Intelligent tissue-remodeling technology works beneath the surface to support firmer-looking tissue, refined contours, and improved tone and texture.

CORDOVA, Tenn., Sept. 10, 2026 /PRNewswire/ -- **Aesthetic Management Partners (AMP)** today announced the addition of ATTIVA®, an intelligent subdermal radiofrequency platform, to its growing portfolio of aesthetic technologies. Designed to work beneath the skin's surface, ATTIVA delivers controlled thermal energy to support tissue remodeling and natural-looking improvements in firmness, definition, tone, and texture.

Developed for treatment of the face, neck, jawline, submental area, and body, ATTIVA offers a minimally invasive, effective option for patients seeking improvement in the look, lines, and feel of their skin, with limited downtime the majority of the time.

"Patients increasingly want meaningful, natural-looking improvements without more extensive procedures," said Erik Dowell, CEO of Aesthetic Management Partners. "ATTIVA does this, by combining precise energy delivery, real-time temperature monitoring, and treatment versatility in one platform. It is especially relevant

as significant weight loss creates new demand for solutions that support tissue quality and contour."

"We are pleased to partner with Aesthetic Management Partners to expand access to ATTIVA," said Daniele Morini, Chairman of Tema Medicina S.R.L., Bologna, Italy. "This partnership brings together Tema Medicina's intelligent subdermal radiofrequency technology and AMP's wholistic experience supporting aesthetic practices, creating a strong foundation for ATTIVA's continued growth."

Precision Energy. Intelligent Control.

ATTIVA's Intelligent Radiofrequency (iRF) technology delivers controlled thermal energy through a fine, insulated cannula placed in targeted subdermal tissue. This delivery is designed to produce immediate collagen contraction while supporting progressive collagen and elastin regeneration and improvement in the appearance of firmness, contour, tone, and texture.

Proprietary ATTIVA S.I.H.[™] Technology provides dual real-time temperature monitoring. Continuous internal and external thermal feedback supports precise energy delivery and procedural confidence.

A Timely Solution in the GLP-1 Era

As GLP-1 medications help more patients achieve significant weight loss, attention is growing around visible changes that can follow reductions in facial and body volume. By working beneath the surface, ATTIVA supports tissue remodeling and natural-looking contour improvement across multiple areas. Treatment decisions should be individualized by a qualified healthcare professional based on each patient's health, anatomy, goals and weight-loss journey.

Expanding Opportunities for Aesthetic Practices and Current Attiva Practitioners

With one platform for the face, neck, and body, ATTIVA helps practices expand beyond traditional non-invasive offerings and pursue new opportunities in minimally invasive contouring and tissue-quality treatments. Attiva owners, too, can now order their consumables on AMPSHOP (info@amplifimd.com).

About Aesthetic Management Partners

Aesthetic Management Partners provides innovative technologies, products and business solutions to aesthetic practices. Through clinical education and practice support, AMP helps providers expand treatment offerings and elevate patient experiences. Visit aestheticmanagementpartners.com.
