

PhosPro 17

PHOSPRO 17 is a ready mixed phosphate-salt-trace mineral and protein supplement. PHOSPRO 17 contains 17 % protein in the form of urea to supply additional protein to grazing animals on green pastures when the quality of the grass is not optimal and protein content is low.

PhosPro 17 has the unique characteristic that it is weather resistant. This means that the product will not be damaged by rain. When it rains, a hard crust is formed on top of the product. After the rain, animals quickly learn to break the crust and continue to eat the dry, undamaged lick underneath.

Recommended use / application

PHOSPRO 17 is a ready mixed product for use as a supplement for cattle, sheep and goats on green (rainy season) grazing or with good quality hay. PHOSPRO 17 can also be supplemented throughout the year and is also ideal as a transition lick in phosphorus deficient areas and areas where additional protein is needed.
