- NOTES:**
- Function code 25 must be set to 01 to enable the aux heat relay kit (PRARS1)
  - PRARS1 operates as a single stage of back up heat (W1)
  - Staging sequence is as shown on the diagram on the right. W1 engaged based on temperature more than 2 deg F from setpoint.
  - Function Code 18, recommended to set "Value 1" to "01" If you want to lock out the ODU based on outdoor air temp, use "Value 2" of Function 18 and set the corresponding temperature. Use "Value 3" to set whether the IDU fan should run during the AUX Heat (W1) operation.

Saddles - All Sizes				30	45	15	10

Note: The best indication of sufficient heating time is a bead of plastic forming a ring around the tool head.  
Warranty void if installing plumber is not trained and registered.

# CIRCULATORS ecocirc® XL

High efficiency large wet rotor pump for heating,  
cooling and potable water systems

3 Phase models  
coming soon

## Description

The ecocirc XL is a high efficiency, variable speed, wet rotor pump with integrated drive. The circulator is available in cast iron or lead-free bronze and has a broad operating temperature range of 14°F to 230°F (-10°C to 110°C). The ecocirc XL is suitable for both hot and chilled water systems.

The ecocirc XL circulator is designed with a highly efficient electronically commutated permanent magnet motor (ECM/PM Technology). This circulator can enhance hydronics systems with superior quality and dependability. State-of-the-art hydraulics, advanced motor design, intelligent controls, and smart communication capabilities highlight expert engineering across a broad range of HVAC and plumbing applications.

## Materials of Construction

Pump Body: Cast Iron or Lead-Free\* Bronze

Impeller: Poly-phenylene Sulfide or Stainless Steel

Shaft: AISI 420 Stainless Steel

Rotor: Permanent Magnet

Bearing: Carbon Sleeve

Gasket/O-Ring: EPDM

All Other Wetted Parts: AISI 304 Stainless Steel

Motor Type: Electronically Commutated Motor /Permanent Magnet

Motor Insulation Class: F

## Operating Data

Maximum Working Pressure: 175 PSI (12 Bar)

Minimum Working Temperature: 14°F (-10°C)

Maximum Working Temperature: 230°F (110°C)

Ambient Temperature Range: 32°F - 104°F (0°C - 40°C)

## Safety Standards And Protection

- Enclosure: Class 2, IP44 (equivalent to NEMA Type 2)
- UL Listed to UL 778; UL 1004-1, 1004-7; and UL 60730-1
- cUL Listed to C22.2 #108
- Electronically Thermally Protected (Integrated Motor Protection)
- Motor Insulation Class: F
- CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface

Note: Where potable water is pumped, use a lead-free bronze booster. ecocirc XL pumps are recommended for indoor use only.

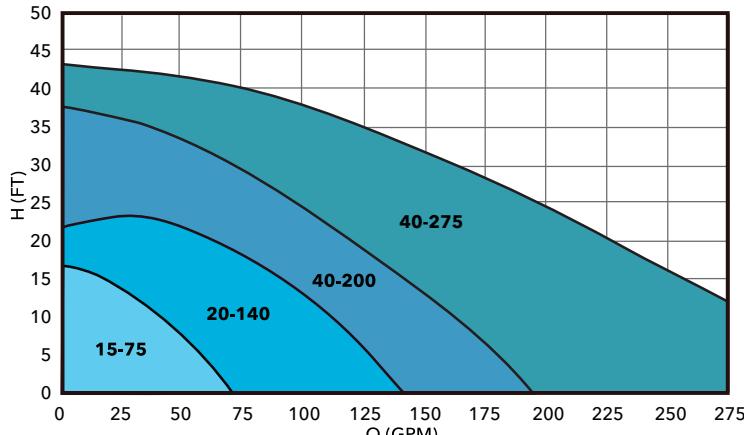

\*CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface.

\*\* Nominal HP

## ecocirc XL High Head Performance Range

## ecocirc XL High Flow Performance Range

# CIRCULATORS ecocirc® XL

High efficiency large wet rotor pump for heating, cooling and potable water systems

## STANDARD OPERATING MODES

### Constant Speed

The pump maintains a constant speed at any flow rate. The desired speed is set on the interface panel of the pump.

### Constant Pressure ( $\Delta p\text{-c}$ )

The pump maintains a constant differential pressure at any flow demand until the maximum speed is reached. The desired head of the pump can be set via user interface. Recommended for use in systems with small or constant pressure losses.

### Proportional Pressure ( $\Delta p\text{-v}$ )

The differential pressure continuously increases or decreases based on the flow demand. The set point head can be set on the pump user interface. Use for systems with large pressure losses.

### Night Mode

The pump will automatically reduce speed when there is an abrupt change in fluid temperature. The change in fluid temperature is from a boiler operating in night time setback mode. The built-in temperature sensor is used. (Fixed Speed, Constant Pressure, Proportional Pressure)

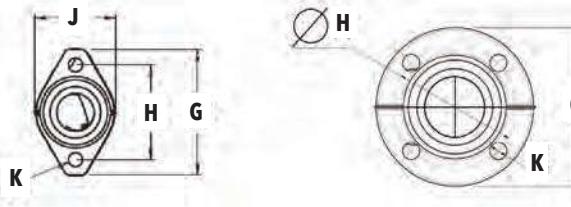

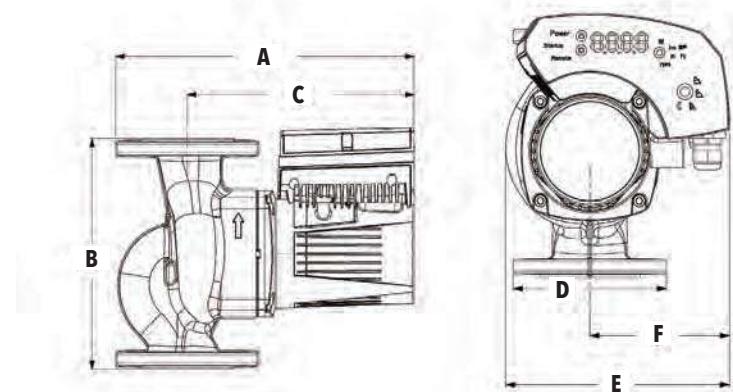

## CONSTANT TEMPERATURE SPEED CONTROL

### T- Constant Control

This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant temperature of the fluid media.

### $\Delta T$ -Constant Control

This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant differential temperature between the built-in temperature sensor and external temperature sensor.

## THE NEWEST GENERATION SMART CIRCULATOR

The newest generation variable speed ECM smart circulator, **ecocirc 20-18** from Bell & Gossett provides a superior product for both heating and cooling as well as potable water.

Taking it further than ever before is our new **ecocirc+ 20-18** model that allows for wireless connectivity directly to your phone for full control. Combine this pump with our incredible service network, and you have a winner.

### ecocirc+ 20-18 Features

The ecocirc+ 20-18 comes with all of the standard features found on the ecocirc 20-18 plus the following premium features:

- Bluetooth communication+
- 0-10V input+
- Temperature control+
- eAdapt autolearn and Night Mode+
- Digital display+

### ecocirc 20-18 Features

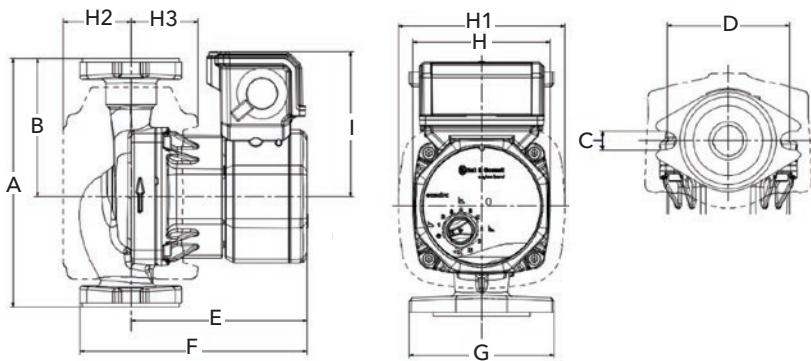

- Maximum of 20 feet of head or 18 GPM
- 70W maximum power
- 3 modes - proportional pressure, constant pressure, or adjustable speed control
- Fluid temperature: 14-230°F
- **CircGuard™** - complete integrated system protection
- Automatic air purge to remove any air trapped in the pump
- One turn knob and multicolor LED display for easy reading and setting of the pump
- Check valve included in box
- Insulation shell included

**Bell & Gossett**  
a **xylem** brand

# SERVICE KIT FOR HYDRONIC HEATING SYSTEM

QUALITY

INNOVATION

RELIABILITY

## SERVICE KIT FOR HEATING SYSTEM

Calefactio's wall support for hydronic heating system allows for a safe, practical and easily accessible installation.

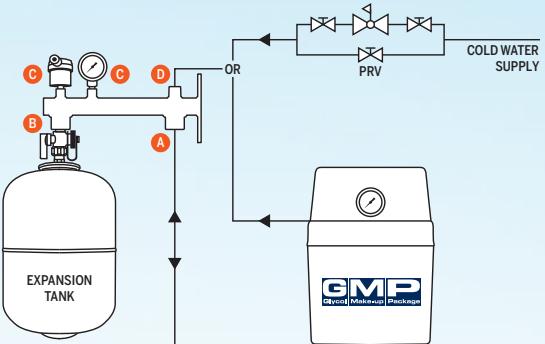

In addition to secure your installation in the event of a tank failure, the service center gives a complete overview of the system.

KIT	CONTAINS
#SERVICEKIT15	+ HGT-15 + HGSC-MULTI + R8818 + HGSV12 + GAGEO-30BOTTOM OR GAGEO-100BOTTOM
#SERVICEKIT30	+ HGT-30 + HGSC-MULTI + R8818 + HGSV12 + GAGEO-30BOTTOM OR GAGEO-100BOTTOM
#SERVICEKIT60M	+ HGT-60M + HGSC-MULTI + R8818 + HGSV12 + GAGEO-30BOTTOM OR GAGEO-100BOTTOM
#SERVICEKIT60	+ HGT-60 + HGSC-MULTI + R8818 + HGSV12 + GAGEO-30BOTTOM OR GAGEO-100BOTTOM

## INSTALLATION

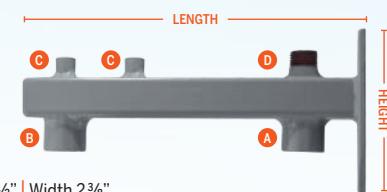

Link your heating system to the  $\frac{1}{2}$ " FNPT connection **A**. Connect directly a heating expansion tank (HGT-15, HGT-30, HGT-60M or HGT-60), with the Service valve (HGSV12) on the  $\frac{1}{2}$ " FNPT connection **B**. Then, on connections **C** ( $\frac{1}{8}$ " FNPT), connect an automatic air vent (R8818) and a pressure gage (GAGEO-30BOTTOM or GAGEO-100BOTTOM). On connection **D** ( $\frac{1}{8}$ " MNPT) you can either connect your GMP or simply the cold water supply.

## DIMENSIONS

\*NA prefix indicates ASME tagged and registered with the National Board of Boiler and Pressure Vessel Inspectors.

### Hydronic Separator

The hydronic separator creates a zone with a low pressure loss, which enables the primary and secondary circuits connected to it to be hydraulically independent of each other; the flow in one circuit does not create a flow in the other.

**Maximum recommended flow rates in GPM and volume capacity in gallons.**

G tech. broch. 01249

Combination 1. air, 2. hydraulic and 3. dirt separation, plus 4. magnetic separation. Epoxy resin coated steel body. Stainless steel internal coalescing mesh. Three neodymium magnets. Complete with: automatic air vent (code 501502A). air vent shut-off valve (code NA39589). drain valve (code NA59600). ANSI 150 flange connections. Thermometer pockets (NPT): 1/2" inlet/outlet flanges, 3/4" front center. Max. working pressure: 150 psi. Vessel temperature range: 32–270°F. Particle separation capacity: to 5 µm (0.2 mil). ASME U-stamp tagged and registered with the National Board of Boiler and Pressure Vessel Inspectors; CRN consult factory.

In the SEP<sup>4</sup>™ hydraulic separators ferrous impurities are captured by a concentrated magnetic field created by a stack of neodymium rare-earth magnets positioned inside a brass dry-well which is below the flow stream. Non-magnetic dirt particles are separated by colliding with an internal element in the flow stream and settling to the bottom. The dirt and ferrous impurities are flushed out while the system is operating, by removing the magnets and opening the purge valve.

Condensate Management Guide

**InnoFlue Flex**  
Product Overview

## Lubricant

Centrocerin
IACE50

Intertek

InnoFlue® is the first polymeric vent system tested and listed to **ULC-S636** and **UL-1738** in North America

## Vent Lengths

InnoFlue never requires glues, solvents or primers. Each component has a socket, and a male/female fitting connection. Apply Centrocerin lubricant and push together

## Best practices for installing FasNseal single wall vent pipe

### The Must Do's:

- Fully seat male end into female gasketed end (see Fig. 1)
- Properly pitch vent pipe a minimum  $\frac{1}{4}$ " per foot, noting appliance manufacturers' requirements, whichever is greater
- Support vent pipe at intervals of no greater than 6' spacing

### The Should Do's:

- Lubricate and Twist – Use Spray Silicone or WD-40 lubricant on male pipe end prior to fitting into female gasketed end (See Fig. 2)
- Push and twist to fully seat connection
- Use adjustable lengths to avoid cutting straight length pieces
- Use Adjustable lengths on vertical and horizontal run to limit pitch issues (See Fig. 3). Adjustable lengths must penetrate a minimum of 4" to assure proper seal and structural integrity
- Cut ends must be squared; deburred and seated a minimum 2" into female gasketed end

### FasNFlex Note:

- When attaching to FasFlex flexible liner, be sure to note the liner is directional. The arrow on the liner indicates flue gas direction. Failure to install in the correct orientation will result in condensate issues within the venting system
- FasNFlex is approved for vertical installation only

## ALPHA1 Technical Data

ALPHA1	
Flow, Q:	max. 21 gpm (80 lpm)
Head, H:	max. 19 ft. (5.8 m )
Motor:	1 x 115V
Liquid temp.:	36°F to 230°F (2°C to 110°C)
Working Pressure:	max. 150 PSI
Watts:	5-45 W
Amps:	0.65 A
Approvals:	ETL, NSF 61, NSF 372 Canadian ICES-003

## Product Offering

Product Number	Model	Description
99287256	ALPHA1 15-55 F	Cast iron flange with terminal box
99287259	ALPHA1 15-55 FR	Cast iron rotated flange with terminal box
99287262	ALPHA1 15-55 SF	Stainless flange with terminal box
99285998	ALPHA1 15-55 F/LC	Cast iron flange with line cord
99287244	ALPHA1 15-55 FR/LC	Cast iron rotated flange with line cord
99287250	ALPHA1 15-55 SF/LC	Stainless flange with line cord

## Performance Data

- • Push-button for selection of pump setting
  - Every time the push-button is pressed, the circulator pump setting is changed.
- III **Constant Pressure III**
  - The duty point of the pump will move left and right along the highest constant-pressure curve depending on the water demand in the system.
- II **Constant Pressure II**
  - The duty point of the pump will move left and right along the middle constant-pressure curve depending on the water demand in the system.
- I **Constant Pressure I**
  - The duty point of the pump will move left and right along the lowest constant-pressure curve depending on the water demand in the system.

1	CMBE 1-44	CMBE 1-44	CMBE 3-30	CMBE 3-62

### Preconditions:

- A tap pressure of 45 psi is considered, to achieve a pressure of 60 psi, add two floors.
- Flooded suction: Add more floors to compensate for low suction pressure.
- 7.9 gpm per tap average usage pattern is taken into account.

Grundfos cannot be held responsible for wrong sizing based on this guide.

\*DOE test method based on 90°F. Temperature rise, 50°/140° w/boiler water at 180°/200°F

\*\* Residential Double Wall Indirect available. Stainless steel tank w/ high efficiency cupronickel double wall heat exchanger.

NOTE: TANK RECOVERY FROM COLD START WILL BE BETWEEN 10-13 MINUTES WHEN SIZED WITH CORRECT FLOW RATE, BOILER SIZE, AND PRESSURE DROP RATINGS FROM INSTALLATION INSTRUCTIONS. THE MASS OF THE BOILER WILL AFFECT RECOVERY TIME, MORE BOILER MASS EQUALS LONGER RECOVERY TIME.

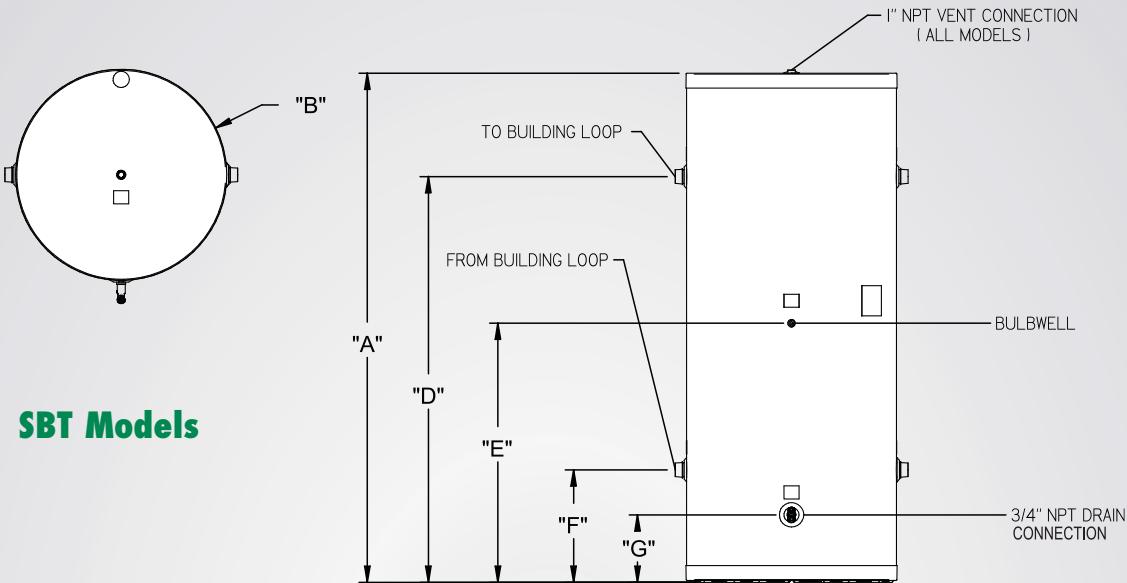

### STANDARD FEATURES

- 316L Stainless Steel
- Finned 90/10 Cupronickel Heat Exchanger
- Aquastat Control

### STANDARD FEATURES

- › R-13.4 insulation for minimal heat loss
- › Textured, impact resistant polymer jacket
- › Light-weight 316L stainless steel tank construction
- › Bulbwell
- › Drain and air vent connections
- › 5 year tank warranty

All models standard with a 5 Year Limited Warranty Against Tank Failure.

