THE ORIGINAL FLEXIBLE DOUBLE TEST PLUG

This unique, economical three-in-one plug is the ideal answer for quicker, easier, and more efficient testing. It does the work of three standard test plugs allowing you to drain the system before removing the plug, preventing blow-outs and water damage. The flexible spring bends to all practical angles, making it possible to effectively test from any type fitting.

This exclusive flexible double test plug is designed to slip smoothly in and out of the fitting. Each ball is expanded independently by turning individual handles. There are no wrenches, gauges, or pumps needed to provide a positive test. The flexible double test plug is available in lengths from 12" center to center through 96" center to center.

It is constructed of the finest quality materials available to give durable, dependable, long-lasting service . . . and is guaranteed for one year against

mechanical defects, but you can expect to perform hundreds of tests over years of service.

SINGLE FLEXIBLE TEST PLUG

This versatile plug provides a positive seal in normal, rough or uneven pipe. It's a mechanically operated plug with an expanding rubber ball at the end of a flexible spring and cable. (As the handle tightens, the rubber ball expands to seal the fitting completely.) In up to 8' lengths, it can get to places other plugs can't. And there's nothing to burst or rupture. Priced lower than similar plugs.

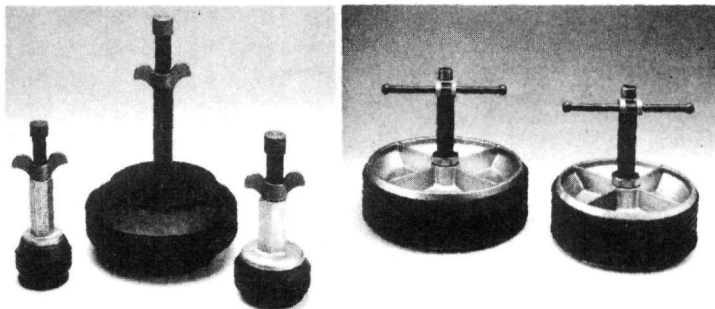

SINGLE TEST PLUGS

REGULAR SINGLE

These utility test plugs are easy to use in sealing a variety of pipes and fittings, or for testing. They are available in short or regular patterns, with handy wing nuts, in seven sizes from 1½" to 8". The short stem allows easier turning in pipe.

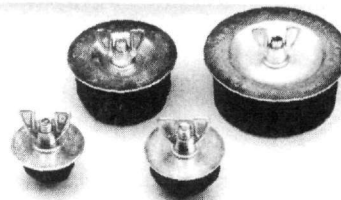

TEE HANDLE TYPE

This hefty tee handle style test plug is available in 8", 10" and 12" diameters, with a tee-type handle for easily expanding the molded rubber sealing ring. In all single test plugs, stems are hollow to allow filling or draining without removing plug.

DYNAMYTER/DOLLAR PLUG

Here's another simple, easy-to-use test plug with typical All American features: wing nut, expandable rubber sealing ring, and a variety of sizes, 1½" to 6".

COPPER TUBE TEST PLUG

For sealing and testing small diameter copper tubing from ¼" O.D. to 2½" O.D.
