

JG John Guest®

Speedfit® Air Products

**COMPRESSED AIR SYSTEMS
PNEUMATIC FITTINGS
LLDPE TUBE
JANUARY 2016**

The John Guest Group has a long established reputation as a world leading manufacturer of push-fit fittings, tube and other fluid control products. A reputation built on producing consistently high quality products with an ongoing commitment to value engineering and product development.

Quality Manufacture

A commitment to quality is at the heart of the John Guest philosophy.

The strictest control is maintained by virtue of the fact that design and manufacture is carried out in modern purpose built manufacturing centres in west London and at Maidenhead in Berkshire.

Maintaining control over the whole process from initial tool design and tool making through to final assembly and testing ensuring that only products of the highest quality are produced.

The company believe it is this commitment to quality that has led to it receiving prestigious awards from many of the world's leading testing and approvals organisations.

John Guest is a preferred supplier to many international companies.

Contents

Compressed Air Pipe and Fittings

Compressed Air Products

A push-fit system of fittings and pipe which means a compressed air supply can be installed quickly and easily with much reduced production down time.

05 - 24

Pneumatic Fittings

Metric Size Fittings

Metric Size Fittings in 4 to 12mm sizes. Selected items have Superthread. A unique thread with integral seal suitable for 5 different thread forms.

25 - 40

Banjo Flow Controls

Banjo Flow Controls, compact envelope size and precise adjustment.

41 - 42

Miniature Fittings

Miniature Fittings, specially designed for miniature pneumatics applications.

43 - 44

Imperial Size Fittings

Inch Size Fittings in 5/32" to 1/2" sizes.

The easy to use push-fit system for Compressed Air

The John Guest range of push-fit fittings and pipe provide the ideal connection from compressor receiver to air line service components through to complete ring main and take off points. A compressed air system can be installed quickly and easily, compared with other installation methods, time savings of at least 50% are easily achievable.

No need to prepare threaded pipe or solvent, all the connections can be made with a simple push-fit action. The system is then immediately ready for use. Complex systems can be assembled much more rapidly than with traditional methods and because fittings are easy to disconnect, systems can be altered or extended with much reduced production down time.

The fittings are produced in either a tough engineering plastics material or in brass in sizes 12mm to 28mm. They are intended for use with John Guest nylon pipe but can also be used with copper or aluminium pipe.

- Installation time reduced by at least 50%
- **Safe, secure, leakproof**
- Easy to alter or extend a system
- Lightweight and easy to handle
- No corrosion, reduced maintenance

COMPRESSED AIR SYSTEM

Adaptors for galvanised,
see pages 17-18.

Complex systems easy to produce.

1. Cut pipe square

2. Push pipe into fitting

Speedfit® Air Products

3. Easy to use in confined spaces

4. Complex systems easy to achieve

5. System complete in 2 days

EASY TO MAKE A CONNECTION

The John Guest Push-fit Fitting has a collet (gripper) with stainless steel teeth which hold the pipe firmly in position and an 'O' ring to provide a permanent leak proof seal.

THREE EASY STEPS

Fittings and pipe should be kept clean and undamaged before use.

Cut the pipe square.

We recommend the use of the JG Pipe Cutter.

DO NOT use a hacksaw.

To avoid damage to the 'O' ring remove burrs and sharp edges.

Push up to pipe stop.

Pull to check secure.

Test the system before use.

To disconnect, ensure the system is depressurised. Push the collet towards the fitting and remove the pipe. The fitting can be reused.

28MM FITTINGS

28mm fittings also have a collet with stainless steel teeth and an 'O' ring.

After inserting the pipe, a screw cap is turned approx 1/4 turn. This locks the collet in place and reduces lateral and sideways movement of the pipe.

To disconnect, turn the screw cap 1/4 turn, push in the collet and remove the pipe. The fitting and pipe can be reused.