Information subject to change without notice. Change "N" to "L" for LP gas models. The Net AHRI Water Ratings shown are based on a piping and pickup allowance of 1.15. Lochinvar should be consulted before selecting a boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc. The ratings have been determined under the provisions governing forced draft burners.

## SMART CONTROL™ FUNCTIONS AND FEATURES

### SMART CONTROL™ FEATURES

- SMART CONTROL Digital Operating Control  
LCD Display with words not codes
- Outdoor Reset Control with Outdoor Air Sensor
- Domestic Hot Water Prioritization  
Separately Adjustable Space Heat/DHW Switching Times
- Programmable System Efficiency Optimizers  
Space Heating Max Rate Limiting  
Anti Cycling  
Outdoor Air Reset Curve
- Three Pump Control  
System Pump  
Boiler Pump  
DHW Pump
- High-Voltage Junction Box  
120 VAC / 60 Hertz / 1 Phase Power Supply
- Low Voltage Terminal Strip  
Flow Switch Contacts  
Tank Sensor Contacts  
SH Thermostat Contacts  
DHW Thermostat Contacts  
Low-Water Cutoff Connection  
System Sensor Contacts  
Outdoor Air Sensor Contacts  
Cascade Contacts

- Time Clock for Data Logging  
Last 10 Lockouts
- Low-Water Flow Safety Control & Indication
- Password Security
- Built-in Cascading Sequencer for up to 8 units  
Multiple Size Boiler Cascade

### STANDARD FEATURES

- Modulating Burner with 10:1 Turndown  
Direct-Spark Ignition  
Low-NOx Operation
- ASME Stainless Steel Heat Exchanger
- Vertical & Horizontal Direct-Vent  
PVC, CPVC, Polypropylene or SS Venting  
up to 100 feet
- Condensate Trap
- California Code Compliant
- Other Features  
Automatic Reset High Limit  
Adjustable High Limit w/Manual Reset  
Wall-Mount Bracket  
Zero Clearances to Combustible Materials  
10-Year HEX Warranty (See Warranty for Details)  
5-Year Parts Warranty

### OPTIONAL EQUIPMENT

- Low-Water Cutoff w/Manual Reset & Test
- Concentric Vent Kit
- Condensate Neutralization Kit
- Sidewall Vent Termination
- Floor Stand
- Wireless Outdoor Sensor
- Nat to LP Gas Conversion Kit

Change 'N' to 'L' for LP Gas models. No derate for LP models. Performance data is based on manufacturer test results. All information is subject to change.

\*The Net AHRI Water Ratings shown are based on a piping and pickup allowance of 1.15. \*Lochinvar should be consulted before selecting a boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc. \*The ratings have been determined under the provisions governing forced draft burners.

## STANDARD FEATURES

- › 97% Thermal Efficiency
- › Modulating Burner with 10:1 Turndown
  - Direct Spark Ignition
  - Low NOx Operation
  - Sealed Combustion
  - Low Gas Pressure Operation
- › Stainless Steel Water Tube Heat Exchanger
  - ASME-Certified, "H" Stamped
  - 160 psi Working Pressure
  - 50 psi Relief Valve
  - Combustion Analyzer Test Port
  - Fully Welded Design
- › Vertical and Horizontal Direct Vent
  - Direct Vent up to 150 feet
  - PVC, CPVC, Polypropylene or AL29-4C
- › Smart System Control
- › Other Features
  - On/Off Switch
  - Adjustable High Limit with Manual Reset
  - Automatic Reset High Limit
  - Flow Switch
  - Flue Temperature Sensor
  - Low Air Pressure Switch
  - Temperature and Pressure Gauge
  - Condensate Trap
  - 10-Year Limited Warranty (See Warranty)

## SMART SYSTEM FEATURES

- › CON-X-US Remote Connect
- › Smart Touch Touchscreen Operating Control
- › Full Color 7" Touchscreen LCD Display
- › Loch-N-Link® USB Thumb Drive Port for Easy Programming
- Building Recirculation Pump Start/Stop
- Proving Switch Contacts
- Alarm Contacts
- Runtime Contacts
- 3 Space Heat Thermostat Contacts
- Tank Thermostat Contacts
- System Sensor Contacts

### › Cascading Sequencer with Built-in Redundancy

- Selectable Cascade Type:
- Lead Lag/Efficiency Optimization
- Multiple Size Boilers
- Front-End Loading
- › 3 Reset Temperatures Inputs w/Independent Outdoor Reset Curves for Each
- Outdoor Sensor
- › Four-Pump Control
  - System Pump with Parameter for Continuous Operation
  - Boiler Pump with Variable-Speed Control
  - Domestic Hot Water Boiler Pump
  - Domestic Hot Water Recirculation Pump Control with Sensor
- › Building Management System Integration
  - 0-10 VDC Input to Control Modulation or Setpoint
  - 0-10 VDC Input from Variable-Speed System Pump
  - 0-10 VDC Modulation Rate Output Signal
  - 0-10 VDC Enable/Disable Signal

### › Programmable System Efficiency Optimizers

- Space Heating Night Setback
- DHW Night Setback
- Anti-Cycling
- Ramp Delay
- Boost Time and Temperature

### › High-Voltage Terminal Strip

- 120 VAC/60 Hertz/1 Phase

- Pump Contacts for 3 Pumps

### › Low-Voltage Terminal Strip

- Building Recirculation Pump Start/Stop

- Proving Switch Contacts

- Alarm Contacts

- Runtime Contacts

- 3 Space Heat Thermostat Contacts

- Tank Thermostat Contacts

- System Sensor Contacts

### Tank Sensor Contacts

- Cascade Contacts
- 0-10 VDC BMS Contacts
- 0-10 VDC Boiler Rate Output Contacts
- 0-10 VDC Boiler Pump Speed Contacts
- 0-10 VDC System Pump Speed Contacts
- ModBus/BACnet Contacts

### › Time Clock

### › Data Logging

- Ignition Attempts
- Last 10 Lockouts
- Space Heat Run Hours
- Domestic Hot Water Run Hours
- Custom Maintenance Reminder with Contact Info
- Password Security
- Customizable Freeze Protection Parameters

## OPTIONAL EQUIPMENT

- Wireless Outdoor Temperature Sensor
- Multi-Temperature Loop Control
- Variable-Speed Boiler Circulator
- Constant-Speed Boiler Circulator
- Common Vent Damper Kit
- ModBus Communication
- BMS Gateway to BACnet or LonWorks
- BACnet MSTP
- Alarm Bell
- Condensate Neutralization Kit
- Concentric Vent Kit (KBX0400-KBX650)
- High and Low Gas Pressure Switches w/Manual Reset (KBX0500-KBX1000)
- › Firing Controls
  - M9-Standard Construction
  - M13-CSD-1/FM/GE Gap (KBX0500-KBX1000)

\*Information subject to change without notice. Dimensions are in inches. Select "N" or "L" for Natural or LP gas. \*The Net AHRI Water Ratings shown are based on a piping and pickup allowance of 1.15. \*Lochinvar should be consulted before selecting a boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc. \*The ratings have been determined under the provisions governing forced draft burners.

### SMART SYSTEM FEATURES

- **Smart System Digital Operating Control**  
Multi-Color Graphic LCD Display w/Navigation Dial
- **Loch-N-Link™ USB Thumb Drive Port for Easy Programming**
- **Cascading Sequencer with Built-in Redundancy**  
Selectable Cascade Type:  
Lead Lag/Efficiency Optimization  
Multiple Size Boilers  
Front-End Loading
- **3 Reset Temperatures Inputs w/Independent Outdoor Reset Curves for Each Outdoor Sensor**
- **Four-Pump Control**  
System Pump with Parameter for Continuous Operation  
Boiler Pump with Variable-Speed Control  
Domestic Hot Water Boiler Pump  
Domestic Hot Water Recirculation Pump Control with Sensor
- **Building Management System Integration**  
0-10 VDC Input to Control Modulation or Setpoint  
0-10 VDC Input from Variable-Speed System Pump  
0-10 VDC Modulation Rate Output Signal  
0-10 VDC Enable/Disable Signal
- **Programmable System Efficiency Optimizers**  
Space Heating Night Setback  
DHW Night Setback  
Anti-Cycling  
Ramp Delay  
Boost Time and Temperature
- **High-Voltage Terminal Strip**  
120 VAC/60 Hertz/1 Phase  
Pump Contacts for 3 Pumps

### ➤ Low-Voltage Terminal Strip

- Building Recirculation Pump Start/Stop
- Proving Switch Contacts
- Flow Switch Contacts
- Alarm Contacts
- Runtime Contacts
- 3 Space Heat Thermostat Contacts
- Tank Thermostat Contacts
- System Sensor Contacts
- Tank Sensor Contacts
- Cascade Contacts
- 0-10 VDC BMS Contacts
- 0-10 VDC Boiler Rate Output Contacts
- 0-10 VDC Boiler Pump Speed Contacts
- 0-10 VDC System Pump Speed Contacts
- ModBus Contacts

### ➤ Time Clock

- **Data Logging**  
Ignition Attempts  
Last 10 Lockouts  
Space Heat Run Hours  
Domestic Hot Water Run Hours

### STANDARD FEATURES

- **97%-98% Thermal Efficiency**
- **Modulating Burner with up to 10:1 Turndown**  
Direct Spark Ignition  
Low NOx Operation  
Sealed Combustion  
Low Gas Pressure Operation
- **Stainless Steel Fire-Tube Heat Exchanger**  
ASME-Certified, "H" Stamped  
160 psi Working Pressure  
50 psi Relief Valve  
Combustion Analyzer Test Port  
Fully Welded Design

### ➤ Vertical and Horizontal Direct Vent

- Direct Vent up to 100 feet
- PVC, CPVC, Polypropylene or AL29-4C
- Factory Supplied Sidewall Vent Termination

### ➤ Smart System Control

- **Other Features**  
On/Off Switch  
Adjustable High Limit with Manual Reset  
Automatic Reset High Limit  
Manual Reset Low Water Cutoff  
Flue Temperature Sensor  
Low Air Pressure Switch  
Temperature and Pressure Gauge  
Condensate Trap  
Zero Service Clearances  
10-Year Limited Warranty (See Warranty)  
Custom Maintenance Reminder with Contact Info  
Password Security  
Customizable Freeze Protection Parameters

### OPTIONAL EQUIPMENT

- CON-X-US® Remote Connectivity
- Motorized Isolation Valve
- Wireless Outdoor Temperature Sensor
- Multi-Temperature Loop Control
- Variable-Speed Boiler Circulator
- Constant-Speed Boiler Circulator
- ModBus Communication
- Alarm Bell
- Condensate Neutralization Kit
- Concentric Vent Kit (FTX400-FTX600)
- BMS Gateway to BACnet or LonWorks
- High and Low Gas Pressure Switches w/Manual Reset (FTX500-FTX850)
- **Firing Controls**  
M9-Standard Construction  
M13-CSD-1/FM/GE Gap (FTX500-FTX850)

00 CIRCULATORS

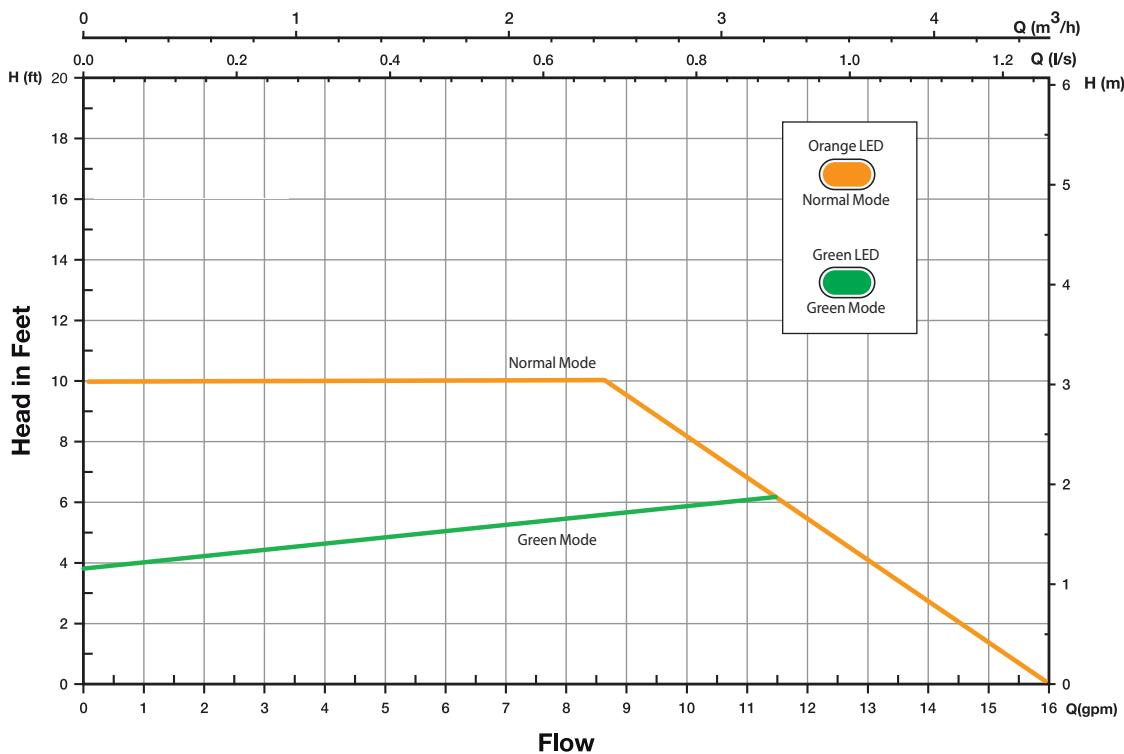

FLOW-M3/H

# Taco 007e

## Performance Curves

### 007e® Performance Curves

The 007e performance is ideal for hydronic zoning to reduce velocity noise or banging of zone valves closing against high head pressure circulators.

The 007e has an additional Green Mode operating curve that will self-adjust automatically.

**Green Mode:** After 7 days of constant running, the 007e will adjust its curve to Low Proportional Pressure curve for power optimization. (See Green Mode curve above) LED will change to green. The 007e will reset to the original normal mode curve every time it cycles OFF.

The 3-Way Brass Mixing Valves 710, 711, 712, 713, and 714 are used to mix supply water from a heat source with water returning from a system. They are designed for use in either closed loop or open loop hydronic systems. All valves have standard female NPT threads. The valve provides a maximum leak through rate of 1% to allow for water expansion during temperature changes. The valve position can be manually set using the handle. An Actuating Motor 741 can be used to automatically operate the valve.

### Sequence of Operation

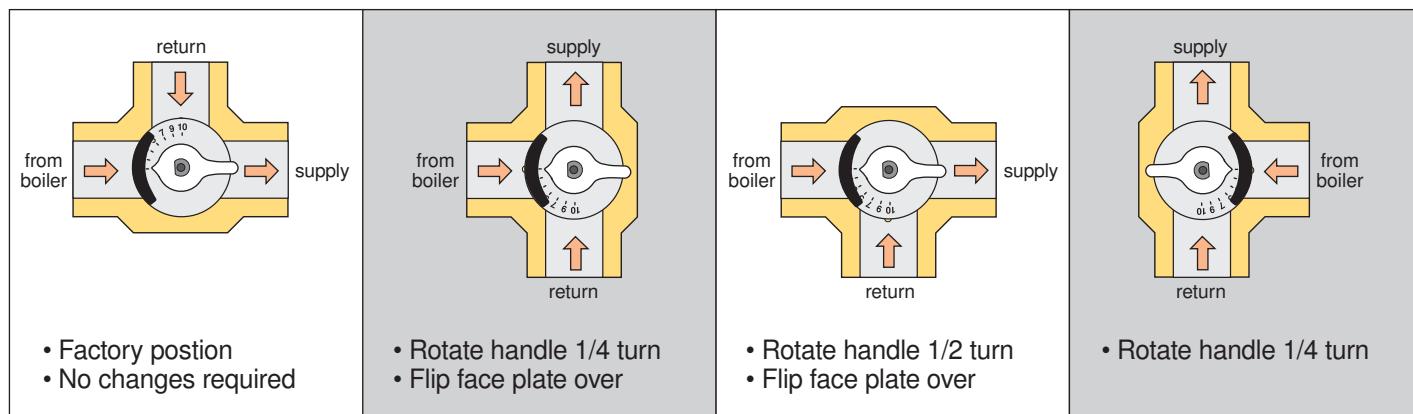

When the flap is in the fully closed position, 100% of the heating system return water is supplied to the system. When the valve flap is in the fully open position, 100% of the boiler supply water enters the heating system. Mixing of the water takes place when the valve flap is in an intermediate position.

### Installation

Check the contents of the package. If any of the items listed below are missing or damaged, please refer to the Limited Warranty and Product Return Procedure on the back of this brochure and contact your wholesaler or local tekmar representative.

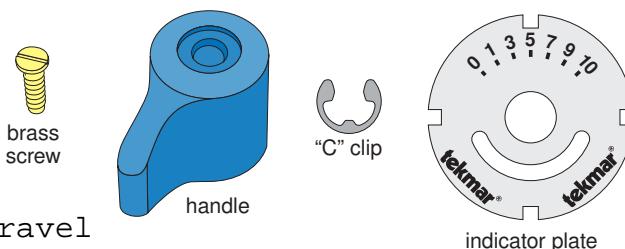

*Types 710 - 714 include*

- One Mixing Valve & One Data Brochure D 710

### Replacement Parts

The Mixing Valve Handle Kit M3047 contains a replacement manual valve handle, a brass screw, a "C" clip, and a position indicator plate.

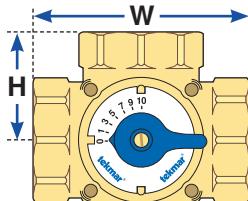

Pointer and flat of shaft point to the closed off port. It should only ever travel between "from boiler" and "return" ports.

