

Kalori 3000

KALORI 3000 is a spray dried condensed molasses soluble (CMS) powder. CMS is derived from molasses fermentation to produce ethanol.

Recommended use / application

Kalori 3000 has a pleasant molasses taste and smell and will increase the palatability of any feed or lick to which it is added. Kalori 3000 has a low fibre and moisture content and is therefore in a very concentrated form.

Kalori 3000 will supply readily available energy to rumen micro-organisms and will also contribute to the energy value of the feed or lick to which it is added. Kalori 3000 can be used in licks, supplementary feeds and complete mixed feeds for cattle, horses, sheep and monogastric animals to increase the energy content and palatability.

Where feeds are to be pelleted, KALORI 3000 will help in the pelleting process.

Adding of KALORI 3000 to lick block formulations assures the drying and hardening of lick blocks.