Nylon, Copper & Aluminium Pipe

Whilst we recommend the use of John Guest Rigid Nylon Pipe, John Guest Fittings can also be used with copper or aluminium pipe.

UNIQUE FEATURES

STEM ELBOW

Designed to simplify pipe connections in restricted spaces, the Stem Elbow gives an instant swivel fitting so a pipe can be orientated in any direction.

Can be used with an elbow to make 'U' turn connection.

Please note a collet cover cannot be used on a Speedfit end assembled with the stem of a 22mm Stem Elbow.

Can be used with a Tee.

WATER TRAP TEE

The new Water Trap Tee from John Guest solves the on-going problem of moisture in a compressed air system and provides the easy alternative to the need to install "Swan Necks".

The ingenious inside arrangement of the fitting allows air to flow, with minimum head loss, from the main to take-off point without allowing water to follow. The moisture is retained in the line to be drawn off at some suitable location.

Installation

It is of vital importance for the correct function of the Water Trap Tee that the air distribution system be nearly horizontal and that the outlet port be facing downwards.

Speedfit® Air Products

WATER TRAP TEE CONVERTOR

The Water Trap Tee Convertor is a simple convenient way of converting a standard John Guest 28mm Tee to a Water Trap Tee.

This will stop condensing water entering the vertical take off spur.

The air supply needs to be installed with the correct fall and water drain points regularly vented.

To Assemble

Use either John Guest 28mm Nylon Pipe or 28mm copper pipe. The pipe to be cut square and be free of burrs.

Press the shorter spigot into the pipe. The fit on copper pipe will be loose, this will not affect the function.

Push the pipe and convertor up to the pipe stop of the centre leg of the tee.

Turn the screw cap approx 1/4 turn to lock the pipe in position.

END STOP

The End Stop can be used to provide a permanent connection or a temporary shut off. Because it is easy to disconnect the fitting from the pipe, the End Stop can be put in place to be removed at a later date to allow a system to be extended or modified.

COMPRESSED AIR FITTINGS

A push-fit system of fittings and pipe which means a compressed air system can be installed quickly and easily with much reduced production down time. It is also easy to rearrange and extend a system.

For Pipe cutters see pages 59-60.

INSTALLING A SYSTEM

Thermoplastics have different properties to steel pipes and so different techniques need to be employed for the installation of the system. For example plastic pipe expands considerably more than metallic pipe, so the method of constraining the pipe needs to be suitable for this expansion to take place. If the pipe is constrained at both ends it will buckle and generate side loads and stress in the pipe. This can be alleviated by an expansion bend in the pipe work. Pipe should be able to slide through mounting brackets. Plastic pipe work is much lighter than that of steel pipe work and so the mountings do not need to be as robust and using John Guest connectors means that the system can be easily modified to any new requirements quickly and without significant specialist tools such as threading equipment and pipe benders. Using John Guest connectors means that no solvents or adhesives need to be employed in the installation. The coefficient of linear expansion of Rigid Nylon pipe is approximately 0.00012 metre per metre length per °C.

John Guest compressed air equipment is suitable to use above ground and below ground but we would strongly suggest that if it is installed below ground that it is installed in conduit so that the pipe can expand with temperature fluctuations and can easily be removed for service or maintenance. John Guest Ltd. would remind all persons involved with installation and service of compressed air systems that reference should be made to “Approved Code of Practice - Safety of Pressure Systems” available from HMSO in the United Kingdom. For installation in other countries, the appropriate Codes of Practice should apply.

On long pipe runs, it is advisable to install an expansion bend, as shown in the diagram.

Condensate and dirt in the system

It is always desirable to have clean dry air at the outlets of a compressed air system, as condensate and dirt will affect the performance and life of ancillary equipment. We would strongly recommend that a filter be fitted to the system to clean the air and that John Guest Water Trap Tees be used to trap any residue condensate and this should be taken to a “drain off” facility to extract it from the system.

