

## PhosSure 12

PhosSure 12 is a phosphate-trace mineral concentrate, with the unique characteristic that it is weather resistant. This means that the product will not be damaged by rain. When it comes into contact with moisture, a hard, but brittle crust is formed on top of the product which protects everything underneath. The crust easily breaks up when animals lick it.

PhosSure 12 contains all the essential trace mineral as well as increased levels of copper, zinc, manganese, iodine and selenium to support optimal animal production and fertility in areas where deficiencies occur.

### Recommended use / application

Because of its rain resistant properties, PhosSure 12 is especially recommended for use in high rainfall areas. PhosSure 12 can be used in concentrates, compound feeds and mineral feeds or as a free choice supplement for cattle, sheep, goats, horses and game on phosphorous deficient grazing or good quality hay.