Set pointer to "from boiler" which is closed position then set actuator to close position and mount it to valve. Check proper rotation on startup.

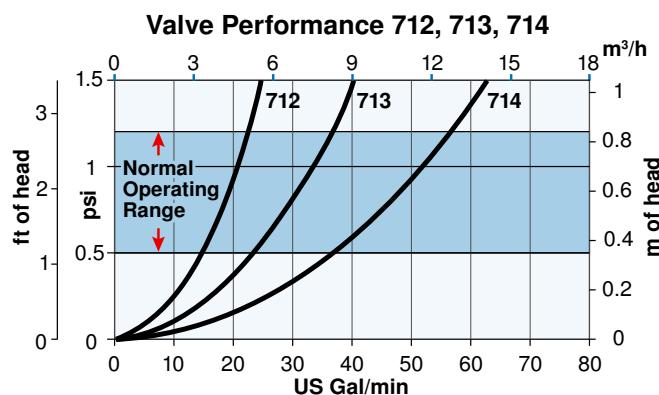

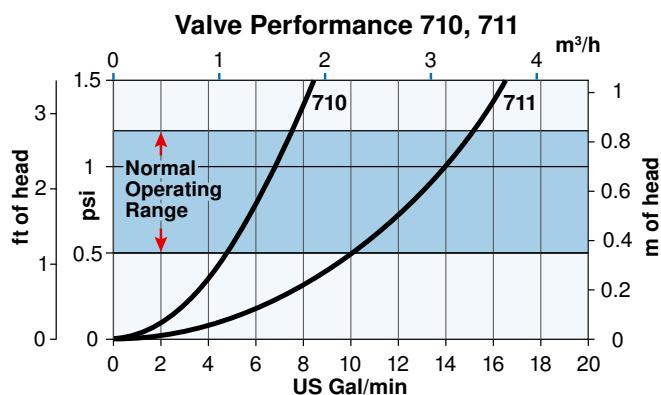

## Technical Data

### 3-Way Mixing Valves 710 - 714 Brass

Literature	— D 710	Acceptable Fluid Media	— Chilled and hot water with antifreeze and anticorrosive compounds (max 60%), glycol, ethyl alcohol glycol, propylene dichloride alcohol, mono ethyl alcohol, ethyl methyl alcohol, glycerine.
Maximum Operating Pressure	— 146 psi (10 bar)		
Operating Temperature Range	— -20 to 248°F (-28 to 120°C)		
Valve Body and Vane	— CW 617N - EN 12165 Brass		
Shaft Seal	— Viton "O" ring		
Main Seal	— EPDM Peroxide "O" ring		<i>Not for use with media based on mineral oil components or chlorinated pool water.</i>

Type	Pipe Size	CV Value	Dimension H	Dimension W	Packaged Weight
710	3/4"	7	1-1/2" (38 mm)	3" (76 mm)	1.9 lbs (860 g)
711	1"	14	1-1/2" (38 mm)	3" (76 mm)	1.6 lbs (730 g)
712	1-1/4"	21	1-5/8" (41 mm)	3-1/4" (82 mm)	1.8 lbs (800 g)
713	1-1/2"	32	2-3/16" (56 mm)	4-3/8" (111 mm)	6.7 lbs (3020 g)
714	2"	51	2-5/16" (60 mm)	4-5/8" (119 mm)	5.6 lbs (2520 g)

### Limited Warranty and Product Return Procedure

**Limited Warranty** The liability of tekmar under this warranty is limited. The Purchaser, by taking receipt of any tekmar product ("Product"), acknowledges the terms of the Limited Warranty in effect at the time of such Product sale and acknowledges that it has read and understands same.

The tekmar Limited Warranty to the Purchaser on the Products sold hereunder is a manufacturer's pass-through warranty which the Purchaser is authorized to pass through to its customers. Under the Limited Warranty, each tekmar Product is warranted against defects in workmanship and materials if the Product is installed and used in compliance with tekmar's instructions, ordinary wear and tear excepted. The pass-through warranty period is for a period of twenty-four (24) months from the production date if the Product is not installed during that period, or twelve (12) months from the documented date of installation if installed within twenty-four (24) months from the production date.

The liability of tekmar under the Limited Warranty shall be limited to, at tekmar's sole discretion: the cost of parts and labor provided by tekmar to repair defects in materials and/or workmanship of the defective product; or to the exchange of the defective product for a warranty replacement product; or to the granting of credit limited to the original cost of the defective product, and such repair, exchange or credit shall be the sole remedy available from tekmar, and, without limiting the foregoing in any way, tekmar is not responsible, in contract, tort or strict product liability, for any other losses, costs, expenses, inconveniences, or damages, whether direct, indirect, special, secondary, incidental or consequential, arising from ownership or use of the product, or from defects in workmanship or materials, including any liability for fundamental breach of contract.

The pass-through Limited Warranty applies only to those defective Products returned to tekmar during the warranty period. This Limited Warranty does not cover the cost of the parts or labor to remove or transport the defective Product, or to reinstall the repaired or replacement Product, all such costs and expenses being subject to Purchaser's agreement and warranty with its customers.

Any representations or warranties about the Products made by Purchaser to its customers which are different from or in excess of the tekmar Limited Warranty are

the Purchaser's sole responsibility and obligation. Purchaser shall indemnify and hold tekmar harmless from and against any and all claims, liabilities and damages of any kind or nature which arise out of or are related to any such representations or warranties by Purchaser to its customers.

The pass-through Limited Warranty does not apply if the returned Product has been damaged by negligence by persons other than tekmar, accident, fire, Act of God, abuse or misuse; or has been damaged by modifications, alterations or attachments made subsequent to purchase which have not been authorized by tekmar; or if the Product was not installed in compliance with tekmar's instructions and/or the local codes and ordinances; or if due to defective installation of the Product; or if the Product was not used in compliance with tekmar's instructions.

THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, WHICH THE GOVERNING LAW ALLOWS PARTIES TO CONTRACTUALLY EXCLUDE, INCLUDING, WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, DURABILITY OR DESCRIPTION OF THE PRODUCT, ITS NON-INFRINGEMENT OF ANY RELEVANT PATENTS OR TRADEMARKS, AND ITS COMPLIANCE WITH OR NON-VIOLATION OF ANY APPLICABLE ENVIRONMENTAL, HEALTH OR SAFETY LEGISLATION; THE TERM OF ANY OTHER WARRANTY NOT HEREBY CONTRACTUALLY EXCLUDED IS LIMITED SUCH THAT IT SHALL NOT EXTEND BEYOND TWENTY-FOUR (24) MONTHS FROM THE PRODUCTION DATE, TO THE EXTENT THAT SUCH LIMITATION IS ALLOWED BY THE GOVERNING LAW.

**Product Warranty Return Procedure** All Products that are believed to have defects in workmanship or materials must be returned, together with a written description of the defect, to the tekmar Representative assigned to the territory in which such Product is located. If tekmar receives an inquiry from someone other than a tekmar Representative, including an inquiry from Purchaser (if not a tekmar Representative) or Purchaser's customers, regarding a potential warranty claim, tekmar's sole obligation shall be to provide the address and other contact information regarding the appropriate Representative.

## PRODUCT SPECIFICATION SHEET

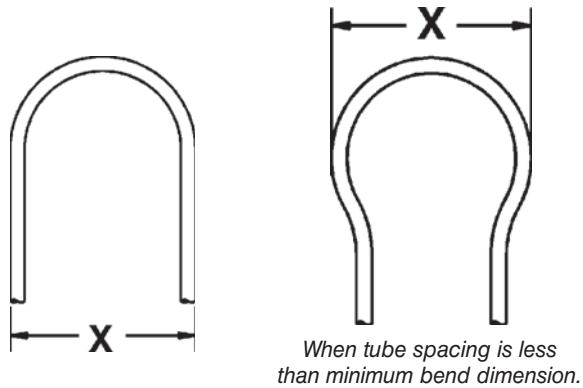

### ViegaPEX Barrier

#### Quality Assurance

ViegaPEX Barrier tubing is manufactured and tested to the requirements of ASTM F876 and F877. The degree of cross-linking of finished tubing is determined by method ASTM D2765.

#### Certifications

**NSF-pw** - tested for health effects to ANSI/NSF 61 and performance to ANSI/NSF standard 14.

When the tube spacing is less than the minimum recommended bending dimension, the loop ends should be swept out to at least the dimensions shown.

Otherwise, if tube spacing is equal or greater than "X", a standard loop may be used.

Dimension X Tubing Size With the Coil	
5/16"	7"
3/8"	8"
1/2"	10"
5/8"	12"
3/4"	14"
1"	18"
1-1/4"	22"
1-1/2"	26"

ViegaPEX Barrier Oxygen Permeation:  
All sizes have less than 0.1 grams/m<sup>3</sup>/day

Note: ViegaPEX Barrier tubing meets DIN 4726 requirement for oxygen tight pipes.

#### PRESSURE DROP TABLE Expressed per/ft.

	Garages and Workshops, Interior Zones of Large Commercial Buildings or Warehouses	12"	½", ⅝", or ¾"
Dry Mass	Above Sub-Floor Panels	7" – 10"	⅝"
	Below Sub-Floor (Residential Only)	8"	⅜" or ½"
	Wall Panels	7" – 10"	⅝"

Table 1-5. Typical spacing and nominal tubing size, by application.

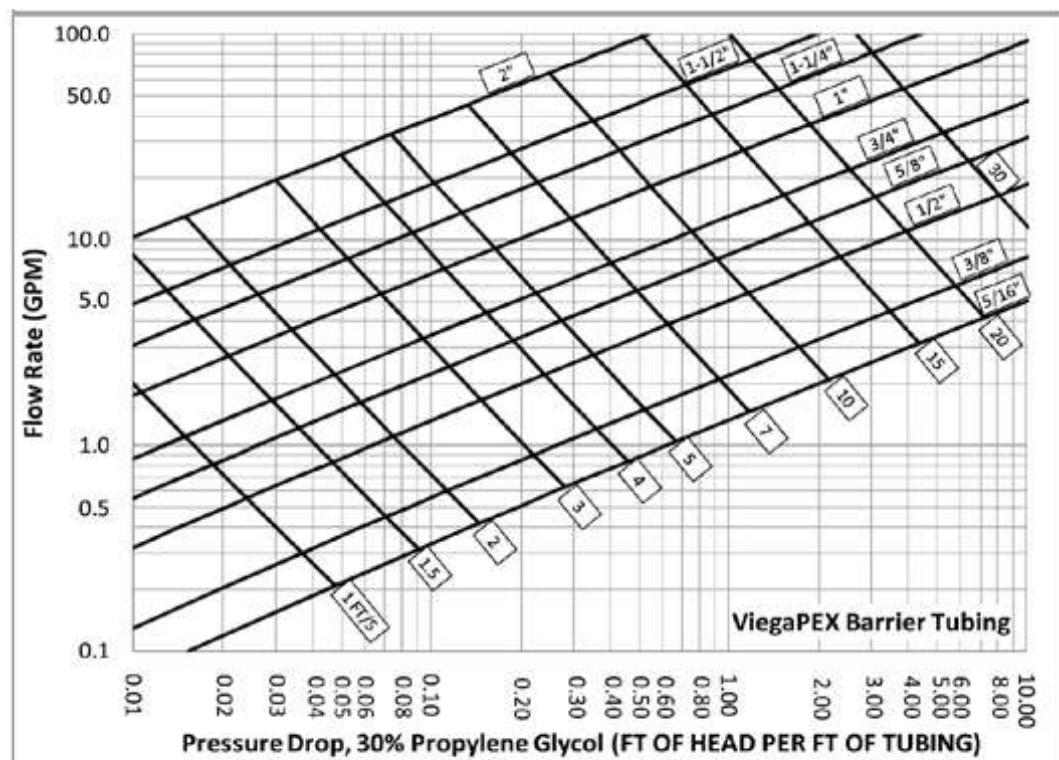

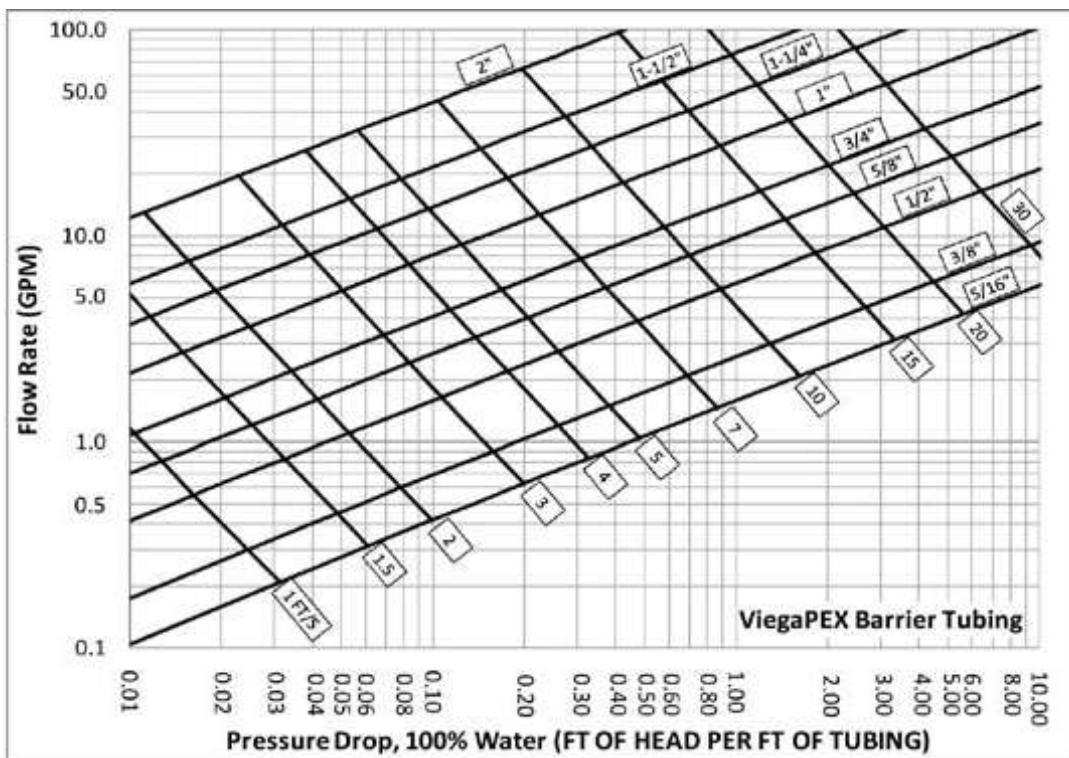

\*Used more commonly in commercial applications.

Tubing	≤ 25 Btu/hr/ft <sup>2</sup>	>25 Btu/hr/ft <sup>2</sup>
⅝"	250	200
⅜"	300	250
½"	400	350
⅝"	500	450
¾"	800	750

Table 1-6. Maximum recommended circuit lengths in feet, assuming a temperature drop of ≥ 20°F, 100% water, and air temperature of 68°F.

This is for Radiant Applications only, not snowmelt!

## Pressure Drop

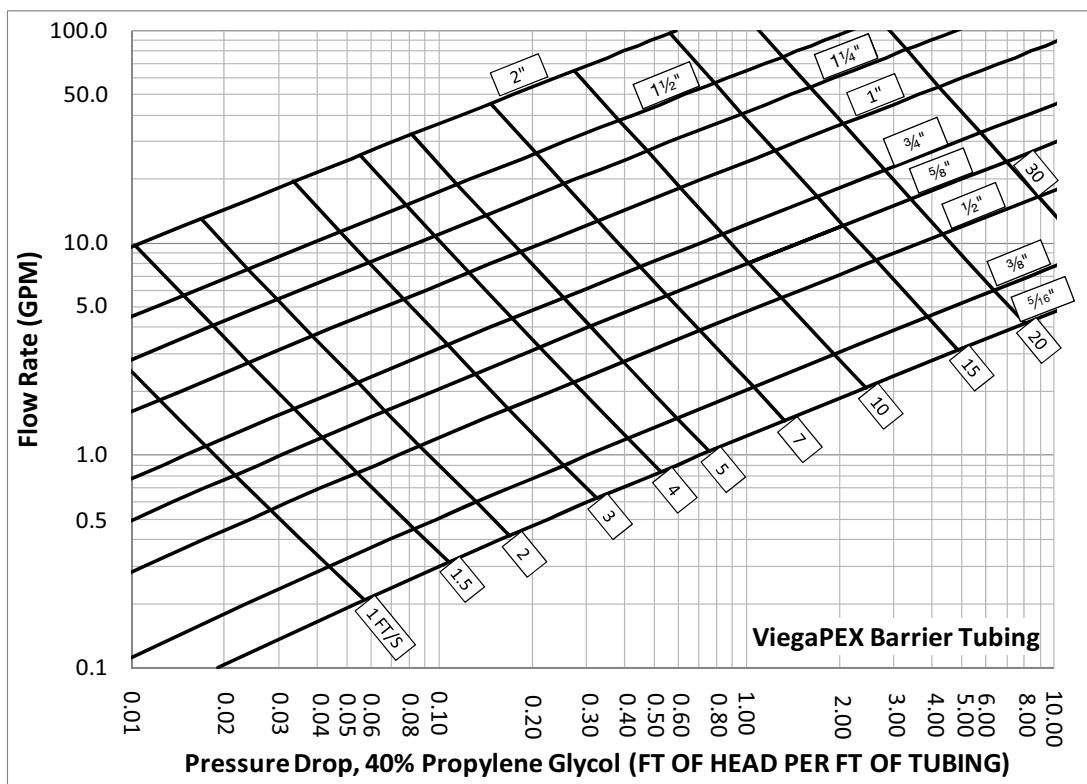

Table 1-17. Forty percent propylene glycol pressure drop table for ViegaPEX Barrier tubing.