When installing a compressed air system, it is advisable to first attach the horizontal pipe clips and only attach the clips to the vertical pipes after a small amount of pressure has been applied to the system. This will ensure that the vertical pipes have positioned themselves correctly before they are clipped.

Phase 1: System without pressure

Phase 2: System with pressure

When installing around a column or pillar, maintain a distance of approximately 10cm between the wall and the pipe. Always maintain a distance of 400mm between the fittings and the pipe clip.

Column/Pillar smaller than 1 metre

Column/Pillar larger than 1 metre

Note: All compressed air systems should be equipped with an air line water trap, we recommend our PMTT22E Water Trap Tee for this purpose (as shown on page 11 of this brochure).

TECHNICAL SPECIFICATION - COMPRESSED AIR SYSTEM

Working Temperature Range

Minimum Working Temperature -20°C

Maximum Working Temperature +70°C

The above is for use with air. For below 0°C

Please consult our Customer Service Department.

Working Pressure

The John Guest Compressed Air System is suitable for the following temperatures and pressures.

Temperature

+ 23°C

+ 70°C

Pressure

10 BAR

7 BAR

The above ratings are for air. For use with other fluids or at other temperatures and pressures please contact our Customer Service Department.

Pipe Types

John Guest fittings are intended for use with John Guest nylon pipe but are also suitable for use with a wide range of plastic and soft metal pipes including UPVC, ABS, Polyethylene, Nylon, mild steel and copper to the tolerances set out below. Soft plastic pipe, such as Nylon to have a minimum wall thickness of 1.5mm. The pipe must have a good quality surface and be damage free.

Pipe Tolerances

The John Guest fittings featured in this brochure are intended for pipes with outside diameters to the following tolerances.

Size

12mm to 28mm OD

Tolerance

+0.05 to -0.10mm OD

Maximum Torque Values

The following maximum torque values should be applied.

Size

3/8"

1/2"

3/4"

1"

Plastic threads

3.0Nm

3.0Nm

4.0Nm

4.0Nm

Metal threads

N/A

4.0Nm

5.0Nm

5.0Nm

It is recommended that all installations are checked prior to use to determine that a seal has been made. The maximum torque figures quoted for use with John Guest fittings are dependant on the mating thread conforming to the relevant British or International thread standard.

Do not over tighten plastic fittings as this could cause undue stress and eventual failure. Recommended torque figures are shown above and must be adhered to. John Guest recommend OEM Customers consider replacing threaded 'ports' with the modern method of using John Guest Cartridge Systems.

Material Specification

The fittings are made up of three components:

Bodies are produced in strong engineering plastic or in brass.

'O' Rings are Nitrile rubber.

Collets are produce in acetal copolymer with stainless steel teeth.

Applications

Pipe and fittings should be kept clean and undamaged before use. These products are designed for use with air. For other applications please contact our Customer Services Department.

The system is not recommended for use with explosive gases, petroleum spirits and other fuels or for central heating systems.

Installations - Our Recommendations

The pressure rating and installation guidelines of the tubing employed must also be considered during the design of compressed air system.

Pipe should be supported between 600mm to 800mm to prevent excessive laod being applied to the fitting(s). These supports should not be closer than 25mm from the end of the fitting.

John Guest fittings and pipe should only be connected after the air receiver and not direct to a compressor.

We recommend collet covers be fitted when pipework is hidden inside walls and ceilings.

It is recommended that all pipe and fittings installations are pressure tested after installation and before handing over to the final user.

Side Loads

John Guest products are not designed to be used whilst under side load as this may adversely affect their ability to function long-term. Always ensure tubes have good alignment with the fitting. They must also not be subjected to any form of impact or other damage, such as being hit or dropped, even accidentally. If fittings have damaged or suffered an impact, they should be replaced immediately. John Guest warranty does not cover loss caused by any form of damage.

Note: Aluminum pipe should NOT be connected direct to a compressor.

