Reinforced Steel Rails

Cable Management

Concealing flat-panel televisions in wood cabinetry has never been simpler with Accuride's Quick Lift. This remote-controlled, motorized device is pre-mounted to a backboard that is easily installed in a minimal amount of time.

Features and Benefits

- **120-lb. load rating.**

- **Accommodates most flat-panel** television screens up to 50" diagonal and 33.5" tall.

- **Fits standard cabinets 34" tall.**

- **Raises to fully extended position** in approximately 15 seconds.

- **Strength and stability** provided by reinforced steel rails.

- **Cabinet design flexibility**—Minimum cabinet opening 30" wide.

- **Easy installation**—assembly is supplied pre-mounted to a 3⁄4" thick plywood backboard.

- **Mounting flexibility**—hole and slot pattern allows for maximum adjustability in positioning TV mounting bracket and television.

- **Auto-reverse technology** reverses direction of movement when the reversal deck encounters an obstruction as the lift lowers. This protects the mechanism and television.

- **Remote control systems** provide continuous movement with a single touch. Includes standard and key fob-sized remotes as well as a manually operated control box.

- **Cable management** keeps wiring clear of mechanism. Wires are simply pushed through an opening into a flexible cage that moves along with the mechanism.

- **UL/CE approved** components.

- **Black finish.**

- **Designed for turn-key installation:** no adjustments, modifications, or alterations necessary. See technical sheet for further details.