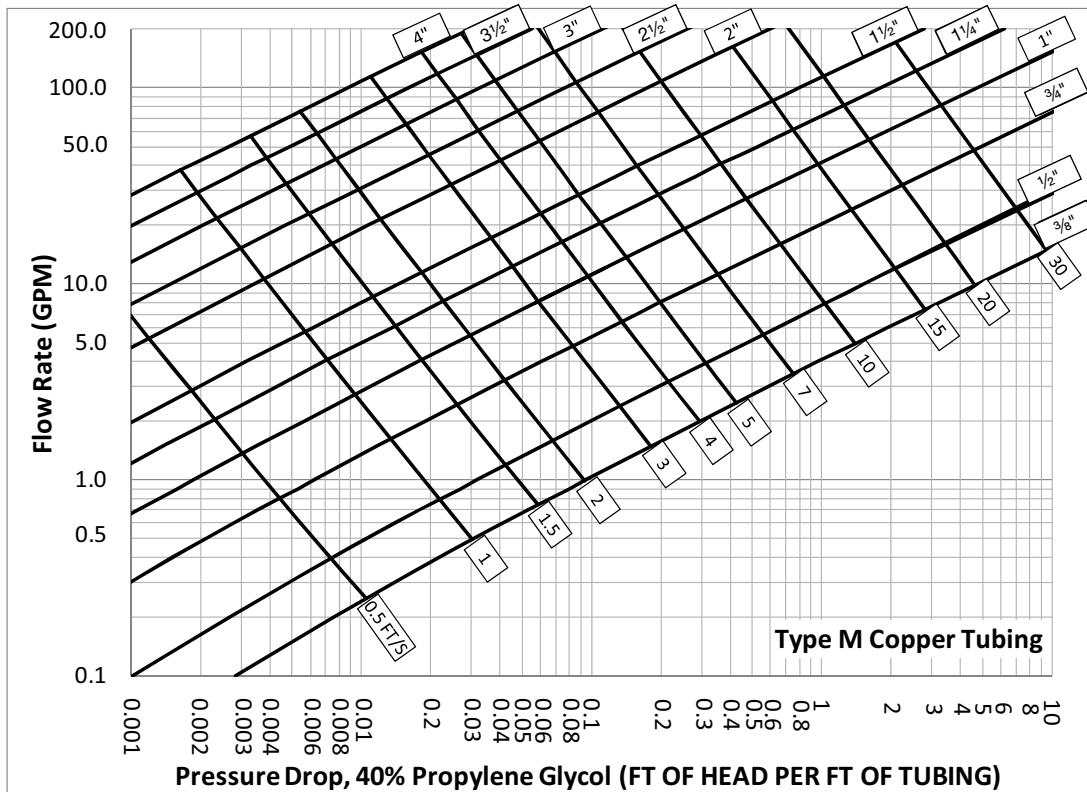

Table 1-18. Forty percent propylene glycol pressure drop table for Type M copper tubing.

## SYSTEM DESIGN - CHAPTER 3

### 3.3 Calculating the Tube Spacing:

Decreasing the tube spacing will allow the snow melting system to operate at lower fluid temperatures while meeting the heat output requirements. Use table 3.3 to the right to calculate the proper tube spacing.

Procedure:

1. Find the tube size in the first column.
2. Follow to the right and read the recommended tube spacing under the column representing the heat load.

Example:

Tube size: 5/8"

Snow melting load: 200 Btu/h\*ft

Recommended tube spacing: 9"

Tube Size	Max. Circuit Length	Recommended Tube Spacing in Concrete				
		Snow Melting Load (Btu/h*ft <sup>2</sup> )				
100	150	200	250	300		
1/2"	150 ft	9"	9"	6"	6"	6"
5/8"	250 ft	9"	9"	9"	6"	6"
3/4"	400 ft	12"	12"	9"	9"	6"

Table 3.3

Notes:

- Space tubing 1 inch closer for each inch of concrete cover over 2 inches.
- Space tubing 2 inches closer for each additional inch of pavers > 2-3/8" pavers.
- Space tubing 1 inch closer for asphalt applications.

### 3.4 Calculating the Fluid Supply Temperature:

Use table 3.4 to calculate the fluid (antifreeze solution) supply temperature.

Procedure:

1. Find the snow melting load in the first column.
2. Follow to the right and read the recommended fluid supply temperature under the column representing the selected tube spacing.

Example:

Snow melting load: 200 Btu/h\*ft

Tube spacing: 9 inches

Fluid supply temperature: 131°F

Snow Melting Load (Btu/h*ft <sup>2</sup> )	Fluid Supply Temperature (°F)*		
	6	9	12
100	100	100	103
150	100	106	128
200	108	131	153
250	133	156	
300	158		

Table 3.4

\* Based on a 30 F° temperature drop

Note:

Fluid supply temperature of 130°F is typical for snow melting applications.

## SYSTEM DESIGN - CHAPTER 3

### 3.6 Water/ Glycol Mixture:

#### Selecting the percentage of Glycol Mixture:

Freeze protection is essential to the snow melting system. For typical applications, Viega recommends using 40% Propylene Glycol. Ethylene Glycol is accepted. Use the table to determine the freezing point of the water/ glycol mixture based on % glycol by volume.

Glycol Mixture	Freezing Point (°F)	
	Ethylene Glycol	Propylene Glycol
30%	3.7	8.4
40%	-12.6	-6.7
50%	-35.0	-30.0

#### Note:

Automotive antifreeze is not recommended; the silicates in automotive antifreeze can coat and foul heat transfer surfaces and plug the system, reducing energy efficiency.

Table 3.6A

#### Glycol effects on the system:

The material properties change according to the % glycol mixture. Use the table to adjust the flow rate and pressure drop calculated through the tubing (refer to 3.7 and 3.8 for values).

#### Procedure:

1. Use the table to find the % increase multiplier (based on the % glycol mixture).
2. Multiply the flow rate and pressure drop figures by the multiplier.

Glycol Effects on the System		
Glycol Mixture	Flow Rate % Increase Multiplier	Pressure Drop % Increase Multiplier
30%	5% (1.05)	20% (1.20)
40%	8.5% (1.085)	25% (1.25)
50%	12.5% (1.125)	31% (1.31)

Table 3.6B

#### Example:

Glycol mixture: 40%

Calculated flow rate: 7 gpm

Flow rate multiplier: 8.5% (1.085)

Adjusted flow rate calculation:

$$7 \text{ gpm} \times 1.085 = 7.6 \text{ gpm}$$

Calculated pressure drop: 20 ft of hd

Pressure drop multiplier: 25% (1.25)

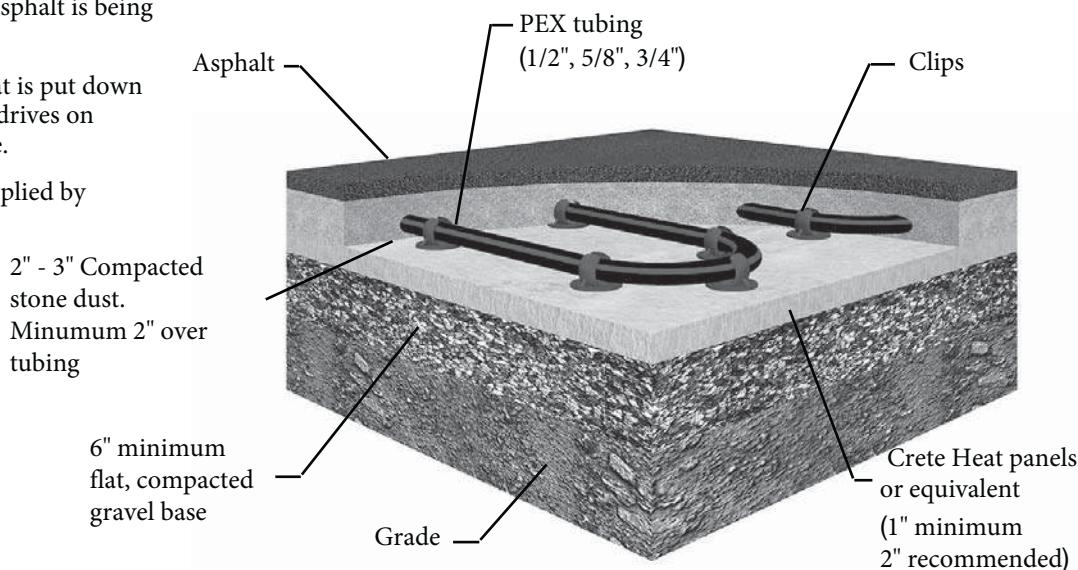

Adjusted pressure drop calculation:

$$20 \text{ ft of hd} \times 1.25 = 25 \text{ ft of hd}$$

## SNOW MELT INSTALLATION EXAMPLES

### Section through Asphalt over compacted stone dust bed with insulation

- Pressurize PEX tubing with water and bleed some off while asphalt is being applied.
- Make sure binder coat is put down by hand so no equipment drives on compacted stone dust base.
- Finish Coat can be applied by machine.

- Place Sensor where snow will last the longest to prevent premature shut down of system. Sensor should be placed equal distance between tubing.

- Gravel base must be flat and compacted to prevent movement of rigid insulation.

- Tube size and spacing determined by application. Review your design criteria with Capco before proceeding.

### Section through Pavers over Asphalt

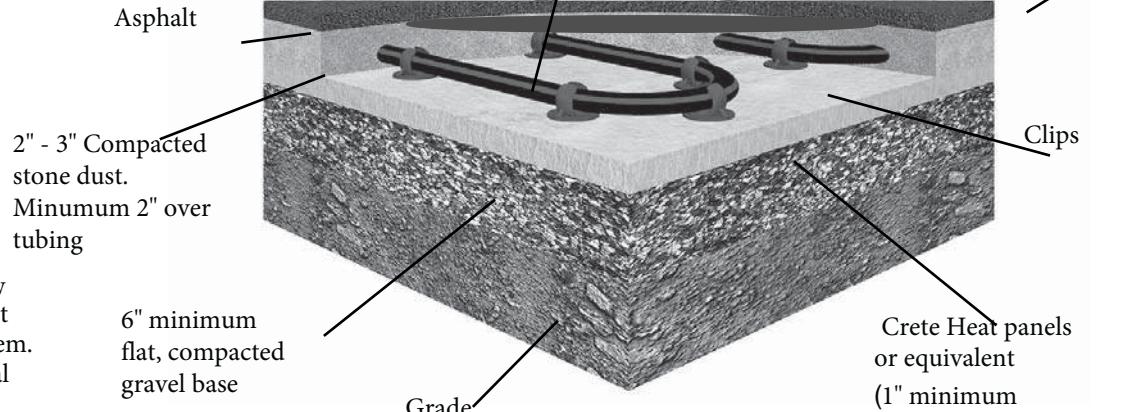

- Pressurize PEX tubing with water and bleed some off while asphalt is being applied.

- Make sure binder coat is put down by hand so no equipment drives on compacted stone dust base.

- Finish Coat can be applied by machine.

- Pavers require a fixed boarder on all sides so that the pavers cannot spread in any direction. This fixed boarder should be repeated on inclines.

- Place Sensor where snow will last the longest to prevent premature shut down of system. Sensor should be placed equal distance between tubing.

- Gravel base must be flat and compacted to prevent movement of rigid insulation.

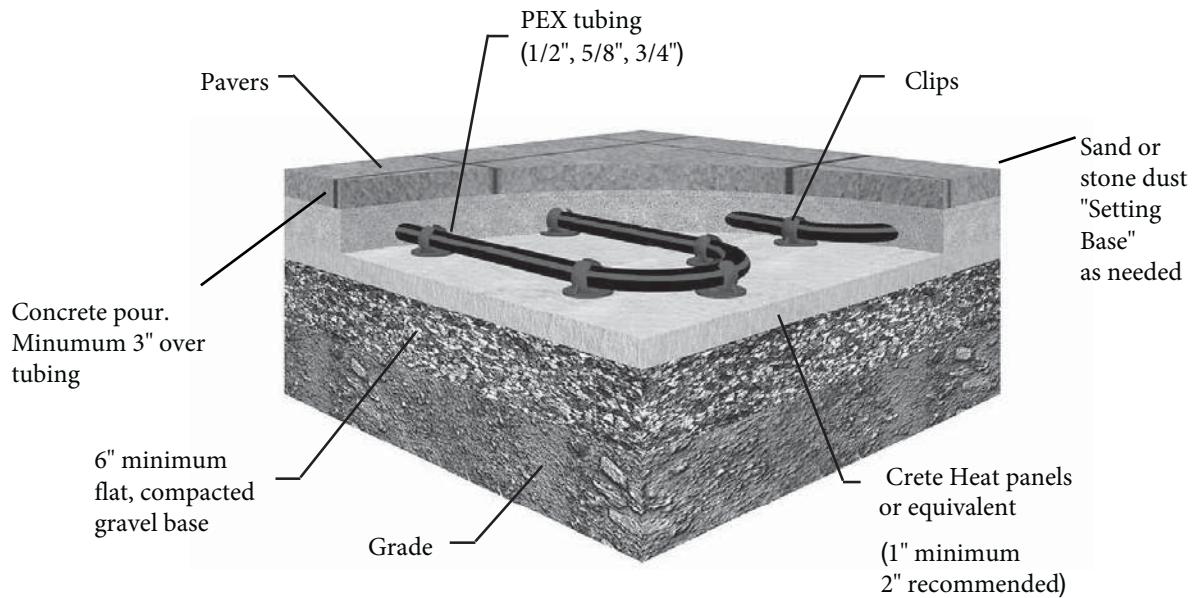

- Tube size and spacing determined by application. Review your design criteria with Capco before proceeding.

## SNOW MELT INSTALLATION EXAMPLES

### Section through Pavers over concrete with insulation

- Add a sand "setting base" on top of concrete if needed.

- Pavers require a fixed boarder on all sides so that the pavers cannot spread in any direction. This fixed boarder should be repeated on inclines.

- Place Sensor where snow will last the longest to prevent premature shut down of system. Sensor should be placed equal distance between tubing.

- Gravel base must be flat and compacted to prevent movement of rigid insulation.

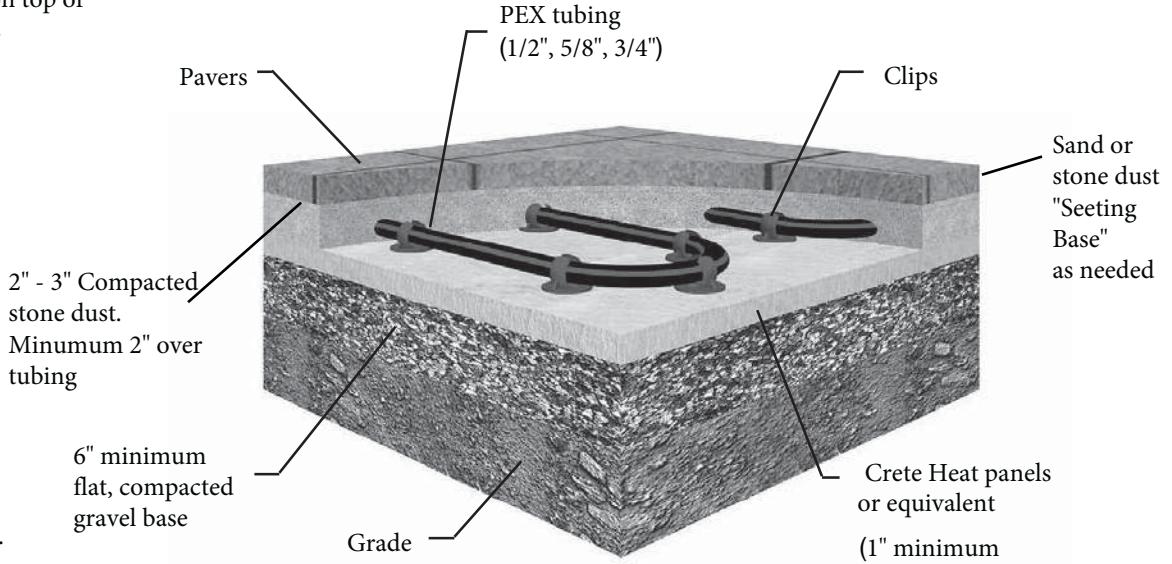

- Tube size and spacing determined by application. Review your design criteria with Capco before proceeding.

### Section through Pavers over compacted stone dust bed with insulation

- Add a sand "setting base" on top of compacted stone dust if needed.

- Pavers require a fixed boarder on all sides so that the pavers cannot spread in any direction. This fixed boarder should be repeated on inclines.

- Place Sensor where snow will last the longest to prevent premature shut down of system. Sensor should be placed equal distance between tubing.

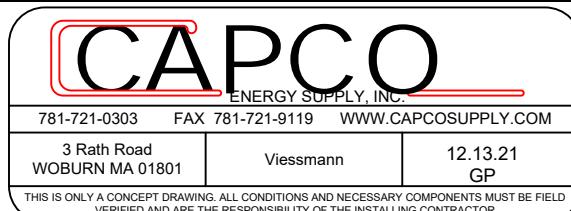

- Gravel base must be flat and compacted to prevent movement of rigid insulation.

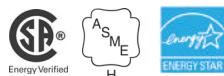

- Tube size and spacing determined by application. Review your design criteria with Capco before proceeding.

## QUICK STARTUP GUIDE

### WARNING

This guide does not replace the instruction and operating manual  
 Read the manual carefully before installing and using the product. Improper use of the product can cause personal injury and damage to property and may void the warranty.

