

REDUCED FUEL CONSUMPTION

Praxis gets more product to market per truck. This means Praxis makes fewer trips to market; thus, lessening fuel consumption.

NATURAL POWER SOURCES

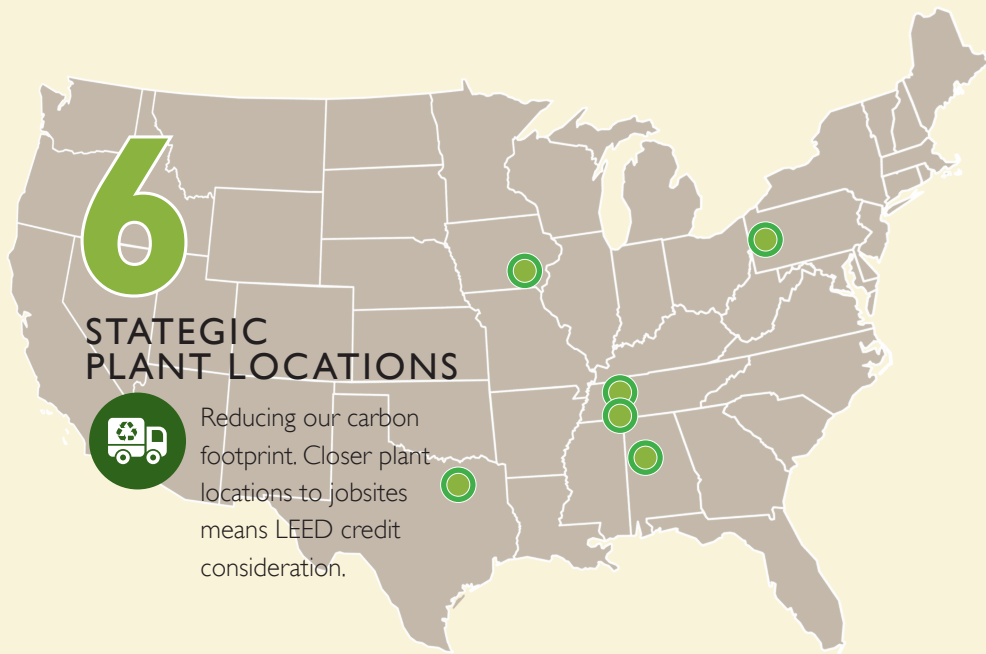

Praxis manufacturing plants are powered by natural gas and hydro-power; thus, reducing the use of coal generated electricity and emissions.

LOW STYRENE CONTENT

Both applied acrylic and thermal cast acrylic units that are produced by Praxis have low styrene content.

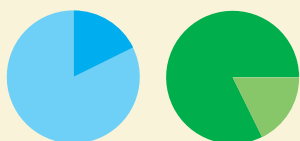

REDUCED SOLVENT USE

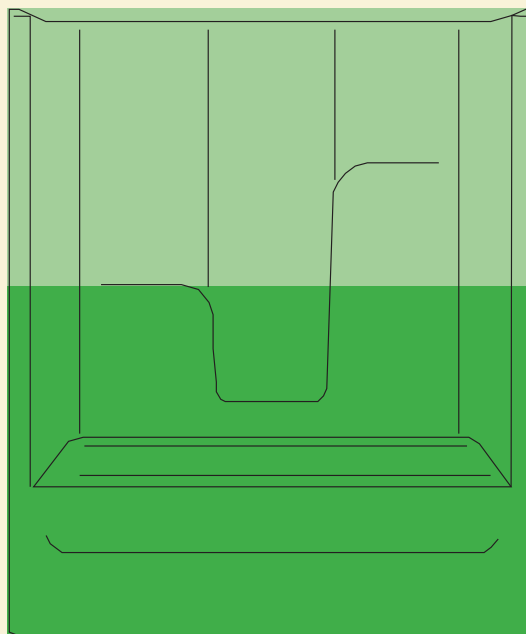

Praxis has reduced solvent use by using non-acetone, water based cleaners.

EMISSION REDUCTION

Praxis meets the US Environmental Protection Agency (EPA) MACT emission reduction requirements which require the use of low-emitting resins and work practices to reduce emissions. Praxis is further reducing emissions by only utilizing 17.7% of our permitted commercial emission permit level. That is a 82.3% reduction in potential emissions!

100%
RECYCLED PACKAGING

Praxis uses 100% recycled material for our packaging and encourages suppliers to provide the maximum amount of recycled product for all raw materials and supplies. Praxis reduces production waste by reusing and recycling cut-off materials from production. Praxis offers HDPE (high density polyethylene) seats that contain recycled materials.