PNEUMATICS FITTINGS

Super Speedfit Push-in fittings have been specially designed for miniature pneumatics applications. They provide a fast and secure way of connecting tubes and offer considerable advantages over conventional fittings.

Complex tubing systems can be assembled more rapidly than with traditional methods and because Super Speedfit fittings are easy to disconnect, fault finding and maintenance become much easier operations.

They are particularly useful for development, testing or training programmes where systems may need to be constantly reconfigured.

To make a connection, the tube is simply pushed in by hand; the unique John Guest collet locking system holds the tube firmly in place without deforming it or restricting flow.

See easy to make a connection on page 09 - 10.

Technical Specification shown on pages 63 - 64.

Speedfit® Air Products

USER BENEFITS

- Specially designed for pneumatics
- Suitable for plastic and soft metal tubes
- Grips before it seals
- Quick disconnection and reusable
- No tools needed
- Quality Manufacturer - ISO 9001 listed since 1989
- Superior flow characteristics
- Collet cover prevents accidental disconnection and allows colour coding
- Fittings with prefix PM or PI are produced exclusively in Food and Drug Administration approved materials and are therefore recommended for food quality applications

Pneumatics

Metric Size Fittings

SuperThread

Selected metric size items have SuperThread, a unique thread seal developed by John Guest to enable male adaptors to be used with a variety of female thread forms. John Guest fittings with brass bodies incorporating the SuperThread can be used with BSP (Parallel), BSPT (Taper), NPTF, PF and PT metal thread forms.

The special Polyurethane seal feature means no sealant need be applied to make an airtight joint. There is no danger of tape entering the system.

Fittings with SuperThread also have countersunk throughbores to provide superior flow characteristics.

The design allows for a smaller compact body and reduced hexagon size.

Maximum Torque Values for SuperThread are shown on page 64.

SuperThread fits all these metal thread forms.

Banjo Flow Control

Banjo Flow Controls are designed for installation directly into cylinder ports to give precise control. They regulate the speed of pneumatic cylinders and other actuators.

John Guest Controls provide a neat compact assembly which can be orientated to a suitable position for the circuit arrangement prior to tightening.

The design offers especially precise adjustment through the control needle which is captive within its housing.

Suitable for both soft metal and plastic tubing.

Maximum Torque Values are shown on page 64.

Technical Specifications

Temperature Range 5°C - 70°C
Working Pressure Range 0.5 Bar to 10 Bar

ISO 1219-1 : 1991

Materials used

Acetal Copolymer, Brass, Stainless Steel and Nitrile.

Filtration

Air supply should be filtered to 50 micron.

Typical Response Curve

Response curve for Banjo Flow Control with Screwdriver slot.
 Pattern No. BFC360611E

1 scfm = 28.3 litres/min.
 or 28317 cc/min.
 @ 1 atmosphere discharge

Miniature Fittings

A new range of 4mm fittings especially designed for miniature pneumatics applications.

LM fittings are suitable for use with plastic (Polyethylene, Nylon and Polyurethane) and soft metal (copper and mild steel) tubes with an outside diameter of 4mm +0.05/ - 0.07. The tube to have a smooth outer surface and be free from burrs.

Tube inserts should be used for soft or thin wall tubing or when using Polyurethane tube above 10 Bar to a maximum of 16 Bar.

M3 and M5 threaded ends are designed to be hand tightened. They should not be tightened above the maximum torque figures shown on page 64 .

ACCESSORIES

COLLET COVERS

The slip-on Collet Cover shown in the illustration prevents accidental removal or tampering with tubing. Tubing can be inserted with the Collet Cover already attached to the fittings or the cover can slide into position afterwards. The cover is easily removed when required and comes in a variety of colours for colour coding.

LLDPE Tubing

John Guest Linear Low Density Polyethylene Tubing is suitable for a wide range of temperature and pressures, has a broad chemical compatibility and is made from non contaminating materials.