#### Startup checklist

	<b>Operation</b>	<b>Pump Display</b>
1	Mount the pump in the system according to the flow direction indicated on pump housing and with motor housing in one of the allowed orientations shown in figure 1. Make sure the pump is aligned with the system piping.	-
2	Connect the pump to power supply. See figure 3 Make sure that the nameplate electrical ratings match the power supply.	-
3	Connect all the needed auxiliary input/output signal wires to the pump. See figure 3. Power and control wiring must be run in separate channels.	-
4	Fill the system and vent the air	-
5	Open all valves in the system to facilitate proper air venting	-
6	Power the pump and wait (refer to the advanced functions manual in case of errors and alarm codes on display)	The display and all the LEDs switch-on for 1 second and then a sequence of submenus for advanced functions will be shown.
7	Wait: (refer to the advanced functions manual in case of error and alarm code on display)	The display shows: 5DEG 4DEG 3DEG 2DEG 1DEG
8	Wait: (refer to the instruction manual and/or the advanced functions manual in case of error code on display or for excessive noise and any abnormality within the system)  In case of residual air inside the system creating noise or high vibration: 1. vent the system again 2. recall the automatic air venting procedure by pressing the up and down arrows on settings button ⑤ for 2 seconds (see fig. 2)	At the end of the air venting procedure, the pump starts to run with default settings
9	Set the control mode of the pump, by short pressing button ① (see figure 2).	On control panel, the chosen mode LED will switch-on:   <b>Constant pressure mode</b>  <b>Proportional pressure mode</b>  <b>Constant speed mode</b>  <b>Night setback mode</b>
10	Short press the button ⑤ (see figure 2) to display the actual setpoint	On display the actual setpoint starts to blink
11	Change values as desired with button ⑤ (see fig. 2)	On display the setpoint changes
12	Change values as desired with button ⑤ (see fig. 2)	The setpoint stops blinking on display and the previous parameter will be displayed
13	To change the displayed unit of measurement, press the button ③ (see fig. 2)	
14	To change the unit of measurement of head or flow, press the button ③ for more than 1sec. (see fig. 2)	<ul style="list-style-type: none"> <li>Flow: <math>m^3/h \leftrightarrow gpm</math> (US)</li> <li>Head: <math>m \leftrightarrow ft</math></li> </ul>
15	The user interface can be locked/unlocked by simultaneously pressing and holding the setting button ⑤ and the parameter button ③ for two seconds.  The user interface will be automatically locked after ten minutes of pressing the last button.	<p>By pressing any button when the user interface is locked, the display shows </p> <p>Unlocking the user interface the display shows: </p>

Fig. 1 – Allowed pump installation positions

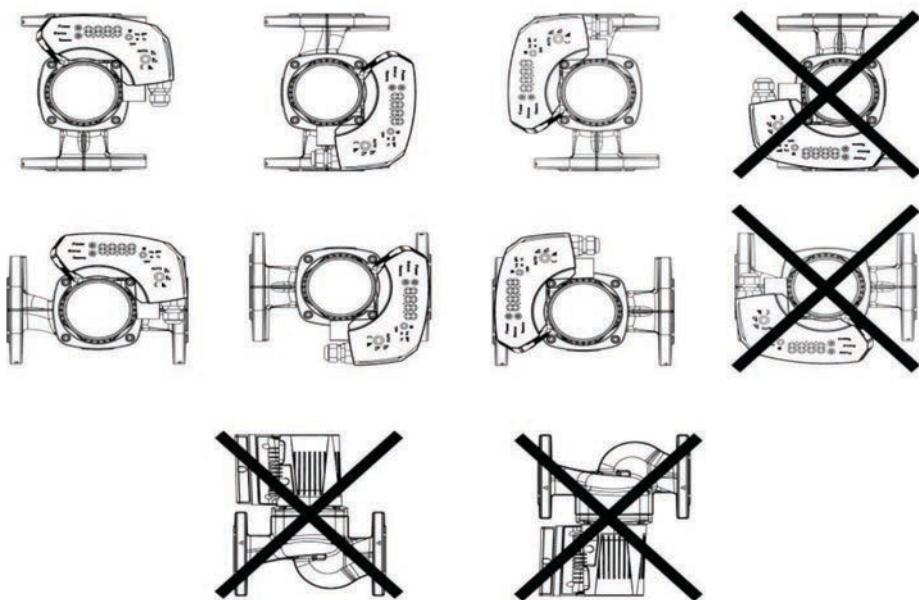

Fig. 2 – User interface description

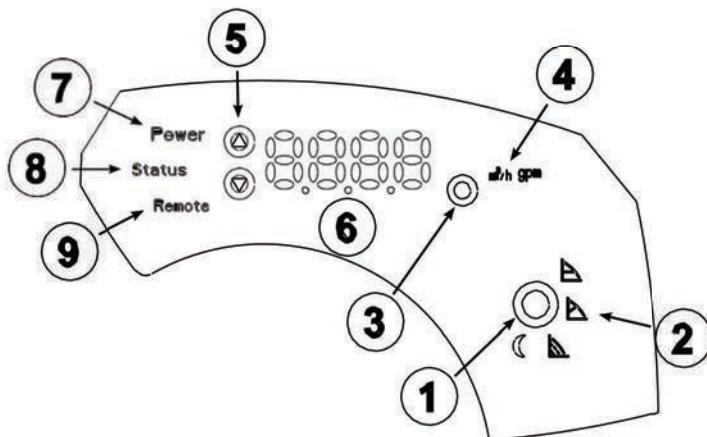

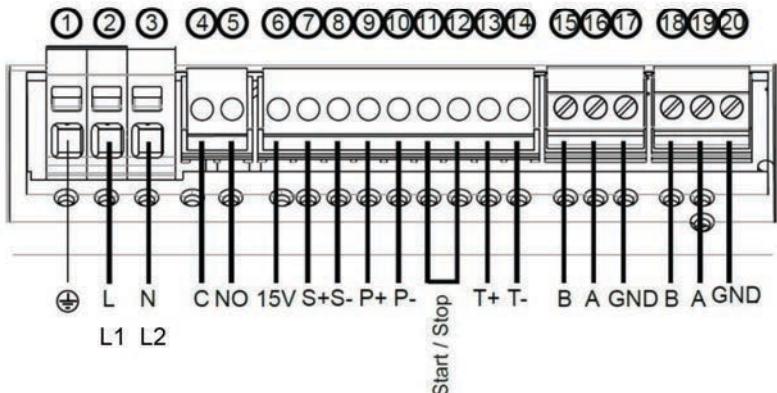

Fig. 3 – Terminal block description

Terminal No.	Description
1-2-3	Power Supply
4-5	Fault Signal dry contact (max 250VAC – 2A)
6	Auxiliary DC supply +15V (max 40 mA)
7-8	Analog input 0-10V DC
9-10	External pressure sensor input 4-20mA
11-12	Start/Stop input
13-14	External temperature probe input
15-16-17	Primary RS-485 channel
18-19-20	Secondary RS-485 channel

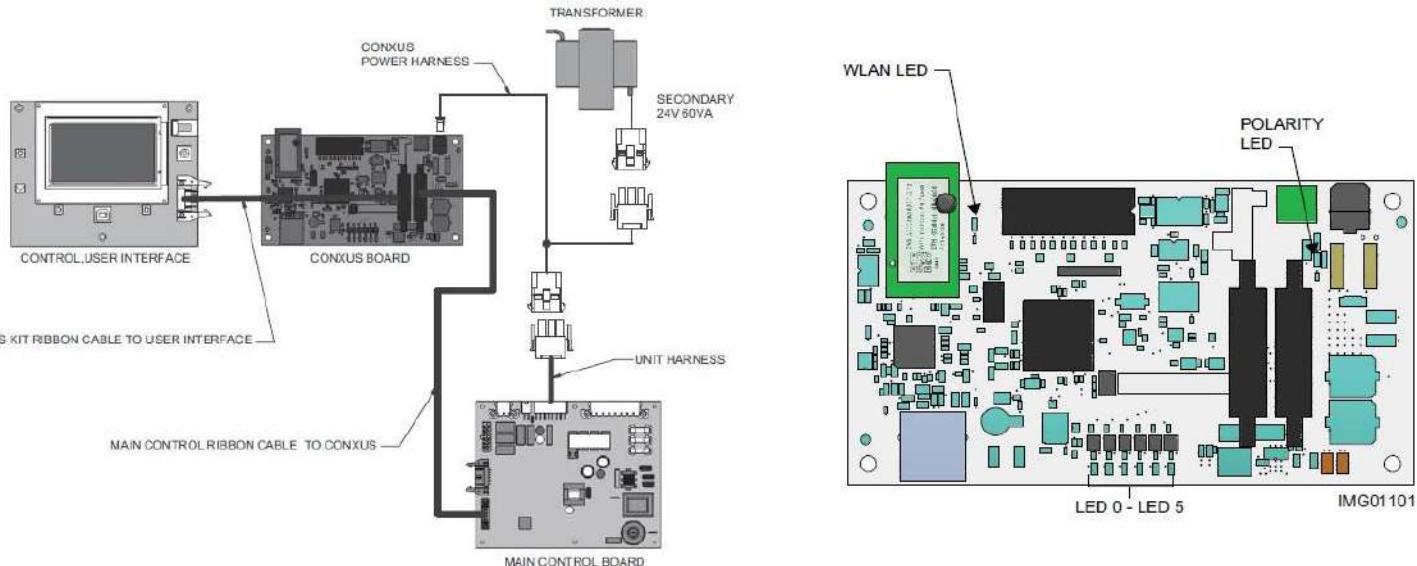

## Basic Setup Guide

### Installation

- 1) Remove user interface panel
- 2) Disconnect bracket from panel
- 3) Insert CON-X-US board to bracket, use retrofit board if manufactured prior to May 4, 2015 (serial number beginning "1915")
- 4) Connect CON-X-US Kit Ribbon Cable to User Interface, connect Main Control Ribbon Cable to CON-X-US, connect CON-X-US Power Harness to 24V transformer and Unit Harness

**Note:** Before reassembling, complete the connection, and log in step.

### Wi-Fi Connection

**Note:** Wi-Fi connection steps are not required if connected via wired internet connection (LAN)

- 1) Using a phone or tablet, open the list of Wi-Fi networks.
- 2) Select the network named "ConXus"
- 3) Within 10 seconds, you should be prompted to select the Wi-Fi network you would like the CON-X-US to pair to. If you are not asked to select a network, open Internet Explorer or Safari and enter 192.168.0.1 into the address bar. Now select the network you would like the CON-X-US to pair to.
- 4) LED #2 should now be lit—this confirms the Wi-Fi pairing was successful

### Log in to CONXUS app

- 1) Download the CONXUS app
- 2) Select "Create Account"
- 3) Confirm account via confirmation email – From Ayla Networks
- 4) Log in
- 5) Select "Register New Device"
- 6) Enter required information--if difficulty is found with the scan items, they may also be manually entered. When manually entering the DNS from the CON-X-US board, input the code after "DNS".

Your installation is now complete!

PHONE: (781) 938-8900 · FAX: (781) 933-3965

### **SHUT OFF BOILER**

Press Right Select Key

Confirm Shutdown "Yes" - Press Left Select Key

### **ACCESS INSTALLER MODE**

Hold Left Select Key until Password shows

Enter Installer Access Code (5309) using the Scroll Dial, pressing the Scroll to move to the next number

### **INSTALLER MODE**

Press Scroll Knob = SELECT

Turn Scroll Knob = ADJUST SETTING

EXIT = BACK

HOME = EXIT INSTALLER MODE (Do not select HOME until programming is complete)

**SETUP WIZARD**

The Setup Wizard is automatically accessed the first time the unit is powered up from the factory and will allow setting of certain parameters without the need to enter the installer password. Once the Setup Wizard is completed or canceled, it can only be accessed again by going through the Installer Menu.

**INSTALLER**

Press the ► button until the password menu appears. Use the ▲ and ▼ buttons to change the value of the first digit to 5, and then press ► to move to the next digit. Repeat this process to fill in the remaining digits and enter the password 5309. Once the final digit has been entered, press the ► button.

**BUTTON FUNCTIONS**

- ▲/▼ - Change value of current parameter.
- - Move to the next parameter.
- ◀ - Save changes and exit the menu.

# COMBUSTION ANALYSIS PROCEDURE

Model: \_\_\_\_\_

Contractor: \_\_\_\_\_

Serial: \_\_\_\_\_

Location: \_\_\_\_\_

Take 2 gas pressure readings Static (boiler off) Dynamic (boiler running)

Static \_\_\_\_\_ Natural (4-14") LP (8-14")

Dynamic \_\_\_\_\_ drop no larger than 1-2" at ignition

Run boiler to high fire and record the CO2 and CO

CO2 \_\_\_\_\_ 8-10% natural 9-11% LP

CO \_\_\_\_\_ lower the better never more than 150PPM

Run boiler to low fire and record the CO2 and CO

CO2 \_\_\_\_\_ 8-10% natural 9-11% LP

CO \_\_\_\_\_ lower the better never more than 150PPM

Adjust the high fire combustion to your desired CO2, then adjust your low fire combustion to a CO2 that is close to but lower than high fire.

Example:

High fire CO2 9.3%

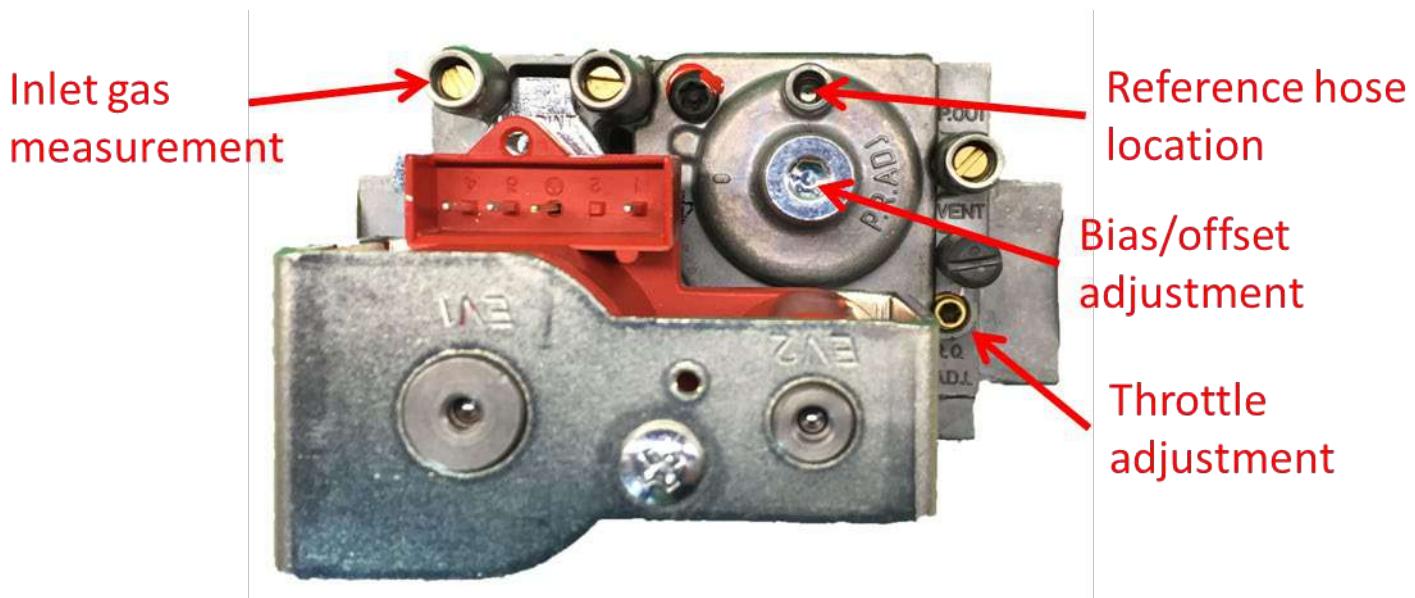

Low Fire CO2 9.1%

Once completed cycle the boiler up and down a few times and recheck your combustion at high and low and watch how it changes during ramping watch your analyzer to be sure the combustion never drops out of range.

## KH/WH/NK 10:1 procedure

Sweet spot for these is low to mid 9's on natural and mid 10's on LP, if they can't get there that's okay as long as operation is smooth and light off is quiet. In these the light off should be very quiet, listen for shuddering or a stutter if so you may need to ricken the boiler up, Ideally the high and low fire will be near each other with the low fire slightly below.

### Adjustment

High Fire use 2.5mm allen wrench to turn throttle counterclockwise to increase and clockwise to decrease.

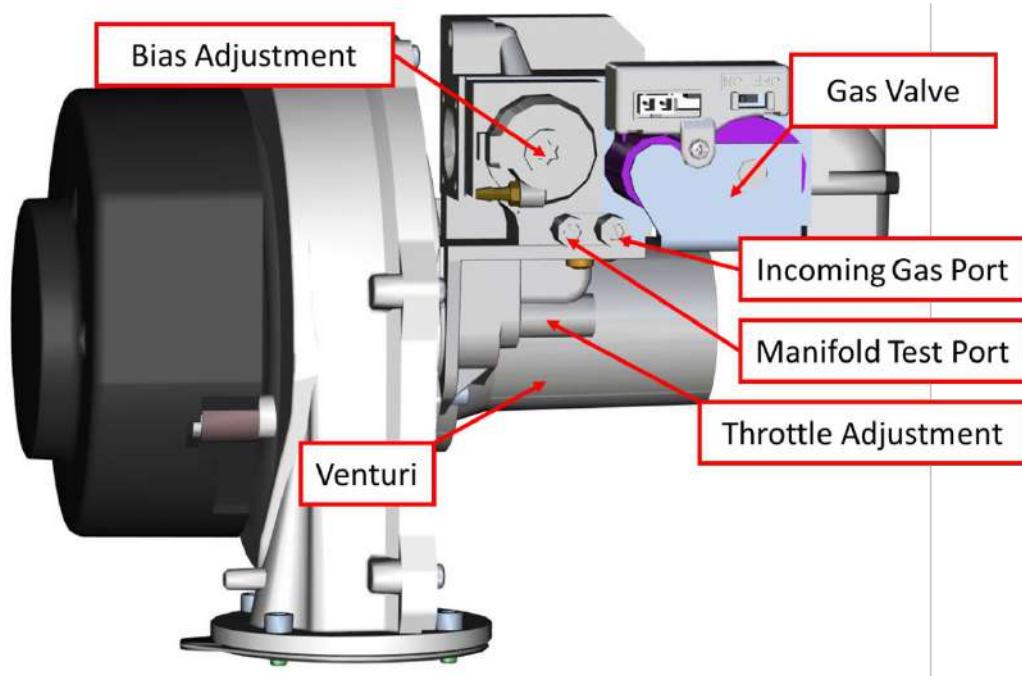

Low Fire use 4mm allen wrench to turn bias clockwise to increase and counterclockwise to decrease.

The low fire adjustment tends to respond slowly so take your time, let the boiler run for a minute or two.

***NOTE WHEN SETTING COMBUSTION WITH THIS GAS VALVE  
START WITH A LOW FIRE COMBUSTION.***

## KB/WH/WB 5:1 procedure

Sweet spot for these is mid 8's to low 9's on natural and high 9's to mid-10's on LP, if they can't get there that's okay as long as operation is smooth and light off is quiet. Ideally the high and low fire will be near each other with the low fire slightly below.

