AND EXTERNAL PARASITE CONTROL FOR CATTLE AND ANTELOPE

TRANSDERMAL TECHNOLOGY

The formulation allows the active ingredient (abamectin) to be absorbed through the skin to deliver effective and reliable parasite control

RAIN RESISTANT

The efficacy of ELIMINATE is not adversely affected if applied when the hide is wet, or if rain occurs shortly after application. However treatment of animals under these circumstances is not recommended.

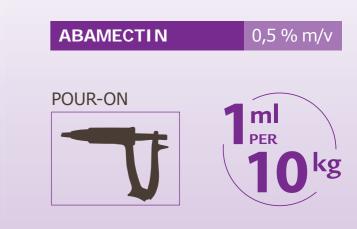

CATTLE & GAME

INTERNAL PARASITES

	IMMATURES	ADULTS	PERSISTENCY
WIREWORM	\checkmark	\checkmark	14 DAYS
BROWN STOMACHWORM*	\checkmark	\checkmark	14 DAYS

*including inhibited stages

KEY ✓ Control (≥ 90 % effective) ✓ Aids in control (60 – 89 % effective)

EXTERNAL PARASITES

Controls **BLUE TICKS** for control of blue ticks – treatment must be repeated every 21 days

Aids in the control of **MULTI-HOST TICKS**

Kills SUCKING and BITING LICE

Controls MANGE MITES

Controls **HORN FLY** (*Haematobia sp*) for up to 21 days
