

## Residential Shower Base Seat SPCS21 Installation

**WARNING: FAILURE TO FOLLOW THESE INSTALLATION INSTRUCTIONS COULD VOID THIS PRODUCTS WARRANTY.** These instructions are meant to be used in conjunction with the installation instructions for the shower base to be installed. They will be used during the framing of the pocket for the base. Please read all steps (for both this seat and the shower base) before starting the installation.

### **Step 1 Provide additional studding** (Figure 1)

In addition to a properly framed pocket, studding needs to be provided for the (4) flanges of the seat in the locations shown. The vertical members shall be placed 20 $\frac{3}{4}$ " (Dim 'A') from the inside corner to the centerline of the stud. Horizontal studs will be placed 16 $\frac{3}{4}$ " (Dim 'B') above the rim of the properly leveled base to the centerline of the stud. Perform a 'dry-fit' of the seat to verify studding locations. Flanges should align with studding.

### **Step 2 Predrill seat to studding** (Figure 2)

After the shower base has been properly leveled and secured according to its instructions, dry-fit the seat once again. Verify alignment and mark & predrill (3) evenly spaced holes along each of the (4) flanges (2-vertical & 2-horizontal). Note: If using a self-tapping type screw, predrilling is not necessary.

FIGURE 2

### **Step 3 Apply silicone** (Figure 3)

Clean up debris from drilling and apply a continuous bead of silicone adhesive where the seat will contact the base (Fig 3 'C'). Reposition seat back onto the base.

FIGURE 3

### **Step 4 Secure the seat**

Secure the seat to the studding using galvanized screws. Take care to not over tighten. Fill void (Figure 4) with silicone. Use backer if necessary. Clean up any excess adhesive according to the manufactures instructions.

Final installation can now be done.