The tubing is suitable for pneumatics applications maximum pressure 10 Bar @ 20°C. At elevated temperatures, (50°C), mineral oil used in some systems will degrade LLDPE tube and therefore, LLDPE tube used in pneumatic circuits should be periodically checked and replaced if necessary.

Chemical Resistance

For use of LLDPE with chemicals or potentially aggressive liquids, please refer to our Technical Service Department.

NOTE: When using cleaning agents or other potentially aggressive liquids, please ensure compatibility with tubing and fittings. LLDPE is not recommended for mineral oils, gases and fuels or high pressure compressed air / pneumatic systems.

Exposure to Ultraviolet Light

Only black or blue tube should be installed in areas exposed to any light if biofilm growth is considered an issue. In this case other colours must be protected from exposure to light. Black tube is also UV stabilised and can be installed where exposed to direct sunlight (UV).

Tube Tolerances

1/4" to 1/2"	+0.001/-0.004
4mm	+0.05/-0.07mm
6mm to 12mm	+0.05/-0.10mm
15mm	+0.10/-0.10mm

Minimum Order Quantities

Popular items highlighted in red are generally in stock and available in minimum order quantities of 2 coils. Other items may be subject to a longer lead time and are available in minimum order quantities of 50 coils.

TECHNICAL SPECIFICATION -

Working Temperature Range (Air)

Minimum Working Temperature = -20°C

Maximum Working Temperature = +70°C

Also suitable for vacuum.

Working Pressure

Super Speedfit fittings are suitable for the following pressure.

Temperature	Size	
	4mm- 8mm 5/32" - 5/16"	10mm - 12mm 3/8" - 1/2"
- 20°C	16 Bar	10 Bar
+20°C	16 Bar	10 Bar
+65°C	10 Bar	7 Bar

The above ratings are for air when **Super Speedfit** fittings are used with John Guest Nylon Tube. For use with other fluids or other tube or at other temperatures and pressures, please consult our Customer Services Department.

Tube Types

Plastic Tube

Polyethylene, Nylon and Polyurethane conforming to the tolerances shown below. For soft tubing or thin wall tube we recommend the use of tube inserts.

The recommended minimum ID of Nylon tubes is shown in the table below.

Braided Tube

Use of Tube to Hose Stems and Elbows is essential when using braided tube. Use of clamps to retain braided tube on barbs is recommended.

Metal Tube (soft)

Brass, copper or mild steel conforming to the tolerances below.

Metal Tube (hard)

We do not recommend Super Speedfit Fittings for hard metal tubes.

It is essential that outside diameters be free from score marks and that the tube be deburred before inserting into the fitting.

Tube Tolerances

Super Speedfit fittings are offered for Nylon tube with the following dimensions:-

Size (Inches)	5/32 - 3/16	1/4 - 1/2
Tolerance (Inches)	+0.001 / -0.003	+0.001 / -0.004
Size (mm)	4mm - 5mm	6mm - 22mm
Tolerance (mm)	+0.05 / -0.07	+0.05 / -0.10

PNEUMATICS FITTINGS

Side Loads

John Guest products are not designed to be used whilst under side load as this may adversely affect their ability to function long-term. Always ensure tubes have good alignment with the fitting. They must also not be subjected to any form of impact or other damage, such as being hit or dropped, even accidentally. If fittings have damaged or suffered an impact, they should be replaced immediately. John Guest warranty does not cover loss caused by any form of damage.

Material Specifications

The fittings are made up of three components:

Bodies. Bodies are produced in an acetal copolymer engineering plastic, especially suitable for pneumatics and corrosion free applications. Selected bodies and body parts are brass.

'O' rings. Are Nitrile rubber.

Collets. Are produced in acetal copolymer with stainless steel teeth.

