MULTIPLE VA CODE COMPLIANT PRODUCTS FOR YOUR DESIGN NEEDS

Although current recommended design criteria focus on the wet room concept, the 4ft by 4ft barrier free shower is still an accepted design by the Department of Veterans Affairs. The wet room concept was developed for various reasons, but one main focus was the inability of traditional shower inserts to contain water within the shower walls.

New technology and designs have emerged for one piece shower designs such as semi-permanent dams, interior ledges adhering to recent code changes and new integral trench drains that extend from wall to wall at the opening.

New shower products have been developed for new construction and remodeling. New shower bases are available to compliment job built tile showers.
