

Decorative Bar Installation Instructions

Tools you might need for proper installation

- phillips screw driver
- mounting screws (provided)
- measuring tape
- pencil
- drill and drill bit
- 100% silicone
- caulk gun

Thank you for purchasing Praxis Bathware. For best results, please read and follow all directions carefully.

The bar is fastened to the shower wall using the provided screws. Review these instructions before you begin the installation.

It is essential the bar is installed in a manner that allows the bather to use the bar safely.

The instructions assume wood backing is present on the outside of the bathing fixture. The backing is essential to provide a solid mounting area to allow the bar to be used safely.

1. Determine the location on the shower wall where the decorative bar will be mounted.
2. Remove End Caps. Use care to avoid scratches to the finish. See Detail.
3. Carefully measure and mark the mounting hole location on the shower wall.
4. Drill pilot holes through the wall of the bathing fixture. Pilot holes should be slightly smaller than the mounting screws. Do not drill through the wood backing.
5. Apply a generous amount of 100% silicone caulking around each hole before installing the bar.
6. Fasten the decorative bar to the wall by tightening the provided mounting screws into the wood backing.

CAUTION: Do not overtighten to the point of stripping the screws. When satisfied with the fit, re-install the covers on the ends of the bar to complete the installation.

Note: If wood backing is not present, it is the responsibility

of the bar installer to ensure the decorative bar is mounted in a manner that is secure and solid to provide safe use by the bather. **ONLY** grab bars Factory Installed by the Praxis Companies LLC, will be warranted for use. Praxis Companies LLC, is not responsible or liable for any grab bar not Factory Installed by The Praxis Companies LLC.