### Adjustment

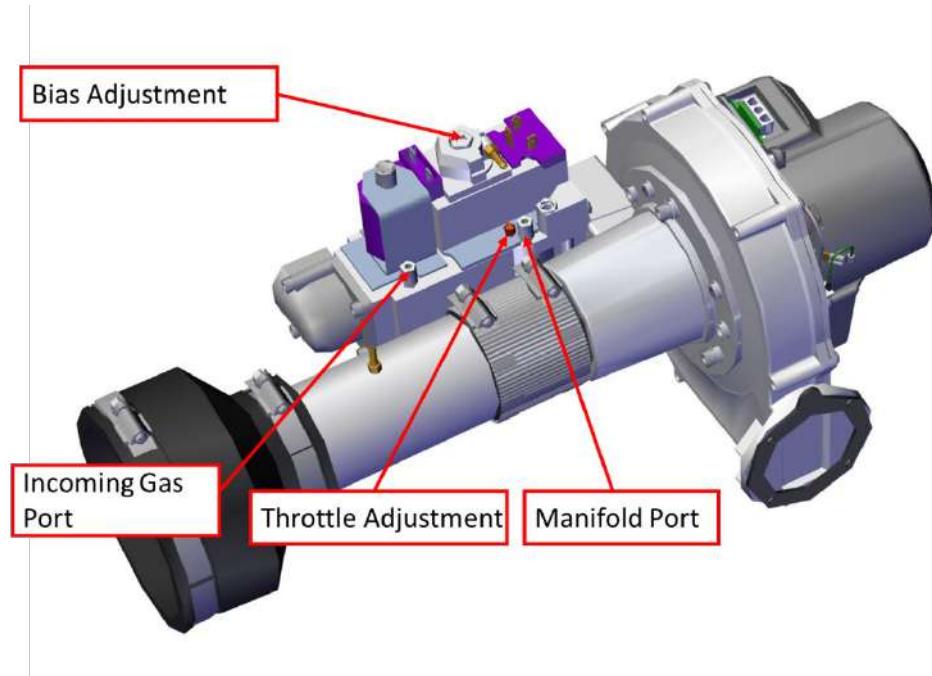

High Fire use 4mm allen wrench to turn throttle counterclockwise to increase and clockwise to decrease.

Low Fire use T40 torx drive to turn bias clockwise to increase and counterclockwise to decrease.

The low fire adjustment tends to respond quickly so be gentle and take your time.

## KBX/AWN/FTX/WH400 procedure

Sweet spot for these is mid 8's to 9's on natural and high 9's to mid-10's on LP, if they can't get there that's okay as long as operation is smooth and light off is quiet. Ideally the high and low fire will be near each other with the low fire slightly below.

### Adjustment

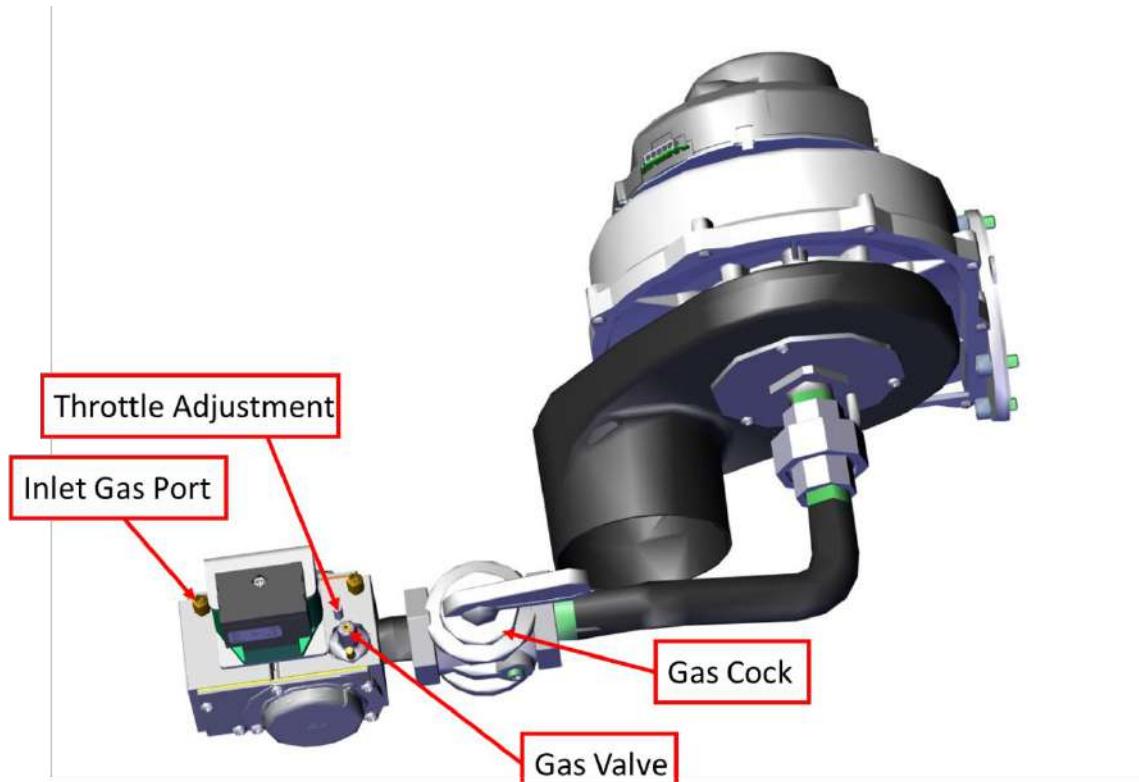

High Fire use small screw driver to turn throttle counterclockwise to increase and clockwise to decrease.

Low Fire use T40 torx drive to turn bias clockwise to increase and counterclockwise to decrease.

The high fire adjustment is a C-cup and tends to respond quickly so be gentle so take your time.

## KBX/AWN/FTX/WH 500/501 SBN1000 procedure

Sweet spot for these is mid 8's to 9's on natural and high 9's to mid-10's on LP, if they can't get there that's okay as long as operation is smooth and light off is quiet. Ideally the high and low fire will be near each other with the low fire slightly below.

### Adjustment

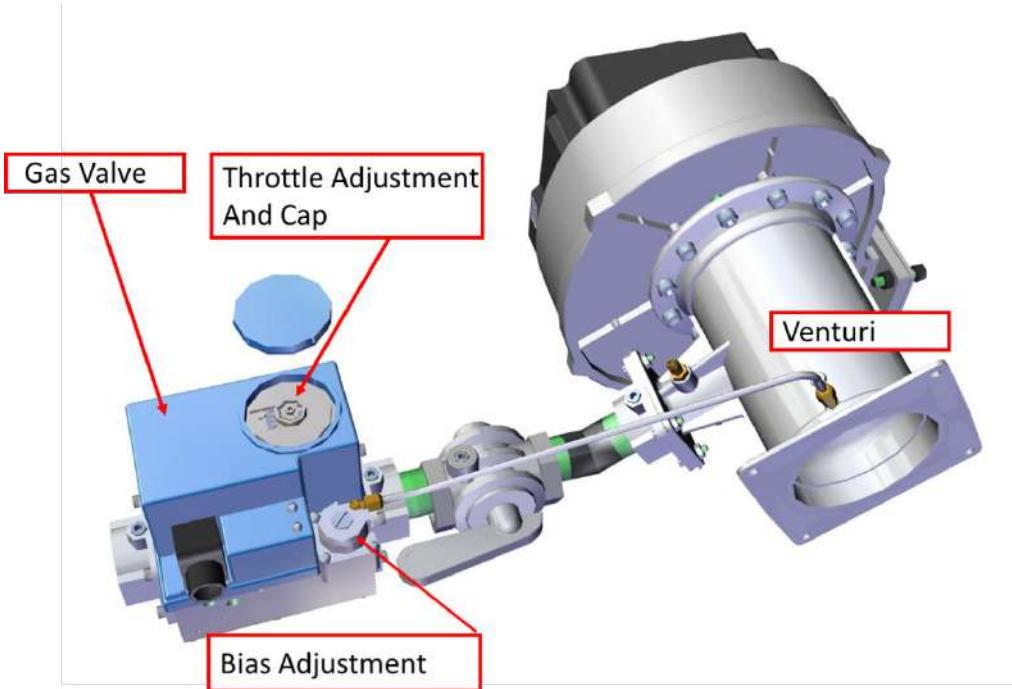

High Fire use small screw driver to turn throttle counterclockwise to increase and clockwise to decrease.

Low Fire use T40 torx drive to turn bias clockwise to increase and counterclockwise to decrease.

This gas valve tends to respond slowly initially and then will take off quickly so take your time.

## KBX/AWN/FTX/600/850 SBN1300/1500 procedure

Sweet spot for these is mid 8's to 9's on natural and high 9's to mid-10's on LP, if they can't get there that's okay as long as operation is smooth and light off is quiet. Ideally the high and low fire will be near each other with the low fire slightly below.

### Adjustment

High Fire use 3mm allen wrench to turn throttle counterclockwise to increase and clockwise to decrease.

Low Fire use T40 torx drive to turn bias clockwise to increase and counterclockwise to decrease.

This valve operates across a wide range of firing rates so we want to be cautious when adjusting that we don't over fire the boiler, evidence of over firing can be elevated CO<sub>2</sub> and CO levels.

## User Interface - Indicator LED

### Power

- On when 115 V (ac) is applied.
- Off when power disconnected or transformer fuse is blown.

### Priority

- On when zone 1 has priority over zones 2 to 6.

### RoomResponse™

- On when modulating condensing boiler is operating below maximum setting.

### Zone 1

- On when thermostat 1 calls for heat.

### Zones 2 to 6

- On when the corresponding thermostat calls for heat.
- Off during priority operation.
- Off when corresponding thermostat stops calling for heat.

## Sequence of Operation

### Zone Operation

When a thermostat calls for heat by closing the R and W terminals:

- 115 V (ac) is applied to the corresponding circulator pump.
- The corresponding zone indicator LED is turned on.

### Boiler Operation

When a thermostat calls for heat by closing the R and W terminals:

- The boiler end switch XX is closed to fire the boiler.
- The RoomResponse™ 0-10 V (dc) or 4-20 mA signal is sent to a modulating-condensing boiler.

### DHW Operation

Many modulating-condensing boilers have multiple temperature call inputs. Wire the DHW end switch to input recommended in the boiler's manual.

When a zone 1 calls for heat by closing the R and W terminals:

- The DHW end switch is closed to fire the boiler at the DHW temperature.
- The Mod Boiler output is changed to 10 V (dc) or 20 mA.

### Master / Member DIP Switch

- Allows for unlimited expansion using additional Switching Relays and/or Zone Valve Controls.
- The Master Switching Relay is wired and operates the boiler.
- If using a single Switching Relay set to Master.
- When using multiple Switching Relays and/or Zone Valve Controls, set one control to Master and set all other controls to Member.

### T-Stat 1 Priority DIP Switch

When T-Stat 1 is calling for heat by closing the R and W terminals:

- 115 V (ac) is applied to the zone 1 circulator pump.
- Zone 1 indicator LED is turned on.
- Priority indicator LED is turned on.
- Zones 2 to 6 circulator pumps and LEDs are turned off.
- Expansion Member controls shut off their zones.
- After 60 minutes of continuous zone 1 call for DHW heating, zones 2 to 6 and all Expansion Member control zones are able to turn back on. This prevents building freeze up if the DHW tank aquastat fails in the closed position.

### Exercising DIP Switch

ON: Each circulator pump is energized for 30 seconds every 72 hours.

OFF: Circulator pump exercising disabled.

### Post Purge DIP Switch

ON: After the last thermostat stops calling for heat, the last circulator pump remains on for 2 minutes to purge heat from the boiler to the zone.

OFF: Post purge disabled.

### Mod Boiler DIP Switch

Select either 0-10 V (dc) or 4-20 mA signal to the modulating condensing boiler. Consult the boiler manual to determine the signal type. The DIP switch position does not matter if the modulating boiler output is not used.

### Fuses

- All fuses are T5A 250V slow blow.
- Fuses 1 to 6 correspond to the zone 1 to 6 circulator pump output. If a fuse is blown, first check that the pump is not seized and the wiring is not shorted. Then replace the fuse.
- Fuse 7 and 8 correspond to the 24 V (ac) transformer power supply. If a fuse is blown, first check that the thermostat wiring is not shorted. Then replace the fuse.

### Expansion Terminals

Connect the five wires of the expansion bus from the master to the member controls.

Terminal	Description
A/tN4	Away signal connecting tekmar thermostats
B	RoomResponse™ signal from member controls
C	Power common
D	Demand signal. 0 Vdc = demand. 2 Vdc = no demand
E	Priority signal. 0 Vdc = priority. 2 Vdc = no priority

# Tekmar 306P

## RoomResponse™ Signal

The RoomResponse™ signal adjusts the temperature of a modulating condensing boiler that accepts a 0-10 V(dc) or 4-20 mA signal input. It works by continually adjusting boiler water temperatures to the lowest possible value to meet comfort without wasting energy. This is done by monitoring each thermostat's on and off time pattern and determines the ideal water temperature for each zone. The control then chooses the highest water temperature requirement of all the thermostats and provides a 0-10 V (dc) or 4-20 mA signal proportional to the boiler operating temperature. The RoomResponse™ signal is a DOE compliant method of controlling boiler temperature to building load. The RoomResponse™ signal is not available to on/off boilers.

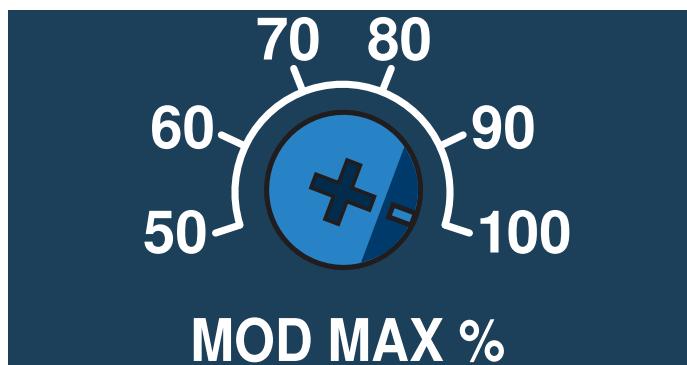

Benefits of the RoomResponse™ signal include:

- Increase in boiler efficiency
- Reduction in room temperature swing
- Reduction in expansion noises from heating pipes

## Mod Max % Dial

The upper limit of the 0-10 V (dc) or 4 -20 mA signal to the modulating condensing boiler can be set using the Mod Max % Dial.

This sets the upper temperature limit for the boiler.

Mod Max % dial set to 100% in the illustration.

The dial is only applicable to controls set as the Master.

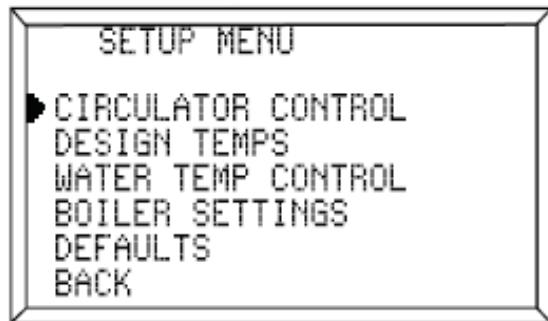

Mod Max %	Max Voltage	Max mA
50	5	12
60	6	13.6
70	7	15.2
80	8	16.8
90	9	18.4
100	10	20

## Setting the Max Mod % Dial

Boiler Make/Model	Required Adapter (Supplied by boiler manufacturer)	0-10 V (dc) / 4-20 mA DIP Switch	Mod Max % Dial for Boiler Design Temperature			
			120°F	140°F	160°F	180°F
Aerco AM series	Not required	0-10 V	50%	65%	80%	100%
Bosch Greenstar	ICM Module	0-10 V	55%	70%	80%	100%
Buderus GB142, GB162	EM10 Module	0-10 V	50%	60%	75%	90%
Burnham® Alpine™*	Not required	4-20 mA	50%	70%	85%	100%
Camus® Modulating Micoflame®	Not required	0-10 V	50%	60%	70%	85%
HTP Elite	Not required	0-10 V	50%	65%	80%	90%
IBC VFC and SL series*	Not required	0-10 V	65%	75%	85%	100%

Viessmann 100-W, WB1B	OpenTherm Module	0-10 V	55%	70%	85%	100%
Viessmann 200-W, B2HB and 300 CU3A	Not required	0-10 V	50%	60%	70%	80%
Weil-McLain® Evergreen*	Not required	0-10 V	50%	70%	85%	100%

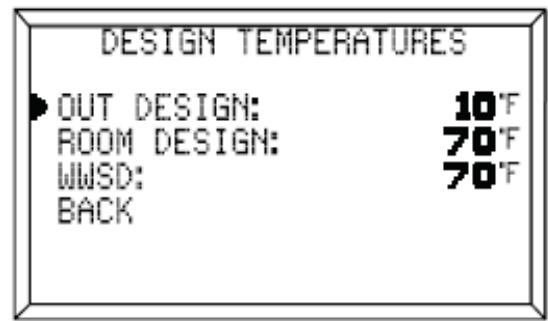

\* Requires changes to boiler's settings

# Hydronic Mixing Block Programming

**On/Off-** When using a thermostat

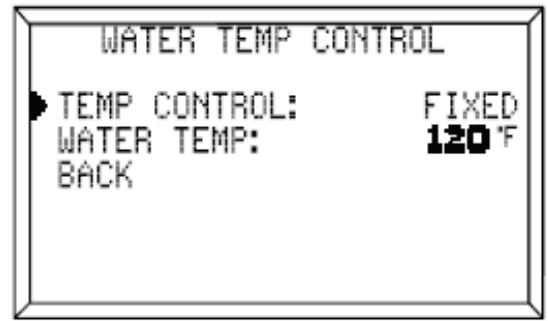

**Constant-** Circulator will run 24/7 and shut off during WWSD

**OUT DESIGN-** Coldest day in your area.

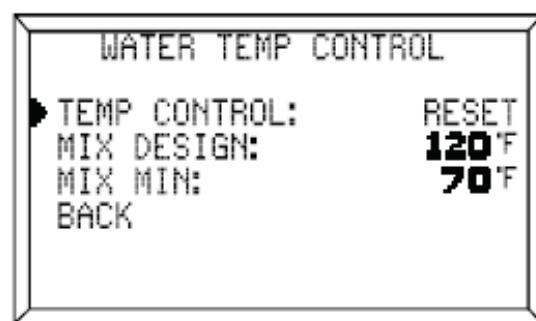

**ROOM DESIGN-** Desired indoor temp.

**WWSD-** Outdoor temp @ which control shuts down

**FIXED-** Constant Water temperature- no outdoor reset

**WATER TEMP-** Desired Water setpoint

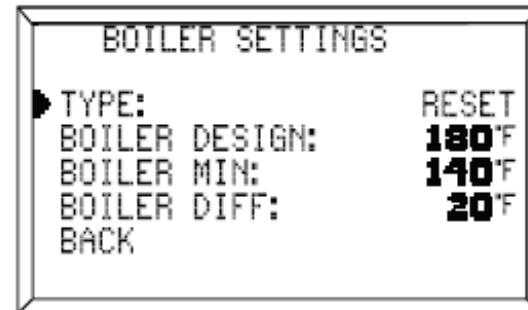

**RESET-** Mix Water temp adjusts based on outdoor temperature, as outdoor temp decreases water temp increases.

**MIX** Water temp on coldest day (set by OUT DESIGN).

**DESIGN-** 140 F staple up  
125 F climate panel  
100 F concrete slab

**MIX MIN-** Minimum water temperature in mix.  
OFF no floor minimum IF warm floor  
Always required:  
100 F staple up  
85 F climate panel  
75 F concrete

**RESET-** Boiler Water temp adjust based on outdoor temperature, as outdoor temp decreases water temp increases.

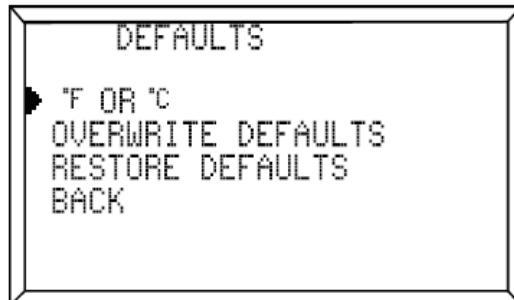

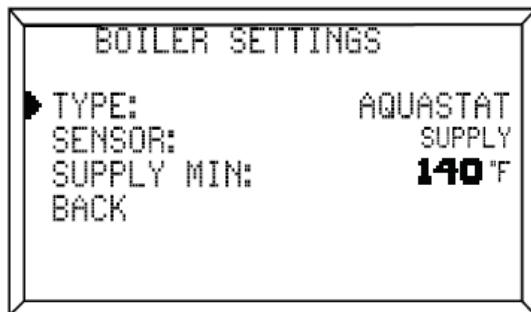

**BOILER DESIGN-** Boiler Water temp needed on Coldest day. Set at least 20 F above Mix Design setting above.

**BOILER MIN-** Lowest Water temp allowed at boiler.  
Condensing Boiler- set to off  
Non-Condensing set to 130-140 F

**BOILER MIN-** Set to 20, (10 above 10 below boiler target)

# Hydronic Mixing Block Programming

Cont.

