

### Kalahari Lick

- High in protein to fulfil the needs of the animals during dry periods of the year, specifically on the plains of the Kalahari
- Improves the digestion of dry natural grazing by stimulating the growth and functioning of the rumen micro-organisms and consequently also increasing grazing intake
- Contains a vitamin and mineral premixture

### Recommended intake

- No further mixing is needed
- Always feed in conjunction with sufficient hay or roughage
- Feed 500 g – 800 g per day to cattle and 100 g – 180 g per day to sheep

### Composition

		Minimum	Maximum
Protein	g/kg	300	
Protein ex NPN	%		79.95
Moisture	g/kg		120
Phosphorous	g/kg	15	
Calcium	g/kg		45
Urea	g/kg		66

**Warning:** This feed contains NPN (urea) and must be fed strictly according to the instructions. This lick is a supplement and not a complete feed, thus sufficient grazing and roughages should be available. Keep food troughs full, a constant daily intake will prevent over eating and urea poisoning. Before feeding an NPN-containing lick, first give a salt-phosphate lick for 7 days. Vitamin activity decreases with time. Consult the manufacturer or a nutritionist.
