Supporting access for scientists in every country.

In recent years many high income countries' governments have placed unprecedented emphasis on research as a key motor for national development.

It is hugely important people in every region to have access to scientific knowledge and the outcomes of current research about their own cultural, biological, and natural heritage. We must reduce the **Knowledge Divide**.

It is also hugely important people in every region to have access to education, opportunity, training, collaboration and funding in order to be a scientist and study their own local cultural, biological, and natural heritage. We must reduce the **Research Gap**.

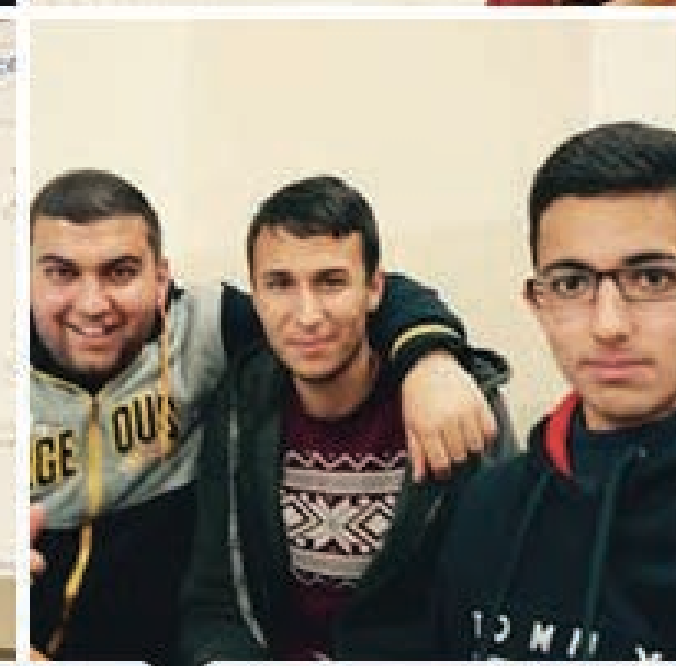

Scientific thought and its creation is
the common and shared heritage of
mankind.

SESAME

INTERNATIONAL RESEARCH CENTER

Physics Without Frontiers

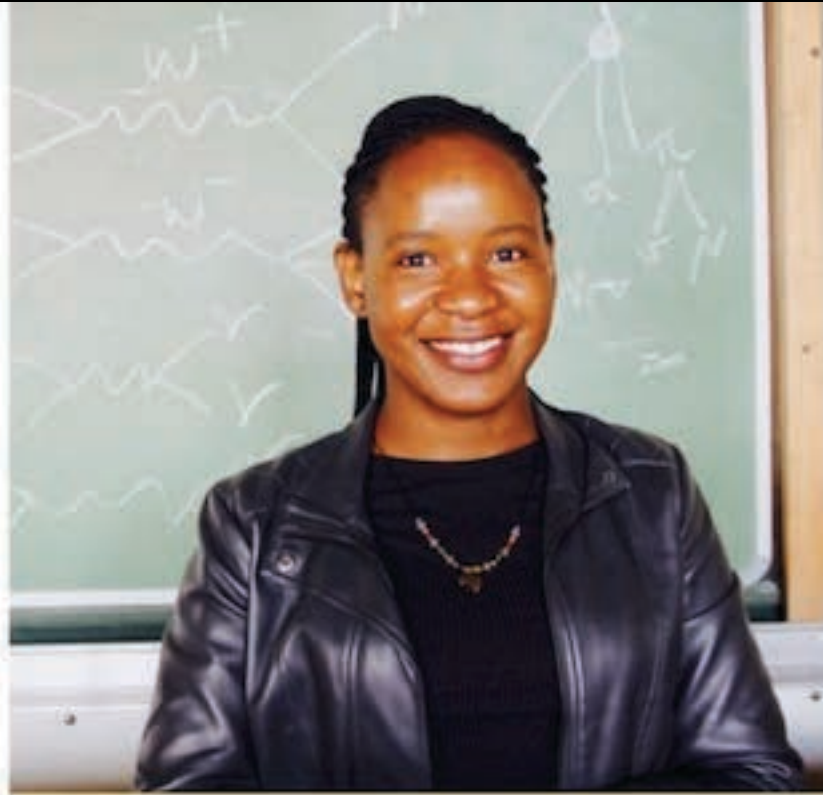

Support scientists to visit their home countries to do outreach and mentoring.

- Run sustained programs to motivate, train and educate
- Support the department and the faculty members
- Provide sustained mentoring

Over 30 countries and 100 volunteers, and over **150 alumni** scientists!!