**AQUASTAT-** Used for non-condensing boiler that maintains its own temperature.

**SENSOR-** On Supply or Return boiler pipe

**SUPPLY MIN RETURN MIN-** Boiler supply or return Minimum to protect from condensation Typical 140F Supply

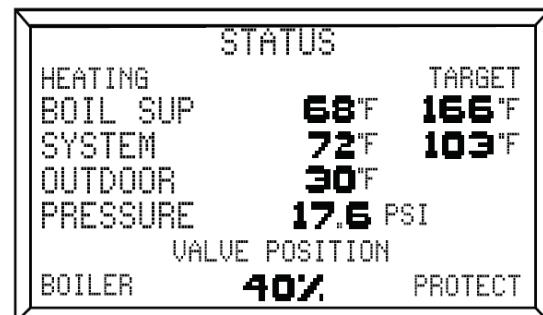

**NOTE-** When Boiler is below Minimum setting the mix valve will close resulting in No Heat until Minimum is met. PROTECT will show in status screen

**F or C-** Select Fahrenheit or Celcius

**OVERWRITE DEFAULTS-** Leave as is.

**RESTORE DEFAULTS-** Use to Restore to the defaults

**STATUS-** All Real Time Values can be read

**CONDENSING-** Set when boiler is condensing

Screen Color Indicator	Status
Light Blue/ Gray	No Heat Demand
Solid Red	Heat Demand, boiler running
Yellow/ Green	Heat Demand, boiler running but in boiler protection mode
Dark Blue	Heat Demand, boiler satisfied
Blinking Red	Failed boiler sensor or wire Control supplies 80F until error is resolved

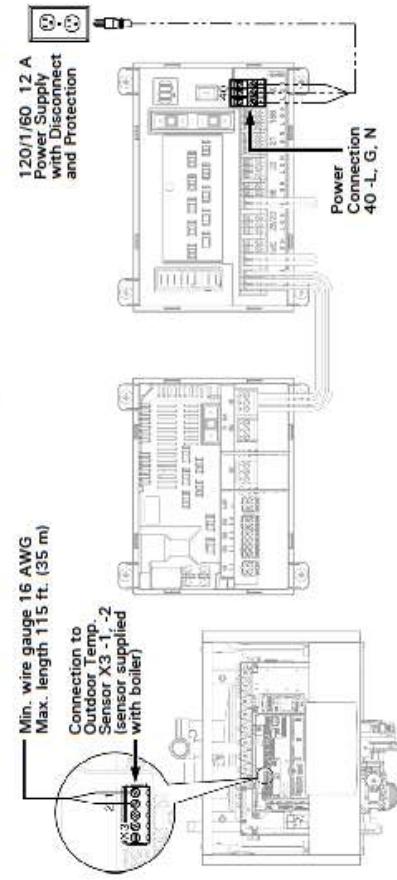

## VITOCROSSAL 300 CU3A CONNECTION QUICK START GUIDE

This Quick Start Guide is designed to provide an overview to an experienced licensed professional heating contractor with the a general wiring and operational knowledge of the Vitocrossal 300 CU3A boiler. It is NOT a substitute for the technical support literature supplied with the Vitocrossal 300 CU3A boiler and its accessories. The technical support literature of each product contains the necessary safety and industry/local code requirements which, if not followed exactly, will lead to property damages, personal injuries and/or loss of life. Viessmann Manufacturing assumes no responsibility for damage(s) of any kind caused by inappropriate use of this Quick Start-up Guide and/or failure to read the technical literature provided.

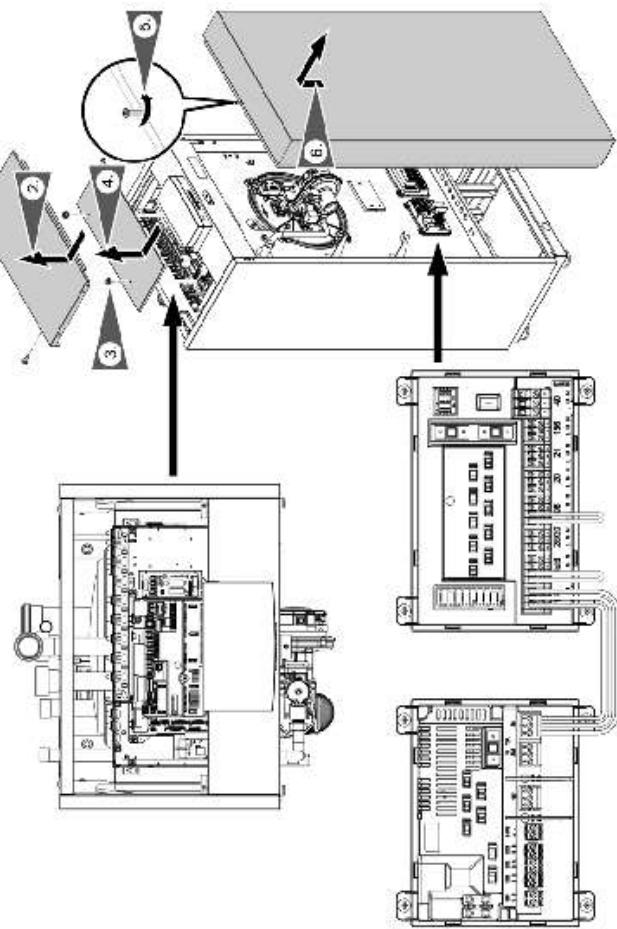

### Before wiring the boiler...

- Connect fuel supply and all hydronic piping.
  - Ensure gas pressure matches rating plate.
  - Verify that the venting is installed according to the Installation Instructions.
  - Perform leak tests on the gas supply, heating system and venting, using approved methods.
- What you need to know about wiring the boiler**
- For detailed installation information of the Vitocrossal 300 CU3A boiler refer to the appropriate documentation.
  - Refer to boiler wiring diagram for electrical requirements of boiler.
  - 120VAC wiring! The boiler can only be connected to a 120V/1/60 power supply.
  - Proper polarity must be maintained for 120VAC wiring.
  - The control unit requires an earth ground for proper operation.
  - Use shielded wire for sensor wiring to prevent electromagnetic interference.

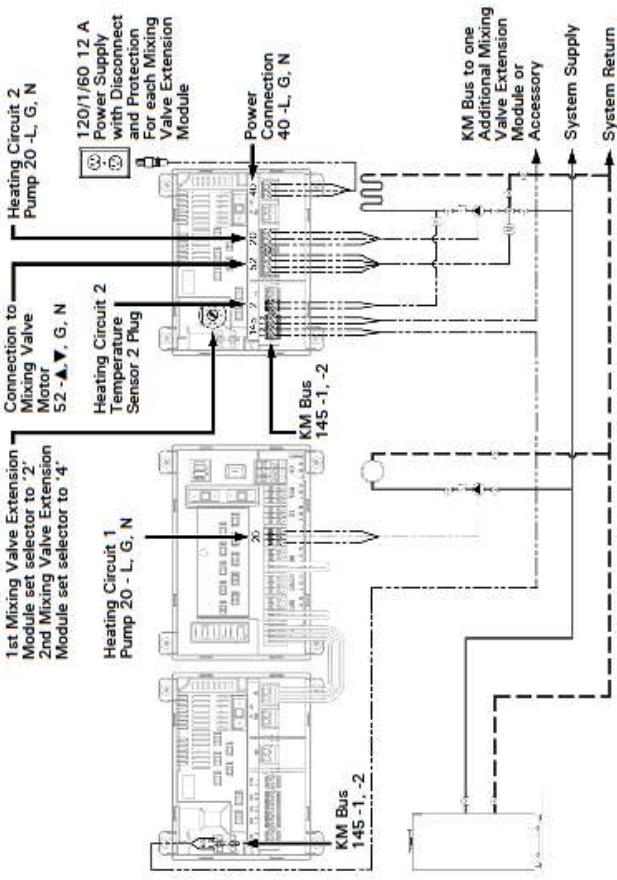

## ② Power and Sensor Connection

## ① Access to the CU3A Wiring

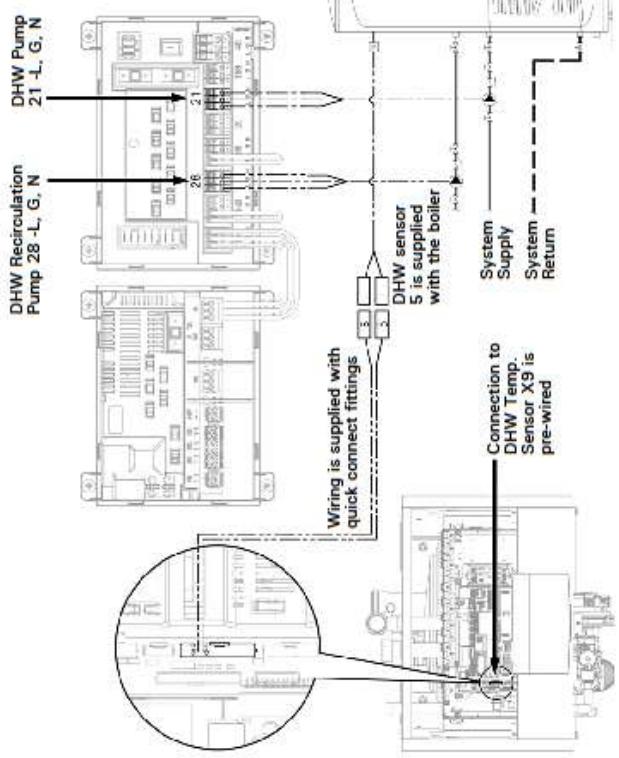

## ③ Heating Circuits Connection with mixing valve extension module (max. 2)

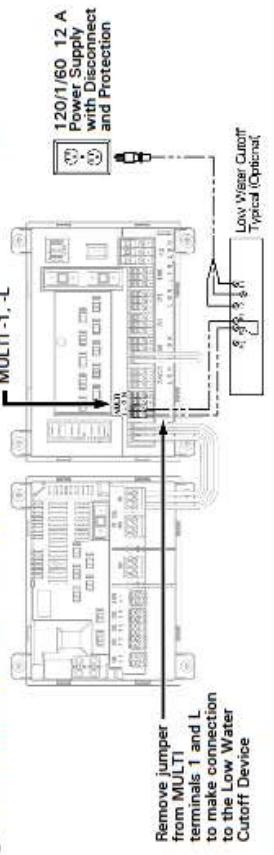

# VITOCROSSAL 300 CU3A CONNECTION QUICK START GUIDE

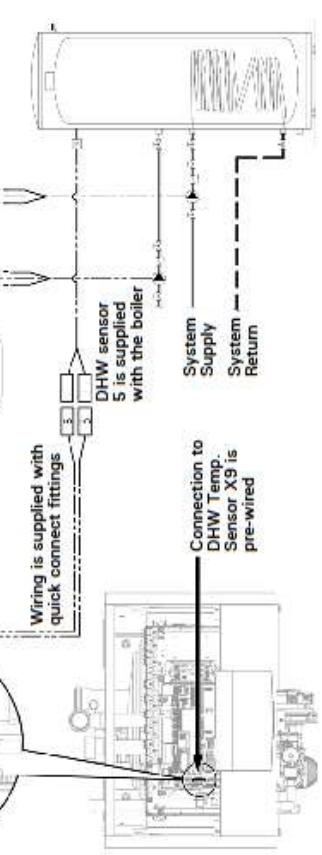

## ④ DHW Connection

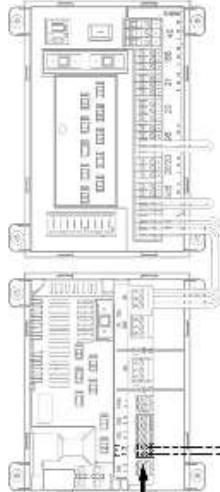

## ⑥ LWCO Connection

## ⑦ Starting the Boiler

## ⑤ External Heat Demand Connection

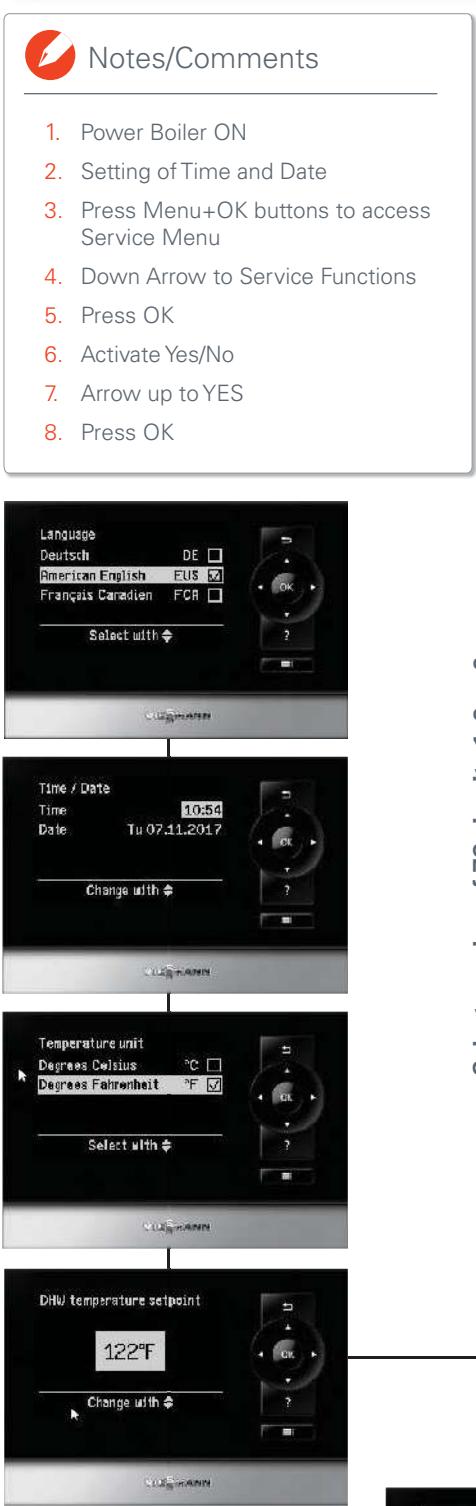

Note: See section ⑦ 'Starting the Boiler' under 'General' below for external heat demand required coding.

