Synthetic Single Jacket Mill Hose

A

Application

- Used in open end water discharge applications only; not intended for firefighting service

Feature

- Consult Dixon® for pricing and availability on 75' lengths and other threads and configurations

Materials

- Outer construction: single jacket, all polyester
- Tube construction: black, PVC rubber

Specifications

- Rated pressure: 250 PSI at ambient temperature 70°F (21°C)
- Working pressure: 112 PSI at ambient temperature 70°F (21°C)

Style V Swing Type Hose Storage Reels

Features

- Drum storage of collapsible hose prevents damaging kinks, allowing longer hose life
- Pivot mounting permits reel to swing to the proper angle preventing twists and kinks
- Open sides allow faster hose drying, to prevent mold and mildew
- Red polyester powder coat finish
- Wall mounting is standard; (2) wall mounting brackets included
- Style V5 (when used with 1-1/2" hose only), has a space between the reel sides to accommodate two widths of hose side by side, for maximum capacity in minimum space
- Replacement brackets - 1212-0930-4, (2) per set

Continuous Flow Reels

Features

- Allows immediate and continuous flow of water at all times during deployment of hose
- One-person operation
- Use with non-collapsible hose shown on page 10
- Powder coated with an electrostatically-applied, thermally-fused, red polyester finish steel drum
- Rims and universal mounting stand

Specification

- Female NPT inlet with male NST (NH) hose thread outlet

A flexible connector assembly must be installed directly between the hose reel inlet hub and the water supply. Failure to use the flexible connector assembly will void the warranty.

Fire Jacket for Hose

Application

- Used to protect hose and hose assemblies, tubing, piping, wiring and cables from high temperatures, direct flame, or molten splash

Features

- Helps maintain line temperature and reduce environmental overheating and overcooling
- Sleeving slides easily over hose and expands to go over fittings
- Resistant to hydraulic fluids and lubricating oil
- Iron oxide red color
- Supplied in 50' lengths
- Made in USA

Material

- Compounded silicone rubber coating over fiberglass

Specifications

- Temperature range: -65°F to 500°F (-54°C to 260°C)

Approvals

Setting Instructions

1. Determine desired outlet pressure for known inlet pressure.
2. Remove the tamper-resistant screw and slide the plastic cover up to access the adjusting nut.
3. Use a 3/8" diameter rod in any one of the six holes in the adjusting nut and rotate counter clockwise to increase the pressure at the outlet.
4. Check valve under pressure under static and under the anticipated flowing conditions to ascertain that the setting produces the expected results.

Adjustable Pressure Restricting Devices

Application

- For installation on Class I or Class III standpipe system hose outlets

Specification

- Working pressure: **175 PSI at 70°F (21°C)**

Feature

- Device restricts pressure in the piping system to such a degree that hose lines can be handled by persons untrained in the handling of heavy fire streams

Approvals

- New York City Board of Standards and Appeals, approval # MEA 54-07-E
- 2-1/2" UL listed, ULC approved

Domestic Adjustable Pressure Restricting Angle Valves

Application

- Used where flowing water pressure needs to be controlled

Features

- Restricting valve has no effect on the static pressure of a system
- Can be manually bypassed if required by opening the valve fully, this is accomplished by breaking the breakable link, which allows the valve stem to rise to the full open position
- Breakable link also serves as an indication of valve condition and status; if valve is opened without breaking the link it will resume its previous position and no resetting is necessary
- Restricts only under flow conditions
- Setting charts are packed with valve
- Aluminum handwheel
- Other configurations are available, contact Dixon® for additional information

Specifications

- Maximum operating pressure: up to **175 PSI**
- Preset orifices restrict the volume of water thereby lowering the pressure of the flowing water; NFPA requires restricting valves where inlet pressure exceeds **100 PSI**
- Restricts inlet pressure from **70 PSI** up to a maximum of **175 PSI**
- Restricts down to outlet pressures of **65, 80, or 100 PSI**, outlet pressures may be set below **65 PSI** when authorized by the local authority having jurisdiction

