

Senior community outreach has become the care model standard for many communities that lack bed space. Most models represented in this brochure have application for home modification. So, with that purpose in mind, we have developed a comprehensive line of multi-piece options to enable remodeling with code compliant and non-code accessible showers. Visit comfortdesignbathware.com for the full multi-piece offering.

Independent Living

The "Independent" concept in Senior Living envisions a stand-alone home with all the benefits of community living. The living environment is comfortable and familiar yet safe and secure enabling the resident to remain independent, stay active and retain a well-balanced social life.

ADA-Skilled Nursing

Every Senior Living facility requires some minimum number of Code compliant showers. The challenge is to select a shower which meets every code requirement, while being pleasing to the eye, non-institutional in appearance, safe and durable. Comfort Designs Asura Collection and Sollus ProTrench models meet all these criteria.

Memory Care

Comfort Designs' showers are designed to fulfill all the needs of Memory Care residents and staff. The goal is to assist with daily activities, help awaken the senses so that, where possible, memories are awakened and relieve stress.

ADA Sollus Pro Trench & Asura

Code compliance can be synonymous with skilled nursing in that both require full adaptability of base shower models into fully accessible systems delivering the highest quality of care to the resident and the most assistance to the caregiver.

- 1 L-Bar or U-Bar model configuration
- 2 Padded fold-up seat for comfort
- 3 Open footprint configuration option
- 4 Multi-wall valve placement option
- 5 Caregiver curtain available

INDEPENDENT LIVING

Level entry showers are commonplace for Independent Living design today. The stainless trench grate cover is designed to blend with modern bathing room fixture finishes of all kinds. It is important that all accessories share a common bond of form and function.

- 1 Clean, subway tile design
- 2 Simple grab bar systems
- 3 Hand-held grab bar/slide guide
- 4 Level entry trench drain system
- 5 Contemporary, stainless, wedge-wire grate
- 6 Option for compliant door

MEMORY CARE

Showers for memory care patients are challenging for many reasons. The caregiver needs to assume control with respect. Grab bars and floors should be contrasting to the wall so they can be easily seen. This allows a confused bather to feel more comfortable and at ease during a bath.

- 1 Wing wall design creates privacy alcove
- 2 Contrasting grab bars
- 3 Contrasting floor/wall
- 4 Reduced footprint design