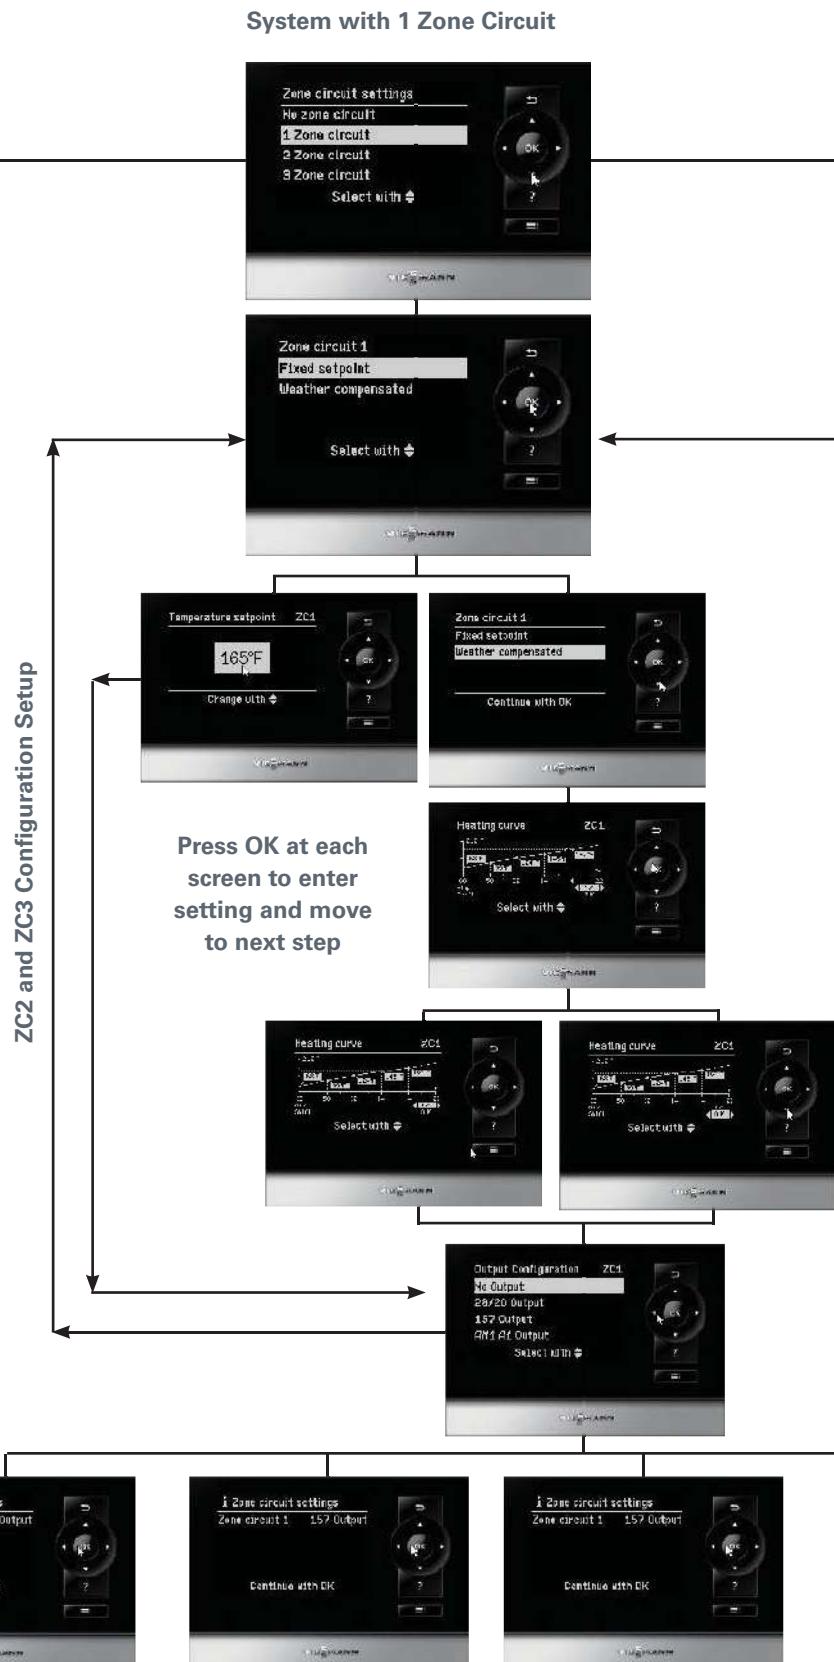

- Turn ON switch ④ (indicator ⑤ is on).
  - Using ▲▼, select 'Language' and press OK.
  - Using ▲▼, set 'Time and Date' and press OK.
  - Access coding level 2:
    - Simultaneously press OK and □ for 4 sec.
    - Using ▲▼, select desired coding group and press OK.
- General**
- Using ▲▼, select the system layout address 00: - and press OK.
  - Using ▲▼, select 'External Heat Demand (required coding if connected)
  - Using ▲▼, select address 3A:0 and press OK.
  - Using ▲▼, select coding 3A:2 and press OK.
  - Using ▲▼, select address BB:0 and press OK.
  - Using ▲▼, select address 9B: - (for set point temp.) and press OK.
- For changing to LPG, refer to the fuel conversion instructions.
- Boiler**
- If no adjustments are required for the boiler go to the next group.
- Note: 'DHW' and 'Heating Circuit 2 and 3' will not appear on the programming unit if not connected to the system.
- DHW**
- If changes are not required to set DHW temp. go to the next group.
- Heating Circuits 1, 2 and 3 (each circuit must be adjusted separately)
- If adjustments are not required go to the 'service menu'.
- Press □ to return to groups, press □ for 'service menu'
  - Using ▲▼, select 'Actuator test' and press OK.
  - Using ▲▼, select address 3A:2 and press OK.
  - Using ▲▼, select 'Actuator test', press □ for 'extended menu'.
  - Press □ to return to 'Actuator test'.
  - Using ▲▼, select address BB:0 and press OK.
  - Using ▲▼, select coding 9B: - (for set point temp.) and press OK.
- Extended Menu (after each change press □ to return to 'extended menu')
- To change display units from °C to °F, use ▲▼ to select 'settings'
- Using ▲▼, select 'temperature unit' and press OK.
  - Using ▲▼, select 'temperature unit' and press OK.
- To adjust the heating curve, use ▲▼ to select 'heating' and press OK.
- Using ▲▼, select 'heating circuit' and press OK.
  - Using ▲▼, select 'heating circuit', use ▲▼ to select 'slope' or 'shift' and press OK.
  - Using ▲▼, select 'heating curve' and press OK.
  - Using ▲▼, select 'heating curve' and press OK.
- To adjust room temperatures, use ▲▼ to select 'heating' and press OK.
- Using ▲▼, select 'heating circuit' and press OK.
  - Using ▲▼, select 'room temp. setpoint' and press OK.
  - Using ▲▼, select 'room temp. setpoint' and press OK.
  - Using ▲▼, select 'room temp. setpoint' and press OK.
- To adjust DHW temperature, use ▲▼ to select 'DHW' and press OK.
- Using ▲▼, select 'DHW temperature setpoint', and press OK.
  - Using ▲▼, select 'DHW temperature setpoint', and press OK.
- Select □ repeatedly to return to the home screen.

Information is subject to change without notice.

## Zone Control Wizard Setup

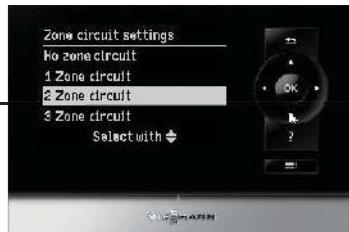

Select number of ZC circuits 1, 2 or 3

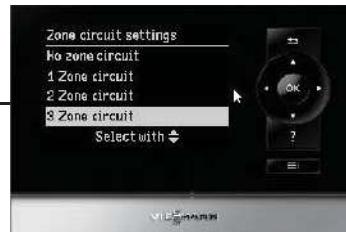

### System with 2 Zone Circuits

OR

### System with 3 Zone Circuits

OR

### Operational Screen Information

#### ZC Fixed Setpoint Configured

#### ZC Weather Compensated Configured

#### User Interface Details:

1. Indication of ZC circuit boiler is configured for ZC1/ZC2/ZC3 use arrows left or right to select.
2. Display will show  $\text{III}$  when a ZC call is present and a  $\text{O}$  symbol if ZC1/ZC2/ZC3 are configured with an associated pump output.
3. Display of actual boiler water temperature.
4. Flame indication when burner ON and will show % of modulation.
5. Target temperature of zone. The Fixed Setpoint will show the set temperature during configuration and Weather Compensated will show target based on slope and shift.
6. Outdoor temperature is shown when Weather Compensated ZC is configured.

# Extrol® Sizing

## Extrol EX Series Sizing

Boiler	Type of Radiation			
Net BTU Output (Thousands)	Finned Baseboard	Convector or Unit Heaters	Radiators Cast Iron	Baseboard Cast Iron
25	EX-15	EX-15	EX-15	EX-15
50	EX-15	EX-15	EX-30	EX-30
75	EX-30	EX-30	EX-30	EX-60
100	EX-30	EX-30	EX-60	EX-60
125	EX-30	EX-60	EX-60	EX-90
150	EX-30	EX-60	EX-90	EX-90
175	EX-60	EX-60	See SX Series	
200	EX-60	EX-90		
250	EX-90	EX-90		
300	EX-90			

Sizing based on: 12 PSIG fill; 30 PSIG relief valve; 180° F average temperature.  
For sizing with fluids other than water, visit [amtrol.com](#), download the AMTROL App or consult AMTROL Technical Support.

## Extrol SX Series Sizing

Boiler	Type of Radiation and Piping System

# Precise Sizing

## Precise Sizing of EXTROL® & RADIENT EXTROL™

### Things you must know:

1. Total System Volume .....(1) gallons
2. Minimum System Temperature .....(2) °F
3. Maximum System Temperature .....(3) °F
4. Minimum Operating Pressure at Expansion Tank .....(4) psig
5. Maximum Operating Pressure at Expansion Tank .....(5) psig

### Selection of Expansion Tank:

6. Find and enter "Net Expansion Factor" .....(6) (see table 1)
7. Amount of Expanded Water = line (1) x line (6) .....(7) gallon
8. Find and enter "Acceptance Factor" .....(8) (see table 2)
9. Minimum Total Tank Volume = line (7) ÷ line (8) .....(9) gallons
10. Using Specifications on pages 6 and 7, select an Expansion Tank that is at least equal to line (9) for "Total Volume" and line (7) for Max. Expanded Water Acceptance Gallons. Multiple tanks may be required.

Table 1. Net Expansion of Water

Max.Sys. Temp. °F	Minimum System Temperature °F							
	40°F	50°F	60°F	70°F	80°F	90°F	100°F	
60°F	.0005	.0049	—	—	—	—	—	—
70°F	.00149	.00143	.00094	—	—	—	—	—

# Series "HFT" Hydronic Heating Tanks

## DESCRIPTION

The Series HFT tank is designed to absorb the force of thermal expansion of heating water and to maintain proper pressurization in a closed hydronic system. The heavy duty butyl diaphragm separates system water from the air in the tank preventing water logging problems.

## OPERATING DATA

Maximum working pressure ..... 100 PSI (689kPa)  
Maximum operating temperature ..... 240°F (115°C)

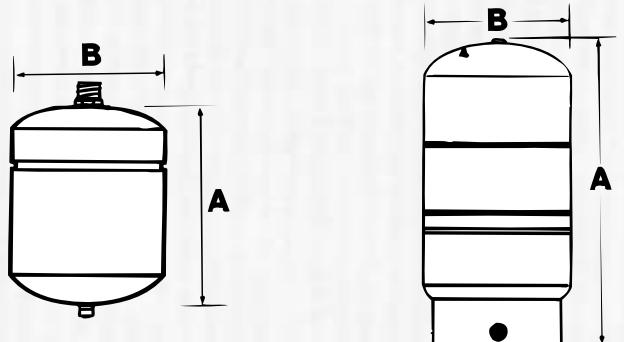

## MATERIALS OF CONSTRUCTION

Shell ..... Carbon Steel  
Diaphragm ..... Heavy Duty Butyl Rubber

Dimensions: Gallons (Ltrs.), Inches (mm), Weights: LBS. (KG)

## Terms & Conditions

### Equipment Requirements

Air source heat pumps must be listed on the air source heat pump qualified product list. MassSave.com/HQPL Integrated controls must be listed on the integrated control qualified product list. MassSave.com/ICQPL

**Application Form:** This application must be filled out completely, truthfully, and accurately. The customer must date and submit the completed application along with all required documentation for specific rebates and/or incentives. By submitting the rebate application, the customer agrees to abide by these Terms and Conditions.

**Time Limit:** Qualifying units for equipment rebate must be purchased and installed between January 1, 2022, and December 31, 2022. Applications must be postmarked by February 28, 2023 and within 60 days of installation. Program is subject to change without prior notice, including rebates and incentive levels.

**Payments:** From the time the application is processed and approved, please allow 6-8 weeks for payment of complete applications. Payment processing may be delayed if rebate application is missing required information. For customers that wish to designate their rebate payment directly to their contractor, contractors must first register with Mass Save. If contractors are not registered, and/or if the payee information is different from the account holder information, additional processing time will be needed for payee verification.

**Geographic Requirements:** Offers valid only for residential electric customers in Massachusetts where the Mass Save Electric Heating and Cooling Program is offered by Cape Light Compact, Eversource, National Grid and Utili

**Rebate Limitations:** This rebate may not be combined with any other utility or energy efficiency service provider offer for the same equipment. This does not apply to the HEAT Loan financing program. Other, non-Mass Save rebates or incentives may also be used. Rebate amount not to exceed the cost of equipment (excluding sales tax and all installation costs), and may be subject to change without notice. Equipment installed in new construction and additions is not eligible. This rebate is only available to residences that are occupied full time during the winter heating season

**Proof of Purchase:** A copy of the customer's invoice itemizing the purchased equipment must accompany each rebate application form. The invoice must indicate the equipment make, coil and condenser model numbers, size in tons, installation date and address, total install cost and proof of payment.

**Contractor Certification:** Contractor certifies that installation and services performed have been in accordance with all applicable municipal, state and federal codes, standards and regulations, as well as program requirements pertaining to the installed system.

**Approval and Verification:** The participating utility or energy efficiency service provider reserves the right to conduct field inspections to verify installations prior to payment.

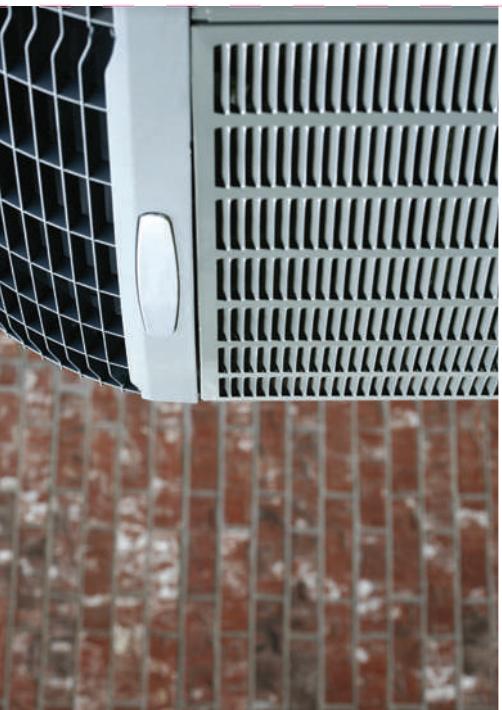

**Tax Liability:** Sponsors will not be responsible for any tax liability that may be imposed on the customer or contractor as a result of the payment of rebates.

**Endorsement:** Sponsors do not endorse any particular manufacturer, product, system design, or technology in promoting these offers.

**Limitation of Liability:** Sponsors and their rebate administrator's liability is limited to paying the rebate and incentive specified. Sponsors and their rebate administrator are not liable for any consequential or incidental damages or for any damages in tort connected with or resulting from participation in these offers.

**Warranties:** SPONSORS DO NOT WARRANT THE PERFORMANCE OF INSTALLED OR SERVICED EQUIPMENT, EXPRESSLY OR IMPLICITLY. Program sponsors make no warranties or representations of any kind, whether statutory, expressed, or implied, including, without limitation, warranties or merchantability or fitness for a particular purpose regarding the equipment or services provided by a manufacturer or vendor. Contact your contractor for details regarding equipment performance and warranties.

**Electric Benefits:** Other than the energy cost savings realized by customer, the program administrator is entitled to 100% of the benefits and rights associated with the energy-efficient measures, including without limitation ISO-NE products and all other attributes, credits or products associated therewith under any regional initiative or federal, state or local law, program or regulation or program, and customer waives, and agrees not to seek, any right to the same.

## 2022 residential air source heat pump rebate form

To receive your rebate faster, submit online at [MassSave.com/Rebates](http://MassSave.com/Rebates)

### Required documents

- Completed and signed rebate form
- Copy of your invoice within 60 days of installation from a licensed contractor attached, including:
  - Installer/Contractor Name & Address
  - Outdoor and Indoor Equipment Manufacturer and Model Numbers
  - Integrated Control Model Number(s)
  - Installation Date
  - Installation Address
  - Total Install Cost
- Proof of Payment

Completed and signed Whole Home verification form, if applying for Whole Home incentive

# 2022 residential air source heat pump rebates

## Air source heat pumps

Save with rebates on air source heat pumps purchased and installed between January 1, 2022, and December 31, 2022.

Offer only for heat pumps replacing or supplementing existing oil, propane, or electric baseboard (resistance). Rebate not to exceed purchase price. Limit one (1) Whole-Home rebate per home, maximum of \$10,000.

To view the complete Heat Pump Qualified Products List, please visit [MassSave.com/HPQPL](http://MassSave.com/HPQPL)

## Integrated controls

Integrated controls are required for homes using heat pumps to supplement an existing oil or propane heating system.

To view the complete Integrated Controls Qualified Products List, please visit [MassSave.com/IICQPL](http://MassSave.com/IICQPL)

## How It Works

- Prepare your home:** Receive a \$500 bonus when you move forward with weatherization recommendations made during a Home Energy Assessment prior to installing a heat pump. Learn more at [MassSave.com/EfficiencyFirst](http://MassSave.com/EfficiencyFirst)

- Work with a Mass Save® heat pump installer:** Each home and customer situation is unique. The Sponsors of Mass Save urge you to work closely with a qualified contractor who can design and install a heat pump system that will meet your home's heating and cooling needs. Find a qualified installer at [MassSave.com/FindAHeatPumpInstaller](http://MassSave.com/FindAHeatPumpInstaller)

- Consider financing:** Interested in 0% financing? Apply for a Mass Save HEAT Loan prior to installing your equipment. Learn more at [MassSave.com/HEATLoan](http://MassSave.com/HEATLoan)

- Claim your rebate:** Upon completion of installation, claim your rebate by submitting all required documentation.

**Online:**  
[MassSave.com/Rebates](http://MassSave.com/Rebates)

**Mail:**  
Mass Save Residential Heating & Cooling Program,  
P.O. Box 2528  
Manchester, CT 06045

Multiply total length of piping in ft. by gallons per foot multiplier.

This will give you total volume of liquid content in piping. Multiply by % of glycol desired to determine gallons of anti-freeze needed.

# Formulas

## Water

$$\text{BTU/h} = 500 \times \text{GPM} \Delta T$$

$C_v$  = flow in GPM @ 1PSI pressure drop

Ft of Head =  $2.31 \times \text{PSI}$

## Air

$$\text{Air changes/hr} = \text{CFM} \times 60 \text{ min} / \text{space volume ft}^3$$

CFM per ton = 400-450 standard 200-250 hi velocity

CFM = foot area ( $\text{ft}^2$ )x velocity (f/m)

$$\text{FR (friction rate)} = \frac{\text{ASP} \times 100}{\text{TEL}}$$

ASP = Available Static Pressure  
TEL = Total Equivalent Length duct

$$\text{BTU}_{\text{sensible}} = 1.08 \times \text{CFM} \times \Delta T$$

## Other

COP = Power output / power input

EER = Btu out cooling / Electrical Input

Efficiency (thermal)= Output / Input

## Electrical

1 KW = 3413 Btu

$E = I \times R$  E(volts) I(amps) R(ohm)

VA transformer sizing = Volts x Amps

1 HP = 746 Watts

## Temperature

Fahrenheit = Celsius x 1.8 + 32

Celsius = (Fahrenheit -32) / 1.8