Global Adjustable Pressure Restricting Angle Valves

Application

- Used when flowing water pressure needs to be controlled

Features

- Restricting valve has no effect on the static pressure of a system
- Restricting device can be manually bypassed if required by opening the valve fully: pull the pin allowing the yoke to fall back from the valve stem, which allows valve to be fully opened. When valve needs to be restricted again, slide the yoke back into place to be NFPA compliant

Specification

- Preset orifices restrict the volume of water, thereby lowering the pressure of the flowing water; NFPA requires restricting valves where inlet pressure exceeds **100 PSI**

Backflow Preventer

Features

- Provides maximum protection against backflow caused by back-pressure or back-siphonage from a cross-connection wherein a contaminant hazard exists
- Consists of two spring-loaded poppet type check valves and a mechanically independent, hydraulically dependent pressure differential relief valve
- Three top-mounted test cocks ensure easy access during repair and maintenance
- Create a fire hydrant backflow preventer by using the RSMSA25F20T (page 61) and the DMH2025F (page 63)

Specifications

- Working pressure: to **175 PSIG**
- Temperature range: **33°F to 180°F (.5°C to 82°C)**

Identifying Threads

It is important to identify the threads required before ordering couplings.

Identifying threads can sometimes be the most difficult and frustrating part of coupling selection. However, without the right combination of threads, you may not provide a functional or safe connection.

The diameters, threads per inch (TvPI) and thread pitch, etc., are necessary to completely identify a thread. Ring, plug and GO/NOGO gauges are required to accurately gauge or identify threads. In the field, in the absence of these gauges, thread leaf gauges can be used to identify the "Threads Per Inch" (TPI) and the thread pitch. On threads you have determined to be straight threads, a caliper can be used to measure the "Outside Diameter of the Male" (ODM) or the "Inside Diameter of the Female" (IDF). A caliper can also be used to take measurements of tapered thread diameters. However, these are more difficult to define because of the taper. Fortunately, there are few tapered threads to deal with and these can usually be identified from the nominal ODM and the TPI.

However, identifying the thread may not fully identify what is needed in a mating fitting. The application is the primary limiting factor on the thread type used. Dixon® offers products with a wide variety of threads used with hose, pipe and hydraulics.

When attempting to choose a fitting, it is always advisable to first identify the thread to which it must connect. This may entail checking with a fitting or equipment manufacturer.

The fire hose thread specifications for some local municipal fire equipment and hydrants may vary according to local specifications. These can generally be most easily identified by contacting the local fire department responsible for the hydrant. The most common thread used on fire equipment is National Standard Thread (NST), also known as National Hose thread (NH).

When it is not possible to identify the thread:

- 1) Determine the number of threads per inch by measuring the distance from peak of thread to peak of thread across the largest number of whole threads. Then divide the number of threads by the measurement (This will provide the TPI).
- 2) Check to see if the thread is straight or tapered.
 - a) Straight Threads
Measure the "Outside Diameter of the Male" (ODM) or the "Inside Diameter of the Female" (IDF), from peak of thread to peak of thread.
 - b) Tapered Threads
Measure the "Outside Diameter of the Male" (ODM) at the large end and the small end, or the "Inside Diameter of the Female" (IDF) at the large end and the small end, from peak of thread to peak of thread. Then measure the Outside Diameter (OD) of the unthreaded pipe.

Once the application and these two pieces of information have been determined, the thread can generally be determined. When in doubt, contact the manufacturer.

Customer Thread Program

Many regions across North America have their own 'fire hose' thread, making procurement a difficult and time-consuming process. Dixon® can provide any special city thread configuration in brass within **one week**. Call for pricing and availability.

Frequently Asked Questions

- Q** - How do I order my customer's thread part?
A - Here is a sample part number with descriptions to help explain our numbering system: HA253.06x815F.

- Q** - Do I have to order a minimum quantity?
A - We will take orders of a single piece to thousands of pieces. The set-up fee will be amortized over the quantity.
- Q** - In what materials are customer thread adapters available?
A - We specialize in manufacturing brass adapters; however, the aluminum configurations will have various lead times.
- Q** - How can you supply brass customer thread adapters in one week's time?
A - We have tooling specifically designated for various threads, and we have castings standing by for machining, gauges for testing and hydro-static test facilities for testing. We are ready to delight the customer with the fastest lead time in the business on many popular configurations we build to stock.
- Q** - Do you have other products with customer threads?
A - Yes. We offer many products with region-specific threads, and many are shown in the catalog. If you don't see what you need, please let us know and we can possibly manufacture it.
- Q** - Can Dixon make custom threads?
A - Yes, if you are able to supply the maximum outside diameter measurement and the threads per inch, we will gladly make the products for you.

