

## Winter Lick 40

- Suitable for use in bushy and sandy areas
- Enhances the digestion of dry natural grazing by stimulating the growth and functioning of the rumen micro-organisms and consequently also increasing grazing intake
- Contains a vitamin and mineral premixture
- Can be combined 50:50 with maize to make a production lick
- Ideal to use in times of fully dry and poor-quality pastures such as during the early dry season
- Also available in a concentrate form

## Recommended intake

- No further mixing is needed
- Always provide in conjunction with sufficient hay or other roughage
- Feed 400 g – 500 g per day to cattle

## Composition

		Minimum	Maximum
Protein	g/kg	400	
Protein ex NPN	%		90.3
Moisture	g/kg		120
Phosphorous	g/kg	15	
Calcium	g/kg		40
Urea	g/kg		110

**Warning:** This feed contains NPN (urea) and must be fed strictly according to the instructions. This lick is a supplement and not a complete feed, thus sufficient grazing and roughages should be available. Keep food troughs full, a constant daily intake will prevent over eating and urea poisoning. Before feeding an NPN-containing lick, first give a salt-phosphate lick for 7 days. Vitamin activity decreases with time. Consult the manufacturer or a nutritionist.
