

INTRODUCING THE DRIFTBATH™

HYDROTHERAPY EXPERIENCE

Immerse yourself into the world of hydrotherapy, and you'll find products ranging from jetted whirlpools to HotSoak baths. The newest and perhaps the most relaxing option is the DriftBath experience, available exclusively from Aquatic on select Serenity models.

Delicate ribbons of water allow you to drift away to a place of pure tranquility.

How It's Different

- Typical whirlpool and air bath systems use a mixture of air and water to create hydrotherapy action
- DriftBath delivers a more soothing, water-only experience. A soft current creates a blanket effect, rather than a vigorous swirl of air bubbles

Efficient and Quiet

- Heat generated by the motor is captured and used to keep water warm, eliminating the need for a separate inline heater
- Water flowing around the motor area dampens operating sounds and vibration

Thoughtful Details

- Thick cast-acrylic construction offers the utmost in enduring beauty
- Four LED chromotherapy lights produce a full spectrum of high-intensity colors
- Electronic, one-touch control makes it easy to switch on power and adjust lighting

For details and pricing information on specific DriftBath products, consult your Aquatic representative.
