

ORV PRODUCTION LICK

Class : Protein -Energy-Mineral Supplement for Ruminants
Reg. No. V26194 (Act 36 of 1947)
Reg. No. N-ff 2811

INGREDIENTS

Grain- and roughage products, processed grain by-products, nutritional additives.

USE

- Before lambing season
- Stimulate milk- and colostrum production
- Promote udder development
- Stimulate pasture intake
- Promotes lamb survival and lamb growth
- Outgrowth of replacement ewes

FEEDING RECOMMENDATIONS

Feed to animals that have free access to pasture and/or roughage.

Daily lick intake per animal:

- sheep 200 to 400 g
- cattle 1 000 to 1 600 g

COMPOSITION	MIN (g/kg)	MAX (g/kg)
Protein	170	
Non-protein nitrogen		45.3 %
Moisture		120
Energy MJ ME/kg estimate	9	
Fat	25	70
Fibre		100
Calcium	14	20
Phosphorous	6	
Magnesium	3	
Sulphur	4	
Urea		25

WARNING

This lick supplement contains NPN sources and must be fed strictly according to recommendations. Protect this lick against rain and it must not be fed injudiciously together with other NPN-containing feeds. Sufficient pasture and/or roughage must be available at all times. Keep lick troughs filled and prevent gluttonous eating by hungry animals. Before feeding an NPN-Vinegar is an effective remedy against NPN-poisoning. Mix in equal parts with water and dose half a bottle per calf of adult sheep and 2 to 4 bottles per head of cattle (1 bottle=750ml).