Fire Threads

Within North America there are many regional fire threads, the most popular being the "NST" (or "NH") thread, which is the predominant USA fire thread. The NST thread is sometimes used in Canada, especially in sizes 3" and larger.

Within Canada, the most common threads used for fire applications are:

- 1", 1-1/2" and 2" sizes use NPS (National Pipe Straight) thread
- 2-1/2" each region uses different threads; please see the table below
- 3" and larger - NST threads are often used

Before ordering, please confirm the type of thread required. Thread requirements vary by region.

NOTES:

1. Customer is requested to furnish as much information as possible to ensure delivery of the appropriate valve.
 2. Flow values for inlet static and residual pressure readings are needed for all types of valves (standpipe or sprinkler). Please provide a desired residual outlet pressure range.
 3. Styles available: 18-457, 18-458, 18-459.
 4. Sizes: 1-1/2" or 2-1/2" (18-459, 2-1/2" only).
 5. 'Actual' columns to be filled out by Dixon®. Actual valves given above have an accuracy of $\pm 10\%$.

Limited Warranty

DIXON VALVE AND COUPLING COMPANY, LLC (herein called "Dixon") warrants the products described herein and manufactured by Dixon to be free from defects in material and workmanship for a period of one (1) year from date of shipment by Dixon under normal use and service. Its sole obligation under this warranty being limited to repairing or replacing, as hereinafter provided, at its option any product found to Dixon's satisfaction to be defective upon examination by it, provided that such product shall be returned for inspection to Dixon's factory within three (3) months after discovery of the defect. The repair or replacement of defective products will be made without charge for parts or labor. This warranty shall not apply to: (a) parts or products not manufactured by Dixon, the warranty of such items being limited to the actual warranty extended to Dixon by its supplier; (b) any product that has been subject to abuse, negligence, accident, or misapplication; (c) any product altered or repaired by others than Dixon; and (d) to normal maintenance services and the replacement of service items (such as washers, gaskets, and lubricants) made in connection with such services. To the extent permitted by law, this limited warranty shall extend only to the buyer and any other person reasonably expected to use or consume the goods who is injured in person by any breach of the warranty. No action may be brought against Dixon for an alleged breach of warranty unless such action is instituted within one (1) year from the date the cause of action accrues. This limited warranty shall be construed and enforced to the fullest extent allowable by applicable law.

Other than the obligation of Dixon set forth herein, Dixon disclaims all warranties, express or implied, including but not limited to any implied warranties of merchantability or fitness for a particular purpose, and any other obligation or liability. The foregoing constitutes Dixon's sole obligation with respect to damages, whether direct, incidental, or consequential, resulting from the use or performance of the product.

Some products and sizes may be discontinued when stock is depleted or may require a minimum quantity for ordering.

About This Catalog and Our Products

This catalog is intended as a product offering. It is not a user or technical manual. Information in this catalog is subject to change without notice. We may modify product design and specification without notice and without any obligation to modify or substitute products previously purchased. All users and distributors of products sold through this catalog are strongly encouraged to contact Dixon with questions on use, compatibilities, coupling procedures, and life of product. Our full-time engineering and test staff are always available to recommend uses and to assist distributors and users with questions.

Safety

Safety logos, which appear throughout our catalog, are used as a reminder that the user should carefully review for the appropriateness of the product for the media, application, and environment in which it will be used.

NOTE: Because of the health hazards associated with contamination and lead content in drinking water systems, Dixon couplings, unless otherwise specifically approved, are not recommended for potable water service and should not be used in applications where drinking water will contact the wetted surfaces of the coupling.

All Dixon products are shipped in cartons with the following warning:

"WARNING: This product contains lead, a chemical known to the State of California to cause cancer and birth defects or other reproductive harm."

Trademarks