Chemicals

For use with chemicals or other potentially aggressive liquids, please refer to our Customer Services Department. In general, use only water or oil based paint. DO NOT ALLOW CONTACT WITH Cellulose based paint, paint thinners or strippers, solder flux or aggressive cleaners (see Cleaners and Sanitising). Keep away from ozone generators such as electric motors, mercury vapour lamps and high voltage electrical equipment. **Super Speedfit** fittings are not recommended for use with explosive gases, petroleum spirits, and other fuels or for central heating systems.

Installation and System Testing

Fittings and tube should be kept clean and undamaged before use. All tube and fittings installations must be pressure tested after installation to ensure system integrity before handing over to the final user. See also "Easy to make a connection" on page 09.

Maximum Torque Value in Nm

	M3	M5	1/8	1/4	3/8	1/2
Plastic Threads	-	-	1.5	1.5	3.0	3.0
Metal Threads						
LM Range	0.5	1.5	6.0	-	-	-
Superthread	-	-	6.0	10.0	10.0	10.0
Banjo Systems	-	-	6.0	10.0	10.0	10.0
Banjo Flow Controls	-	1.5	4.0	10.0	-	-
Metric threaded Fittings	-	0.7	-	-	-	-

A. It is recommended that all installations are checked prior to use to determine that a seal has been made.

B. The maximum torque figures quoted for the use with John Guest fittings are dependent on the mating thread conforming to the relevant British or international thread standard.

Do not over tighten plastic fittings as this could cause undue stress and eventual failure. Recommended torque figures are shown above and must be adhered to. John Guest recommend OEM Customers consider replacing threaded 'ports' with the modern method of using John Guest Cartridge Systems.

PRODUCT SELECTION AND INSTALLATION

John Guest fittings and related products are specifically designed and manufactured by John Guest to the Technical Specification set out in the John Guest Product Catalogues. All John Guest fittings and related products should be selected, installed, used and maintained in accordance with these Technical Specifications. It is the customer's / user's responsibility to ensure that John Guest fittings and related products are suitable for their intended applications, are properly installed and maintained and are used in accordance with the Technical Specifications. It is also the customer's / user's responsibility to provide it's own customers with any relevant technical information about John Guest products it supplies them. If you have any questions about our technical specifications, please contact us.

Maintenance and Replacement Intervals

John Guest products generally require little maintenance but as a minimum we recommend routine visual inspection. Frequency of visual inspection will depend on severity of application and risk of failure. If after visual inspection John Guest products appear to be damaged, cracked, charred, discoloured, heat distorted, corroded or leaking they should be replaced.

Product life is affected by the severity of the application, the hostility of the working environment, and contact with aggressive chemicals or liquids. It is therefore, important that specific replacement intervals be considered by specifiers/users/customers based on previous service life or when failure could result in unacceptable downtime, damage or injury risk.

The company has a policy of continuous research and development and reserves the right to amend without notice the specification and design of all products illustrated in this catalogue. John Guest reserve the right to change the colour and shape of products. Photographs are for illustration purposes only.

Speedfit® ***Air Products***

Cleaners and Sanitising Acetal Fittings

Our advice to customers is to use cleaners and sanitising agents that are above pH4 and low in hypochlorite level. Acetal fittings and parts that are cleaned and/or sanitised should be rinsed immediately with copious amounts of clean tap water to remove all traces of the cleaners. Details of which products are made from acetal are shown in our catalogues but generally John Guest products incorporating acetal are designated by the part number prefix PI, PM, CI, CM and RM. Polypropylene fittings offer greater resistance to aggressive chemicals than acetal fittings. Polypropylene does not have the same mechanical properties as acetal and John Guest polypropylene fittings are generally designated by the part number prefix PP. Our material suppliers recommend ECOLAB Oasis 133 as a suitable external cleaner for acetal products manufactured by John Guest.

Warranty

While we give a warranty against defects in manufacture or materials, it is the responsibility of the specifier to ensure that fittings and related products are suitable for their application. The installation must be carried out correctly in accordance with our recommendations, complying with recognised codes of practice and relevant national standards, and be properly maintained. Please refer to our terms and conditions of sale.
